

SUPERPROGRAMAS EM BASIC E LINGUAGEM MÁQUINA

Uma obra de indiscutível utilidade para todos aqueles que se interessam pela microinformática.

Através de um conjunto de conselhos, programas, jogos, rotinas em Basic e linguagem máquina para aplicação nos micros ZX Spectrum, 16/48 K, ZX Spectrum +, TC 2068, o leitor tem a possibilidade, de uma forma agradável, ampliar significativamente os seus conhecimentos sobre o funcionamento deste tipo de microcomputadores.

PREFÁCIO

Existindo no mercado, uma variada gama de livros de programas, não achamos que este venha a ser, apenas mais um. Isto devido à qualidade dos programas nele apresentados, que o leitor poderá constatar.

Nesta obra o leitor poderá se divertir com jogos e outros programas, que utilizam por vezes a Linguagem Máquina, tornando-os mais perfeitos e atraentes, possuindo características semelhantes aos comerciais.

Poderá também enriquecer os seus conhecimentos, de Basic e Linguagem Máquina, onde nesta última, os iniciados obterão uma grande ajuda.

Para aqueles que pretendem se divertir, com os programas de jogo, encontrarão completas explicações de como introduzi-los. Existindo vários programas desde, jogos para dois jogadores, até programas onde a rapidez de resposta do leitor, é posta à prova.

O leitor que não quiser somente se divertir, mas também ampliar os seus conhecimentos, encontrará várias rotinas que poderá usar nos seus programas.

Esperamos que esta obra lhe seja de maior utilidade, quer para se divertir, como para ampliar os seus conhecimentos.

Marco Paulo dos Santos Carrasco
Rui Manuel dos Prazeres Tito

CAPÍTULO 1

Como introduzir os programas

Iremos neste Capítulo, esclarecer certas dúvidas, que o leitor possa possuir, quanto à introdução dos programas, que constituem esta obra.

Achamos que não deverá existir, qualquer problema de maior, na entrada dos programas, bastando o leitor seguir rigorosamente as operações que se seguem.

Operações a realizar para a entrada de um programa.

1 — Introduzir o programa em Basic.

2 — Gravá-lo em seguida, usando a informação, que se segue ao texto de introdução ao programa. No caso de possuir duas instruções de **SAVE** usará a primeira, que é a destinada, à gravação do Basic.

Estas são as operações que terá que seguir para introduzir o gravar, qualquer programa. No entanto, acontece que muitos dos programas, são acompanhados de mais uma listagem, além da do Basic. Sendo esta, uma listagem de hexadecimais, que constitui a Linguagem Máquina do programa.

A segunda listagem será introduzida, por um programa em Basic, que iremos descrever mais adiante no 2.º Capítulo (Carregador de hexadecimais). Continuaremos então, as operações necessárias para terminar de introduzir um programa, que seja também constituído por Linguagem Máquina.

Se o programa que estiver a introduzir, só ser escrito em Basic, isto é não possuir listagem de hexadecimais, deverá passar para a 6.ª operação.

3 — Depois de gravado o Basic, deverá limpar a memória, usando a instrução **NEW**.

4 — Introduza agora o programa Carregador de hexadecimais, que se encontra, no 2.º Capítulo, que lhe irá servir para carregar na memória, os códigos hexadecimais, que constituem a Linguagem Máquina. Este programa encontra-se acompanhado de todas as informações necessárias, para a introdução dos códigos hexadecimais.

5 — Quando terminar de introduzir os códigos, deverá gravá-los, a seguir a gravação que fez do Basic, usando a segunda instrução do **SAVE**, que acompanha a introdução ao programa.

6 — Se tudo tiver sido feito correctamente, basta agora rebobinar a cassete, ao princípio e usar a instrução normal para carregar programas (**LOAD""**).

7 — Verifique depois de receber o programa da cassete, se este funciona. No caso de não funcionar, é devido a que não o deve ter introduzido correctamente, devendo tentar corrigir os erros. Assim que encontrar os erros, grave o programa, da mesma forma que o fez anteriormente.

CAPÍTULO 2

PROGRAMAS ÚTEIS

Qualquer programador ou utente de microcomputadores, tem necessidade de utilizar, certos programas, que lhe são indispensáveis.

Descreveremos vários programas, que lhe serão úteis, desde um programa para introduzir hexadecimais, até um examinador de programas.

