Ifyou're enthusiastic about microcomputing, sooner or later you'll ask yourself the question ... "where do I go from here?"

## How BASICARE bulld into a

 micro wath liln y true if you own a micro with limited expansion and hardware penipheral options . . . like

Nowyour question can be answered in three

BASICARE MICRO
BASICARE are the irventors, developers and manufacturers of a totally
unique microcomputing upgrade system. It's the sort of system others have dreamed about . . . a series of separate modules that mempour
that simply (and firmly) stack together
Ifyou're confused ... don't be . . you only have to think of it in terms of the way Hi-fi equipment has evolved.

You buy the hardware you want and add to the systeml Each module may have a separate function or integrate functions. And when you want more . . you add morel

In short you can develop a whole range of hardware options that fit together to form a complete package ... "Computing" in the real sense of the wordt

## And what a package!

Apart from it's good looks and stability under working conditions, BASICARE MICRO SYSTEMS offers a fantastic range of micro options for ZX81 users.

Of course, such a system needs a starting point from which to expand. The heart of BASICARE'S system is a unique computer interface which we call PERSONA
This one unit simply plugs into your ZX81 without modification and acts as the "brains" of the whole operation.
Thereafter you choose how you want to expand your micro by simply plugging-in more modules.

Look at the choice you have:
PERSONA - An interface module to enable an ORGANIC
MICRO to grow on the $\triangle \times 8$ I
MINIMAP - A memory mapping device to extend the address space of the
2X81 from 64 K bytes to 1 M bytes.
RAM 08 - A low cost, low power memory expandable from 2 K to 8 K
RAM 16-16K Add on memory at remarkably low cost
RAM 64 - A TRUE 64 K Add on memory.
DROM - Ulira low power memory backed by rechargeable battery for nonvolatile storage of programs and data.
TOOLKIT - A module fully socketed to take up to 8K byes of utilites in
EPROM/ROM.
PERICON a - A general pupose, user programmable device providing 24 lines
of inpui/outpur,
PERICON b - 24 lines of heary duty output to access and control the outside
PERICON c-A Amodule to drive 80 column printer with
as ipace is ilmited to Centronics type paraliel interface
USERFONT Option - User cefinaticc harctes wallatle have produducts, we for RAM OS DROM and TOOIKI -

Of course, there's lots more BASIC ARE Modules under development includingjoysticks, EPROM Programmer Floppy Disc Controller and much more. BASICARE is the sort of system that GROWS when you grow ... and remember when you change your micro, you will be able to change to a PERSONA unit to suit your new equipmentl

In short, BASICARE will serve you forever . . . no matter
send for is today
how big you want to grow!

Name.

# Same game, different rules 

IF THE CALL for a year's ban on imports of micros is agreed by the Government, it will have a dramatic effect on the home computing market. No longer would there be the present choice for the growing thousands wishing to upgrade their computing capabilities, having had their appetites whetted by the ZX-81.

An increase in the size of the market, similar to that achieved last year, would mean tens of thousands of people chasing the limited numbers which would be available from the producers in Britain. Any extra

growth and the Spectrum delays of last year would seem to be short by comparison.

Consider a situation in which there would be no Apples, Commodores or any of the theoretical Japanese invasion. Despite the growing numbers of British machines, it is unlikely that they would be able to cope with the orders.

Having said that, it is easy to understand why British micro manufacturers have made their pleas to the Prime Minister. The members of the British Microcomputer Manufacturers Group are mostly producers of business machines, the exception being Sinclair Research. They have not seen the phenomenal growth of the home computer market but have been working hard at getting a slice of a market long dominated by American machines.

Now they fear their work might all have been in vain, because the Japanese threaten to invade the market. They have seen what happened to the car industry, the motor-cycle industry, the hi-fi industry and the television industry, and they fear it could happen to them.

They see the help the Japanese competition receives from its government, money to help with new

developments and exports being only two items, and the ability to consider the market in the long term because each company has the backing of its own conglomerate, and they realise their pricing cannot be on the same basis and is likely to result in lower prices.

