PROSTICK II™
OPERATING INSTRUCTIONS

INSTALLATION:

The PROSTICK II™ is designed for use with the ATARI® 2600™, ATARI® 400/800 Home Computers™, Sears Arcade Game™, and the Commodore™ VIC-20™ and 64™ Home Computers™.Simply plug the PROSTICK II™ 9-pin connector into the controller port of your video-game//computer console. In addition, the PROSTICK II™ can be used with many other video-games and computers by purchasing the appropriate PROSTICK™ adapter (see accessories).

OPERATION:

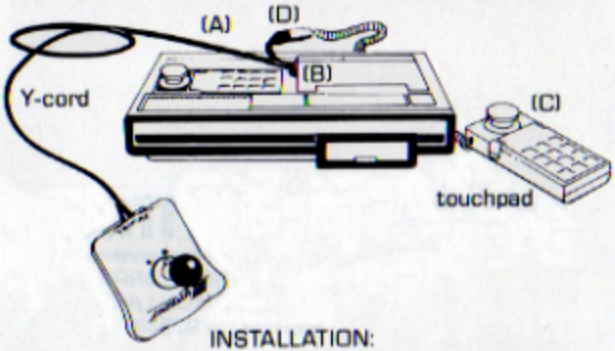

The PROSTICK II™ is a hand-held joystick allowing either left or right hand play. The firing buttons are located at the top end to take advantage of the superior index finger dexterity — improving reaction time and reducing fatigue during extended play.

The unique 4-way/8-way Switchable Gateplate™ gives you new flexibility. Selecting the 4-way setting allows only horizontal and vertical motion — dramatically improving response for maze-type games (Pac-man™, Donkey-Kong™, etc.). The 8-way setting offers the regular precise 8 position action.

TO SELECT A SETTING:

Lift the indicator ring away from the face of the unit toward the ball handle. Then firmly re-insert the indicator ring with the arrow aligned toward the 4 or 8.

PROSTICK III™
OPERATING INSTRUCTIONS

INSTALLATION:

The PROSTICK III™ is designed for use with your COLECOVISION™ videogame. Simply plug the PROSTICK III™ Y-cord (A) into the controller port of the game console (B). Then plug the original equipment joystick (with touchpad (C)) into the short lead (D) of the Y-cord. You can now use the PROSTICK III™ joystick for better control along with the touchpad for selection of start, reset, and degree of difficulty.

OPERATION:

The Tri-Fire™ bar is an exclusive PROSTICK III™ feature with two distinct firing functions for COLECOVISION™. Depressing the left side of the bar activates one firing function; depressing the right side of the bar activates the other; depressing the center of the bar activates both firing functions simultaneously.

The PROSTICK III™ also comes equipped with the unique NEWPORT CONTROLS® 4-way/8-way Switchable Gateplate™. The Switchable Gateplate™ gives you new flexibility. Selecting the 4-way setting allows only horizontal and vertical motion — dramatically improving response for maze-type games (Pac-man™, Donkey-Kong™, etc.). The 8-way setting offers the regular precise 8 position action.

TO SELECT A SETTING:

Lift the indicator ring away from the face of the unit toward the ball handle. Then firmly re-insert the indicator ring with the arrow aligned toward the 4 or 8.