Neste Capítulo estão incluídos os seguintes programas:

- Carregador de Hexadecimais
- Gerador de Hexadecimais
- Desenhador
- Construtor de Gráficos
- Super Letras
- Examinador

CARREGADOR DE HEXADECIMAIS

A utilidade deste programa consiste, como já foi mencionado no 1.º Capítulo, na capacidade que ele possui, para introduzir e colocar os códigos hexadecimais, na memória.

Se o leitor pretende usar este livro a 100%, este programa será muito utilizado, pois os melhores programas, estão escritos em Linguagem Máquina. Sendo necessário para a introduzir, o uso constante deste programa. Por este motivo, deverá guardar este programa numa casete à parte, para que sempre que dele necessite, não o tenha que introduzir novamente.

FUNCIONAMENTO DO PROGRAMA

As listagens da Linguagem Máquina são constituídas, por três colunas:

- A primeira coluna indica o endereço da memória, onde são introduzidos os códigos hexadecimais.
- A segunda indica os códigos hexadecimais.
- A terceira coluna é constituída pelo total da soma dos códigos hexadecimais, e tem como função verificar se os códigos foram bem introduzidos.

Quando o programa é corrido (RUN), este lhe pedirá para entrar o endereço inicial, servindo este para indicar ao programa, onde deve começar a introduzir os códigos hexadecimais no endereço que deve introduzir: é o primeiro valor da 1.ª coluna da listagem de hexadecimais. Em seguida o programa lhe pedirá que introduza o endereço final, sendo este o último valor da mesma coluna. Depois desta operação, não necessitará de se preocupar mais com a primeira coluna, pois o programa daqui em diante, gerará ele próprio os

endereços onde são introduzidos os códigos. O programa está agora pronto para receber os códigos, que se encontram na 2.ª coluna e que são introduzidos linha por linha. Deverá introduzir a primeira linha da 2.ª coluna. Em seguida terá que entrar o total, que se encontra na mesma linha, mas na 3.ª coluna. O programa verificará se o total introduzido, corresponde efectivamente à soma dos códigos introduzidos, e só se estiver tudo correcto, o programa colocará os códigos na memória. Caso contrário uma mensagem de erro é produzida, e terá que entrar novamente a linha de códigos que errou.

GERADOR DE HEXADECIMAIS

A utilidade deste programa reside, na possibilidade de criar listagens de hexadecimais, como aquelas que se encontram neste livro.

O leitor que, por algum motivo desejar produzir uma listagem de hexadecimal, deverá quando correr o programa, possuir a impressora ligada ao computador. O programa depois de corrido, pede-lhe que entre o endereço inicial e final, que indicará ao programa, a partir de que endereço da memória, deverá começar e terminar a listagem.

Sempre que usar este programa para produzir uma listagem, terá que usar o programa CARREGADOR DE HEXADECIMAIS para entrar os códigos da listagem.

DESENHADOR

Este programa vai dar-lhe a possibilidade de desenhar **SCREENS** (imagens do écran), com muito mais rapidez.

O programa é capaz de construir circunferências, linhas e até retângulos.

É de notar que alguns dos **SCREENS** que se encontram neste livro foram feitos com a ajuda deste programa.

TECLAS DO DESENHADOR

Movimento do cursor A

O — Esquerda
P — Direita
Q — Subir
A — Descer

Movimento do cursor B

5 — Esquerda
8 — Direita
7 — Subir
6 — Descer

Outras funções:

W — Desenha uma linha do cursor **A** ao cursor **B**.

R — Coloca o programa no modo **OVER 1** ou **OVER 0**.

U — Constrói um retângulo em que os cursores **A** e **B** são vértices diagonalmente opostos.

C — Desenha uma circunferência utilizando o cursor **A** como ponto sobre a circunferência e o cursor **B** como centro.

L — Dá entrada ao passo a ser efectuado pelos cursores.

1 — Move o cursor **A** para as coordenadas do cursor **B**.

2 — Limpa o ecrã.

3 — Guarda o **SCREENS** na cassete.

CONSTRUTOR DE GRÁFICOS

Um programa de extrema utilidade, que irá ajudá-lo a construir os seus gráficos com bastante facilidade.

Servindo-se de uma grelha de 8x8 bits, e de um cursor, você poderá construir o gráfico, e vê-lo ao mesmo tempo no seu tamanho normal. Além disso o programa indicar-lhe-á, os números correspondentes ao gráfico, caso queira utilizá-lo noutro programa.

O programa também grava automaticamente os gráficos, bastando apenas carregar na tecla indicada.