By contrast, the Government seems to be doing all it can to discourage our industry from growing. Despite the financial support it has been willing to give to companies to develop their products, it has refused to adopt a buyBritish policy for micros in Government departments and imposes a 17 percent levy on imports of electronic
components used by the British industry in making its machines, whereas the duty on completed machines is only between six and eight percent.

The fears of British manufacturers are compounded by having seen the first of the Japanese machines making a brief appearance on the scene. Names like Epson, Sony and Sharp, no strangers to the British market for a variety of other products, have all produced machines which are threatening to make an appearance in Britain.

Added to that there is the assumption by many people that, if a subject has anything to do with electronics, the Japanese are bound to be better at it than the rest of the world. A BBC television program before Christmas introduced its viewers to the uses of the Spectrum, Dragon and BBC Model B, but saved its greatest praise for the new portable Epson machine, despite the fact that the markets at which each of the machines was aimed was different.

It also failed to mention that the British machines were available immediately and had been for some time, while the Japanese machine had yet to prove itself in the market.

While accepting that the Japanese have been very successful in a limited number of markets, they are not infallible. They have their problems with unemployment and the high levels of public spending. Also many people

forget that the most successful country at exporting in the world is Britain.
On that basis it would be better for the British industry to concentrate on its strengths and forget about asking for help in the form of a blanket ban for a year. Apart from the difficultly in achieving the objective, many importers would know about the possibility of a ban and would stockpile the necessary number of machines and there would be the danger of competitors imposing even more stringent import controls. The aim of Sinclair to break into the Japanese market would then get nowhere.

A better course would be for the industry first to start believing in itself. Anyone who doubts the ability of the British to adapt to new markets should study what has happened in the Sinclair market in the last year. While being only a small part of industry's output, it is a good example of what can be achieved with a little ingenuity.
The Government could then build on that expertise by accepting the arguments of Clive Sinclair and removing some of the obstacles to growth. This will be a year in which the direction of home computing will be set. There are a number of ways in which the Government can help it move to the advantage of British manufacturers - but an import ban is not one of them.

## ZX KEYBOARD FOR USE WITH 80/81 SPECTRUM

#### Abstract

Our new cased keyboard has 52 keys, 12 of these are used for the numeric pad. The numenc pad offers some useful features, you can cursor with one hand and it will be a boon for anyone who enters a lot of numeric data. The pad is a repeat of the $1-9$ keys plus it has a full stop and a shift key. The numeric pad keys are coloured in red, the normal keyboard keys are grey, with the case being black which makes the whole thing very attractive. The case measures $15 \times 9 \times 21 / 2$. The computer (either $80 / 81$ or spectrum) fits neatly inside. You will have to remove the computer from its original case, it is then screwed to the base of the case. The case had all the bosses already fitted and the screw holes are marked. Also fitted inside the case is a mother board $\mid 81$ model only) which allows $16 \mathrm{~K}, 32 \mathrm{~K}$ and 64 K to be fitted in the case. All the connections are at the rear of the case i.e. Power, Mic. Ear, T.V and the expansion port. The case is large enough for other add ons also to be fitted inside. One of these could be the power supply, then you

 could very quickly fit a mains switch, or a switch on the 9 V line. This means you have a very smart self-contained unit. This case does not stop you from using any other add-ons that you may have e.g. Printer etc. We are convinced that this is the best keyboard available at present. It offers more keys and features than any other keyboard in its price range
## NOTE

The case can be purchased separately with the keyboard aperture uncut, so if you have one of our early uncased keyboards, or in fact any other suppliers' keyboards, these could be fitted. The keyboard is connected to your computer by a nbbon cable and this has connectors fitted which simply push into the Sinclair connectors. It is a simple two minute job and requires no electronic skills. This keyboard does not need any soldering. Please specify on order whether you require the ZX 81 or Spectrum case.

## SPECTRUM MODEL

This is supplied with spectrum legends, and a slightly different base for fitting the spectrum inside, again all the connectors are at the rear of the case and there is plenty of room for the power supply (and other add-ons). Should you want to change, we can supply both the Spectrum legends and details of updating your case which will enable modification from the ZX 81 to spectrum. PLEASE specify on your order whether you require the $Z \times 8$ I or spectrum case.

