

# SCO LYRIX RELEASE 6.0

## WORD PROCESSING FOR ALL BUSINESS REQUIREMENTS

- ▶ *Interactive Editing and On-Screen Formatting*
- ▶ *Sophisticated Linguistic Tools: Spelling, Thesaurus, and Hyphenation*
- ▶ *High-Quality Output: Proportional Printing, Line Draw and Graphics*
- ▶ *Easy to Learn and Use Menu Interface*
- ▶ *Data Integration*

**SCO**<sup>™</sup> Lyrix<sup>®</sup> is designed specifically to complement XENIX<sup>®</sup> and UNIX<sup>®</sup> Systems, the new release—SCO Lyrix 6.0—is better than ever. New features, including proportional printing with multiple fonts, a thesaurus, line drawing, and split-screen windows make SCO Lyrix the word processing system of choice for all your business requirements. For memos, business letters, personalized mailings, documentation, and reports—whatever your word processing applications—SCO Lyrix is the word processing system you need.

### *Interactive Editing and On-Screen Formatting*

SCO Lyrix's interactive editing and on-screen formatting capabilities simplify document processing. A powerful marking feature lets you

quickly delete, copy, and highlight sections of text by character, word, phrase, sentence, paragraph, or page. Global Find and Replace lets you make corrections one at a time or throughout the entire document. The Library feature provides a convenient way to quickly insert boilerplate text into your current document.

Visible rulers control margins, tabs, and line justification. Multiple rulers can be stored in a single document. The Page Layout Menu lets you control style features like headers and footers, footnotes, page size, and font selection. Centering, boldface, and underlining are indicated on the screen. Page breaks are shown and adjusted to prevent "widow" and "orphan" lines. If you want to hyphenate your document, correct hyphenation points are suggested based on the right margin. And a line drawing feature enables you to create lines and boxes with the arrow keys.

### *Sophisticated Linguistic Tools: Spelling, Thesaurus and Hyphenation*

SCO Lyrix contains an 80,000-word, phonetically encoded spelling dictionary—the Proximity<sup>®</sup> I Merriam-Webster Linguibase<sup>™</sup>—that pinpoints possible misspellings, provides a list of suggested corrections, and then inserts the correct spelling. The local dictionary can be easily updated to include terms specific to your industry or locale. Medical and Legal Dictionary Supplements are also available. Choose the Thesaurus function to list synonyms which can automatically be placed within the text.

SCO Lyrix offers a flexible, automatic hyphenation system. Hyphenation can be performed at once or interactively, and on either selected portions or all of your document.

### *High-Quality Output: Proportional Printing, Line Draw and Graphics*

SCO Lyrix offers a variety of printing options to improve the appearance of your documents—and the impression you will make on your read-

ers. Select fixed-pitch proportional printing in a variety of font styles. Graphics can be merged into your document. Table of Contents and Index files can be generated at print time. SCO Lyrix supports type-through, local, and spooled printing. Printing can be selected from within a document or from the Print Menu.

### **Easy to Learn and Use Menu Interface**

Even first-time users can quickly become proficient with SCO Lyrix. The convenient SCO command menu interface—the same customer-proven interface used in other SCO applications—prompts you through the powerful Lyrix commands. Experienced users can type ahead without waiting for the prompts. If you do require assistance, you can request context-sensitive Help to receive a message about that function. To simplify editing, ten standard function keys provide access to the most common SCO Lyrix commands. For further assistance, the handy SCO Lyrix Quick Access Guide and comprehensive documentation provide complete instruction.

### **Data Integration**

As a member of the SCO Portfolio™ family, SCO Lyrix offers the SCO Portfolio/Manager™ clipboard, which gives you the ability to conveniently cut and paste data between SCO Portfolio applications. Parts of spreadsheets, graphics, e-mail and other output from SCO Portfolio applications can be easily included in SCO Lyrix documents. You can execute SQL queries to an SCO Integra™ database and import the results directly into an SCO Lyrix document. Graphs can be previewed using SCO Lyrix's Preview command.

### **Product Features**

#### ▶ **Key Editing Capabilities**

Copy and Paste  
Global Find and Replace  
Undo  
Library for Boilerplate Text  
Automatic Paragraph and Page Numbering  
Tabs: Regular, Indent, Right Align, Decimal, and Center