NOTA:

AS LETRAS QUE SE ENCONTRAM NA
LINHA 160 SAO EM MODO GRAFICO

SUPER LETRAS

Em muitos microcomputadores pode-se encontrar, uma variada gama de tipos de letras. No entanto nos micros a que este livro se destina, estes só possuem um tipo de letra.

Vamos apresentar aqui, um programa que gera letras com o dobro da altura, que está acostumado a presenciar.

Poderá utilizar este programa integrado no seu programa (como nós fizemos no Capítulo 4, no programa COMBATE) ou utilizá-lo só para produzir SCREEN\$, ou seja imagens de écran. Servindo também para o título de um texto que pretenda efectuar.

[illegible]

EXAMINADOR

Programa de muita utilidade, para examinar os programas, que se pretendem duplicar ou que se necessite de conhecer mais sobre estes, além do simples nome.

O programa depois de ser corrido (**RUN**), fica procurando um programa para examinar (**LOAD**), assim que encontre um programa na cassette, este indicará ao nosso programa o seu nome, comprimento, endereço inicial e de que tipo se trata.

Não sendo possível conhecer, toda esta informação com o simples carregar do programa, reside aqui a utilidade deste Examinador de Programas.

Gravacão .

CAPÍTULO 3

SUPER JOGOS PARA DOIS JOGADORES

Neste Capítulo, iremos apresentar alguns exemplos de jogos para dois jogadores.

Estes jogos são bastante divertidos, pois o adversário, deixa de ser a máquina, para ser um humano.

Com estes jogos você e os seus amigos, poderão desfrutar de momentos bastante divertidos, onde a competição, está presente, para decidir o vencedor.

O Capítulo é constituído por três programas:

Duelo

Abismo

Karting 2000

DUELO

Um jogo em que você defronta um amigo seu, para um duelo até à morte.

Neste duelo você e o seu adversário, estão equipados com Lasers nos discos voadores, que servem de suporte, para o combate.

Durante um período de tempo, tente acertar o mais vezes possível no seu adversário, do que ele em si. Para que consiga assim vencer o duelo.

BOA SORTE

KARTING 2000

Resolveu participar numa corrida de karting, competindo com um amigo seu.

Trata-se de uma corrida onde a velocidade domina, por esse motivo, as pistas são separadas, para que nenhum dos participantes perturbe a corrida do adversário. Mas para não tirar a emoção da corrida, os pilotos partem ao mesmo tempo.

Podrá combinar com o seu adversário, o número de voltas pretendido, dependendo deste, a dureza da prova.

Espere pela luz verde e,

CAPÍTULO 4

SUPER JOGOS

Vamos agora apresentar diversos jogos, para um único jogador. Este tipo de jogo pode ser bastante divertido se o leitor o considerar como um desafio às suas capacidades.

Alguns programas são um pouco extensos, mas depois de introduzidos, verá que compensou o trabalho dispendido.

É apresentada uma variada gama de jogos, para que o leitor possa encontrar o seu favorito.

Os programas que acompanham este Capítulo são:

Pesquisador

Turbo

Lagarta

Invasão Chinha

Monstros

Perigo!!!

Combate

Zig Zag

PESQUISADOR

As fontes de minerais da Terra esgotaram-se, só existe uma solução: e todos procuram a sorte no vasto Universo.

Você é mais sortudo que os seus competidores, encontrou o que procurava. Terá somente que recolher os minerais do vasto Universo, evitando os obstáculos que neste se encontram.

A sua nave trata-se do Pesquisador MT, equipado com potentes reactores. Possui assim tudo para ser bem sucedido no seu objectivo.

INVASÃO CHINHA

Os Chinhas são extraterrestres, provenientes de outro sistema solar.

O sistema solar dos Chinhas, encontra-se à beira da destruição, isto devido às grandes aglomerações de lixo, que os planetas possuem. É portanto por este motivo, que os Chinhas, como não suportam a atmosfera dos planetas do nosso sistema, enviaram um poderoso exército de autômatos, para dominar o nosso sistema, e fazer dele o depósito de detritos, do sistema dos Chinhas.

A sua missão será, como já deve calcular, de impedir que o exército enviado pelos Chinhas, venha a dominar o nosso planeta.

Os autômatos atacam primeiro com as forças menores que possuem. A medida que os vai destruindo, eles enviarão esquadrões, cada vez mais potentes.

Você encontra-se sobre um escudo terrestre, tentando evitar que o destruam, pois caso isso aconteça, terão o caminho livre, para dominar a Terra.