Internal fixing for ZX 81 keyboard case.

Internal fixing for spectrum keyboard case.

## SPECTRUM LIGHT PEN

The pen enables you to produce high resolution drawings on your own television set, saving a vast amount of time over using basic programming statements, such as Plot. Draw etc. You can erase, modify and save drawings and it comes complete with software program. The superb light pen is available from DK Tronicsatonly £19.95

# 2X80-81 Spectrum HARDWARE 

## 4KTOOLKIT

This is the toolkit which won acclaim in the feature in the August 1982 issue (pages 29 and 30) of Sinclair User. "It is the most impressive program, fast in execution with clear and full instructions. .it stands out from the rest of the field. " The ZXED is a powerful editor for use on the expanded ZX81. It is intended for use by the serious BASIC programmer and offers several useful and time saving features most helpful during all stages of program development. The facilties provided are as follows: ALTER, BYTES, COPY, DELETE, FIND, HELP, INSERT, KEEP, MOVE, RENUMBER AND VERIFY. The Spectrum Toolkit contains most of the features above plus autoline numberer and append, and will run in the 16 K and 48 K spectrum.

## MEMORY

## 16K MEMORY EXPANSION

£22.95
The 16 K used 4116 Dynamic Ram Chips. We use the dynamic because they are much denser than static ram and occupy less space. They are also much cheaper than the equivalent product using the static Ram. The Ram is manufactured with high quality materials and uses high speed low power Rams. It is supplied ready-built and only needs to be plugged into the rear of the computer. All the components are fitted into holders. This massive add on memory which comes to you fully assembled and tested is the cheapest 16 K memory available anywhere. Position in memory from 163834 to 32768 (same as the Sinclair Memory).

16K (UNCASED) £19.95

## 64K MEMORY EXPANSION

$£ 52.95$
All the above information on the 16 K also applies to the 64 K Memory Expansion, but the advantage lies in the 64 K giving nearly four times the memory. This advanced model has 56 K of usable memory. In addition, the block from 8 K to 16 K can be switched out to enable the use of other add-ons. The graphics Rom is to be used in this area. Postion in Memory: 8192-65536. The block from $813 / 42-16384$ is switchable.

64K (UNCASED) £49.95

## 4K GRAPHICS ROM

$£ 24.95$
The DK Graphic module is our latest ZX 81 accessory. This module unlike most other accessories fits neatly inside your computer under the keyboard. The module comes ready buitt, fully tested and complete with a 4 K graphic ROM. This will give you an unbelievable 448 extra pre-programmed graphics, your normal graphic set contains only 64 This means that you now have 512 graphics and with their inverse 1024. This now turns the 81 into a very powerful computer with a graphic set rarely found on larger more expensive machines. In the ROM are lower case letters, bombs, bullets, rockets, tanks, a complete set of invaders graphics and that only accounts for about 50 of them. there are still about 400 left (that may give you an idea as to the scope of the new ROM). However, the module does not finish there, it also has a spare holder on the board which will accept a further 4 K of ROM/RAM. This holder can be fitted with a IK/2K/RAM and can be used for user definable graphics so you can create your own custom character sets.

## WHY WAIT? ORDER TODAY FOR FAST DELIVERY

## BLACKCRYSTAL

## An epic role-playing adventure of fantasy in six programs.

CARNEL SDFTWARE

settes for the more serious user which are available only for the ZX-81, such as Budget and Financial Pack.

In addition, we can make a pre-publication offer on a book being published shortly, Guide to the Spectrum ROM. It is not yet generally available but can be bought by members at the special price of £2.95.

As usual, we are making two special offers and this month we have been able to obtain a special price on some of the best games software on the market. Mikro-gen Chess and Scramble are both highlyrated cassettes and we have been able to obtain a discount of 20 percent on them and the rest of the company's range.

## Sinclair

 has it coveredALL THE cassette newsletters being sent to members now have a picture of Clive Sinclair on the cover. That is the result of a program sent by one of the members, M Scott of Gateshead, Tyne-andWear.