As armas que possui são: um escudo que somente pode ser activado de tempo a tempo, e um Laser que utilizará para neutralizar o inimigo.

Os autômatos estão programados, podendo por vezes estes atacar dois em dois, o que irá dificultar a sua tarefa, na medida que será mais difícil derrotá-los.

MONSTROS 48K

Motou-se numa aventura, que não lhe correu muito bem, e aqui está o resultado.

Encontra-se fechado num castelo enfeitado por uma bruxa, que o obriga a apanhar os seus diamantes, espalhados pelo seu castelo.

A bruxa possui três monstros de estimação que não simpatizam muito consigo, e que tudo farão para lhe dificultar o seu trabalho. Mas não é assim tão má bruxa, contando com a antipatia dos seus monstros, ofereceu-lhe uma arma enfeitada, que não mata os monstros, mas que alivia a situação, transportando-os para outro compartimento do castelo.

Trabalhe o melhor que possa e talvez a bruxa lhe dê a liberdade.

BOA SORTE

Sendo o responsável por uma máquina, que assegura o abastecimento de alimentos, a uma mina. Você tem que apanhar as embalagens de comida, que descem pela mina, para cumprir a sua missão. Quando apanhar sete embalagens, é feita a distribuição e receberá os respectivos pontos.

Não deixe o tempo chegar a zero, pois a vida dos mineiros encontra-se em PERIGO.

CAPÍTULO 5

EFEITOS ESPECIAIS

Vamos neste Capítulo, descrever algumas rotinas, que servirão para melhorar a qualidade e apresentação dos seus programas.

Um efeito torna-se mais atraente se possuir, algo que não se esteja acostumado a presenciar.

Iremos assim vos fornecer, várias rotinas muito pequenas, que podem ser usadas sem complicações de maior, nos seus próprios programas.

As rotinas são escritas em Linguagem Máquina, mas estão inseridas num programa em Basic, para que o leitor as introduza com maior facilidade.

Acompanha a listagem de Basic, uma listagem de Assembly, que dará ao leitor a possibilidade de seguir a rotina passo a passo, tentando compreender o seu funcionamento.

Quanto à gravação, todos os efeitos poderão ser gravados da mesma forma: **SAVE "Nome do Efeito" LINE 0.**

CAPÍTULO 6

SUPER ROTINAS EM LINGUAGEM MÁQUINA

A inserção deste Capítulo, deve-se ao facto de muitos dos principiantes encontrarem uma certa dificuldade, em realizarem os seus programas em Linguagem Máquina. Devendo-se à necessidade de certas rotinas primárias, que por serem tão usadas, necessitam ser o mais reduzidas possível, e ainda a extrema rapidez de execução, que estas deverão possuir. Estas rotinas serão dificilmente feitas por um principiante, sem prática e domínio sobre Assembler.

O leitor que esteja interessado em Linguagem Máquina, deverá aprender todas as instruções da Linguagem Assembler, usando um programa próprio para introduzir Assembler, que lhe irá compilar esta linguagem em Linguagem Máquina.

As rotinas encontram-se apresentadas num programa em Basic, que irá depois de corrido, introduzir o código máquina na memória. Juntamos uma listagem de Assembler, para uma maior compreensão da rotina, por parte do leitor, como também pelo motivo, de o leitor pretender introduzir a rotina, directamente num programa Assembler.

O leitor poderá por conseguinte, usar estas rotinas nos seus programas, com grande facilidade.

Aconselhamos ao leitor, que estiver mesmo interessado em Linguagem Máquina, que adquira um livro que explique todas as instruções Assembler, como também um bom programa, para introduzir os seus programas, e para compilar a Linguagem Assembler em Linguagem Máquina.

PLOT

Através desta rotina o leitor, poderá colocar pontos no écran. As coordenadas do ponto (256x176), a ser colocado no écran, deverão ser carregadas no registo **BC** e só depois executar a rotina.

ATTR

Para umas coordenadas carregadas no registro **BC**, o programa retorna com o respectivo endereço do **ATTRIBUTE FILE**, carregado no registro **HL**.

Desta forma o leitor poderá colocar ou retirar valores do **ATTRIBUTE FILE**.

Esta rotina permite-lhe calcular o endereço de um pixel, dado por coordenadas em alta resolução. O registo **BC** é carregado com as coordenadas (256×176). O registo **HL**, depois de ser corrido o programa, ficará com o endereço do byte, que contém o pixel, e o registo **A**, com o bit do byte correspondente ao pixel.