The program to print Clive's face was adapted from the entry from Scott, one of the oldest members of the growing Sinclair User Club. It was one of an increasing number of programs being sent by members.

The printout of Clive is now likely to be on all the newsletters, which are sent every two months to keep everyone in the User Club up-to-date on what is happening, both in the club and the world of Sinclair computers.

The latest cassette incontinued on page 10

continued from page 9
cludes another instalment of the course for learning machine code, as well as programs and news. There is also the special telephone number for the problem-answering service which members can ring at any time for expert advice on difficulties they
may be having. As readers of Sinclair User, in increasing numbers, are learning. there are many advantages to be gained by being a member of the User Club.

Apart from the cassette newsletter, they include regular discounts on a wide range of hardware and software. Each month
there is a special offer. In the last few months it has included a reduction in the prices of most of the leading games programs on the market, the Kempston Klik keyboard and the full range of Thurnall Electronics add-ons.

This month's offer can be seen on the preceding page.

The club also offers a service to help with the loading and saving of
tapes. Many of the problems arise from tape heads being wronglyaligned. We are able to offer, for a nominal cost of $£ 5$, to re-align members' cassette heads. Further details can be obtained from the Sinclair User Club.

The activities of the club are also dealt with each month in the special club pages. To take advantage of all the benefits, complete the application form.

## Britain

Aylesbury ZX Computer Club: Ken Knight, 22 Mount Street Aylesbury ( 5181 or 630867). Meetings: first Wednesday and third Thursday of the month.
Doncaster and District Micro Club: John Woods, 60 Dundas Road, Wheatley, Doncaster DN2 4DR; (0302) 29357.
Edinburgh ZX Users' Club: J. Palmer ( 031661 3183) or K Mitchell (031 334 8483). Meetings: second Wednesday of the month at Claremont Hotel.
EZUG-Educational ZX-80/81 Users' Group: Eric Deeson, Highgate School, Birmingham B12 9DS.
Furness Computer Club: R J C Wade, 67 Sands Road, Ulverston, Cumbria (Ulverton 55068). Meets every other week on Wednesday evenings.
Glasgow ZX-80/81 Users' Club: Ian Watt, 107 Greenwood Road, Clarkston, Glasgow G76 7LW (041 638 1241). Meetings: second and fourth monday of each month.
Hassocks ZX Micro User Club, Sussex: Paul King (Hassocks 4530). Inverclyde ZX-81 Users' Club: Robert Watt, 9 St. John's Road, Gourock, Renfrewshire, PA19 1PL (Gourock 39967). Meetings: Every other week on Monday at Greenock Society of the Deaf, Kelly Street, Greenock.
Keighley Computer Club: Colin Price, Redholt, Ingrow, Keighley (603133).

Merseyside Co-op ZX Users' Group: Keith Driscoll, 53 Melville Road, Bootle, Merseyside L20 6NE; 051-922 3163.
National ZX-80 and ZX81 Users' Club: 44-46 Earls Court Road, London W8 6EJ.
North Hertfordshire Home Computer Club: R Crutchfield, 2 Durham Road, Stevenage; Meetings: first Friday of the month at the Settlement, Nevells Road, Letchworth.
North London Hobby Computer Club: ZX users' group meets at North London Polytechnic, Holloway Road, London N7 each Monday, 6 pm .
Nottingham Microcomputer Club: ZX-80/81 users' group, G E Basford, 9 Holme Close, The Pastures, Woodborough, Nottingham. Orpington Computer Club: Roger Pyatt, 23 Arundel Drive, Orpington, Kent, (Orpington 20281).
Perth and District Amateur Computer Society: Alastair MacPherson, 154 Oakbank Road, Perth PH1 1HA (29633). Meetings: third Tuesday of each month at Hunters Lodge Motel, Benkfoot.
Scunthorpe ZX Club: C P Hazelton, 26 Rilestone Place, Bottesford, Scunthorpe: (0724 63466).
Sheffield: Andrew Moore, 1 Ketton Avenue, Sheffield S8 BPA would like people interested in starting a club in the area to contact him enclosing a stamped-addressed envelope for details.
Sittingbourne: Anurag Vidyarthi ( 079573149 ). Would be interested to hear from anyone who wants to start a club near the Medway towns.

Swindon ZX Computer Club: Andrew Bartlett, 47 Grosvenor Road, Swindon, Wilts SN1 4LT; (0793) 3077. Monthly meetings and software library.
Thames Valley ZX Users' Club: Richard Shepherd, 22 Green Leys, Maidenhead, Berkshire SL6 7EZ; (0628) 21107 (evenings and weekends). Hopes to start meetings on a regular basis.
Worle Computer Club: S W Rabone, 18 Castle Road, Worle, Weston-super-Mare BS22 9JW (Weston-super-Mare 513068). Meetings: Woodsprings Inn, Worle, on alternate Mondays.
ZX-Aid: Conrad Roe, 25 Cherry Tree Avenue, Walsall WS5 4LH (Walsall 25465). Please include sae. Meetings twice monthly.
ZX Guaranteed: G A Bobker, 29 Chadderton Drive, Unsworth, Bury, Lancashire. Exchanges information and programs throughout the country.
ZX-80/ZX81 Users' Club: PO Box 159, Kingston-on-Thames. A postal club.

Your new ZX Spectrum is literally packed with sophisticated graphics. Colour. High resolution. Plot. Draw. Circle. Border. Ink, Paper Colours User-defined characters to name just a few!
That's why we have packed the new Spectrum Print ' $n$ ' Plotter Jotter with every facility to exploit your graphics to the full.
After the first few weeks of "playing" with your computer you will wan to get down to serious programming and planning in which professionallooking graphics should play a major part.
What better way to work it out than with a Print 'n' Plotter jotter?

## The professional pad

Print ' $n$ ' Plotter is not just another programming pad.
Just look at the specifications:
BIG SIZE $161 / 2^{\prime \prime} \times 113 / 4^{\prime \prime} .100$ Pages - 50 Print Grids and 50 High Resolution Plot Grids.
Printed on high-quality tracing. paper, enabling you to overlay the pa for direct co-ordination between PRINT and PLOT or to copy from illustrations, maps, charts, photos etc.
PRINT Grids show all numbered co-ordinates for the 704 screen positions, plus INPUT lines.
PLOT Grids show every numbered co-ordinate for the 45.056 Pixels! Each pad contains 600 user-definable grids for use with the BIN $n$. POKE USR "a" function
And the whole thing is fully bound with fly leaf cover and complete with a set of seven colour pens!

## The simple way to get serious

Spectrum Graphics can become very complex, so before you start to program the best way is to work it out on a Print ' $n$ ' Plotter and save all those errors!
Take for instance the common CIRCLE. With a jotter you can establish the exact screen location for the centre in seconds, and it will stop you running out of screen because of a too large radius. Working our DRAW is similar: pre-determine DRAW lines and PLOT positions before you start With a jotter you can build-up graphics using every facility with a direct co-ordination between each.
For instance, correct PLOT OVER or PRINT OVER positions will be easy with a jotter.

## See the show for just 95p!

To demonstrate the graphic possibilities with the SPECTRUM JOTTER we have produced a cassette-based Demonstration program for only 95 R (inc VAT and P\&P). Why hot send for a copy, or order it together with your JOTTER?

## Just part of a range of $\mathbf{Z X}$ products

The Spectrum jotter is, of course, an upgraded version of our popular ZX8I Print ' $n$ ' Plotter Jotter and Film. For ZX8I owners these are available by direct mail or through a growing number of retailers and compshops. The ZX8I Jotter is a 100 page Graphics pad that exploits to the full the graphics facilities of that micro. $\mathbf{Z X 8 1}$ Film is a matt film version of the jotter which is re-usable and ideal for 'copying' graphics.

Our manual: "ZX Graphics programming mode easy" explains everything you need to know about using the $\mathrm{ZX81}$ products, and when used in conjunction with the Spectrum cassette will prove to be the definitive guide to the subject.

And for ZX users (whether Spectrum or $\mathrm{ZX81}$ ) we still market Printer Paper at $\& 1$ less than Sinclairs!
Why not write and place your order today? Graphics can be a very serious subject . . Print 'n' Plotter products can make it easier . . . and better in a hundred ways you never thought possible!
 ZX81 PLOTTER FILMS @ 22.25 each. GRAPHICS PROGRAMMING MADE EASY'MANUALS @ $\angle 1.50 \mathrm{ea}$ PACKS OF XX PRINTER PAPER ( 5ROLLS) @ 610.95 per pack ZX SPECTRUM DEMO CASSETTES @ 95 peach.

## WOBBLY RAMPACK <br> What is 'wobbly rampack'?

Ask Sinclair Users. They will tell you about the programs they have lost due to intermittent loss of memory connection resulting in a program 'crash' Oxidation of the tin-plated edge connector is the root cause of the problem. The lack of mechanical attachment between the Rampack and the Computer aggrevates this condition. Slightest movement of the rampack can cause a program crash. Improvement of the Rampack case design will not completely cure the problem.
RAMLOK kit from ADAPT Electronics provides the complete cure.
The kit replaces the tinned connector with a reliable high quality gold-plated version and provides an ingenious simple mechanical clamping device which clamps the Rampack to the Computer but is simple and easily released.

- RAMLOK kit is easily fitted requiring no specialist knowledge or skills.
- No cutting or drilling necessary
- No special tools required just a soldering iron.
- Step by step instructions included.
- Access to the computer after modification is unaffected.
- Suits ZX81/80. Spectrum version available shortly.
- Suitable for all popular RAMPACKS including Sinclair 16 K .

PRICE $57.50+50$ p pfop inclusive
Please send ......... RAMLOK kits.
1 enclose cheque/PO value $£$.

## We've got big ideas about you and your Sinclair <br> Because we know you're always looking for

 new ideas to make the most of your Sinclair computer, we're making sure you never run out of steam!Just launched - and out in December - was Sinclair Projects magazine, full of fascinating schemes to tax your skills and reveal the practical potential of your Sinclair in applications like controlling lights, upgrading computer graphics, household security, and many more.
Whether you're new to computing, or an old hand, you're certain to be an enthusiast. That's why we introduced Sinclair User magazine for the latest news, techniques andenhancements tomatch your enthusiasm(now with new
'Spectrum User' supplement!) Next, its companion magazine, Sinclair Programs, became an overnight success with 40 NEW programs, ready for you to key, in every issue.

Now the exciting new Sinclair Projects completes your store of possibilities with a huge increase in computing potential for you to explore.

Sinclair Projects is published on alternate months to Sinclair Programs, so there's always something new to test your skill. But here's the best news: when you subscribe to all three Sinclair magazines, you get the first three issues of new Sinclair Projects absolutely free!

We know you've got big ideas about your Sinclair. Make sure you live up to them with threefold computing pleasure. Fill out the order form now and we'll send you the first ideas-packed Sinclair Projects - hot off the press.

Mail to: ECC Publications Limited; 30-31 Islington Green, London N1 8BJ

# Step into the unknown with the Future Makers 

## P.S.S. bring you fast action, arcade style games, fantasy and sci-fi, plus exciting technology in machine program aids \& hardware/software combinations

## ZX81 16K PROGRAMS

## Krazy Kong <br> £3.95 <br> All machine code version of the popular arcade game.

 This program has all the features of the original and is every bit as fast.
## Ghost Hunt

Gobble you way through a Maze- Ghosts, power pills etc etc. very fast.

## Maze Drag Race 3.95

Drive through a giant maze 9 times the size of the screen picking up points as you go - but watch out for the other cars, rocks oil \& ice. A really superb M/C game.

## Alien

3.95

Set on board the spaceship Nostrodamus, can you choose the right weapon to repel the alien before he kills your crew?

## DCoder

5.95

Essentially a disassembler for your machine code but with one important difference - it will relocate the code in whole or part to any other part of memory.

## Zonix

Sound effects for your ZX81 are now available at a price you can afford! Zonix is a hardware/software combination that allows you to write programs with real impact. The software includes two programs: a) A program set to produce bombs, missiles, fire engines, tunes, telephones and sirens. Also includes the facility to make your own.
b) A program that turns your $\mathrm{ZX81}$ into an electronic organ.
The hardware is an amplifier with volume control and loudspeaker which simply plugs into the mic socket of your $\mathrm{ZX81}$. The sounds can be actuated from within your programs with a simple command. They can also be of various lengths so the limit is only your own imagination.

## MCoder <br> £7.95

This truly amazing program is the most flexible compiler available for the ZX81 AND NOW THE SPECTRUM TOOI.
MCoder will instantly translate your slow basic programs into super fast machine code at the touch of a key. It is also extremely easy to use: just load MCoder (the $\mathbf{Z X 8 1}$ version is just 2 K long, the spectrum versions 3 K ) and then write your basic program as normal or you can load a basic program from tape to save you retyping the whole thing. MCoder then allows you to run and debug the basic until it is fault free. Now you can bring MCoder into operation using a print USR command - the basic will then be compiled into machine code as you watch!.
On average MCoder will increase the speed of basic programs 75 times. Both the ZX 81 and the spectrum version will handle $95 \%$ of all basic commands and is quite simply the best compiler on the market. Please state whether 16 K or 48 K when ordering the spectrum MCoder.

## QSave

£15.95
MANY THOUSANDS OF SATISFIED CUSTOMERS NOW HAVE A HIGHLY RELIABLE LOADING SYSTEM WHICH OPERATES 16 TIMES FASTER THAN THE SINCLAIR SYSTEM'

## The news is that QSAVE has been improved for ' 83

## This is what you get:

1. A cassette interface to improve the signal quality (essential if a high speed loader is to be reliable) which will also improve the loading of your programs. The interface plugs into your ZX 81 using the leads supplied and has been improved to incorporate: AN AUTOMATIC LEVEL CONTROL....AN OVERLOAD WARNING LIGHT....A SAVE/ LOAD SWITCH (no unplugging of mic or earphone leads)....AN ON/OFF SWITCH (which doubles as a Reset switch). With these features loading is highly reliable (programs will still load with a volume setting as LOW as $1 / 4$ ).
2. Highly sophisticated software which will load and Save programs at 16 times their normal speed (i.e. 8 K in 10 secs; 48 K in 110 secs). Programs can be named to allow a superfast file search through a tape. It works equally well with autorun programs, Basic or machine code.
A TRUE verify feature is also provided - this allows you to verify that a 'SAVE'd program has 'SAVE'd properly BEFORE turning off the power and finding all is lost.
QSAVE will operate with ANY memory, on ANY program length AND with your existing programs. All the above is contained in $1 / 2 \mathrm{~K}$ of superbly easy to use Software.

## PERSONAL SOFTWARE SERVICES

THE COMPUTER DIVISION of Sinclair Research has moved into new premises at Willis Road, Cambridge (above). An old factory, part of which can be seen on the right of the picture, has been completely refurbished.

It is the first time both sections of the division research and development and marketing - have been together on one site. The factory was bought in the autumn of 1981 and improvement work has been going on since then.

## Spectrum goes on retail sale

THE SPECTRUM is now being sold over the counter in 65 major branches of W H Smith. Sales areas include Manchester, Birmingham and south-east London.

It was introduced into Smiths at the beginning of December and John Rowland, market development manager, is optimistic

## Healthy move by young software house

SINCLAIR computers are moving into the health market. A series of programs has been launched by Eastmead Computer Systems intended to educate and advise on a comprehensive range of medical topics.
The series is not intended to replace professional advice but to complement it by teaching people about preventative techniques and how to cope with problems when they arise. It is hoped that people will be encouraged to seek medical advice in cases when they might otherwise have delayed.

Two of the cassettes have been available for the ZX-81 since before Christmas. They deal with basic medicine and a simple screening system. There are plans to issue them later for the Spectrum.
The series is based on the writings of Dr Vernon Coleman, author of a number of books and articles on the subject.

## Fiction prize awarded

THE FIRST Sinclair Prize for Fiction has been won by Hilda Berntein for her novel based on her experience of political conflict in South Africa. She will receive $£ 5,000$ and Death is Part of the Process is to be published soon by Sinclair Browne, the publishing house formed by Clive Sinclair and Patrick Browne in 1981.

Sinclair Research sponsored the prize for un-
published work to encourage "high-quality writing with contemporary social and political relevance". After its success in the first year it is intended to continue with the award, which the company is confident will become a major feature of the literary scene.

It is part of the company's sponsorship of the arts which involves the support of many groups.
about the new addition to the Smith computer range.
"We are selling the Spectrum on a permanent basis and we would like to sell periphals for the Spectrum when, and if, they arrive," he says.
"We are also selling the Sinclair range of software to support the Spectrum and this is expanding all the time.'

The Smith move into selling the Spectrum has not slackened demand for the ZX-81 and its software. "We were surprised by the continuing demand for the ZX-81. Sales figures are on a level with this time last year," he says.

Smith's range of software now comprises more than 40 titles for the Spectrum and ZX-81. The company is also starting to sell accessories and books for both machines.

## New software club plans <br> A NEW CLUB has been catalogue with the January

formed in the U.S. for owners of the TS-1000, the American equivalent of the ZX-81. The Run-it Software Club is described by one of its organisers, Gayle Morse, as a program-of-the-month club. If the software which it presents is received well in the States, the club may also expand to cover the British market. Morse says:
"The club was conceived last August. We did some test marketing in November and December and launched our first
feature program".

That program deals with buying and selling property which Run-it has priced at $\$ 10.95$. The suggested retail price is $\$ 16.95$ and the regular Run-it price is \$14.95.

The Real Estate Advisor is just one sample of the quality of software which Run-it wants to market in the coming months. "Runit programs all feature professional-level programming and clearlywritten manuals," the company says.

Regular selections in the catalogue will have 10 and 20 percent discounts each month but the Run-it feature programs will be priced at 30 or 40 percent off retail. The programs are written by a combination of staff and outside programmers.

Individual orders from Britain are welcome and further information can be obtained from Run-it Software Inc, 732 South Sherman, Chicago, Illinois 60605.

## Import decision awaited

A FINAL decision is still awaited on the demand for a year's ban on the import of microcomputers into Britain. The plea was made by a group of British micro
manufacturers in a letter to the Prime Minister. An acknowledgment has been received and the manufacturers are now waiting to see if there will be any ac-

## The thinking Hobbit

ARTIFICIAL intelligence has reached the Spectrum, according to Nigel Searle, head of Sinclair Research computer division. Searle was talking about The Hobbit, a new 48 K adventure game from Melbourne House.

Artificial intelligence gives a computer the ability to communicate with a user as if it had not been pro-
grammed to do so. In the case of The Hobbit, artificial intelligence is exhibited by the characters in the adventure which seem to act out normal lives which do not depend on how the player moves.

The Hobbit forms part of a new line of Spectrum software sold by Sinclair Research. Other titles include Adventures $\mathrm{A}, \mathrm{B}$ and C
ion.
The firms, known collectively as the British Microcomputer Manufacturers Group, are worried that imports could cause the British industry to be stillborn.

Although Sinclair Research is a member of the group, it has criticised the import ban call as being unhelpful. It would be better to dismantle controls which inhibited the growth of the British industry.

It is understood that officers of the BMMG are seeking a meeting with Clive Sinclair to try to resolve the differences.

## Getting away for a good start

A RESIDENTIAL weekend course has been started for new owners of the ZX-81 who are having difficulty with the official manual. The course, at the Gainsborough House Hotel, Kidderminster, costs $£ 55$ and includes full bed and board. There is accommodation for 20 people on each course and there is 15 hours of hands-on experience on one of the hotel's 20 ZX-81s.

Further information about the courses can be obtained from Christoper Dale, Gainsborough House Hotel, Bewdley Hill, Kidderminster DY11 6BS.

## ZX-81

## THE HOME DOCTOR SERIES

## Exciting Breakthrough In Home Health Advice

Announcing the launch of a series of computer programs designed to educate and advise on a comprehensive range of medical topics whilst being FUN to use.
The text has been prepared by Dr Vernon Coleman who writes from 10 years experience in a busy general practice, and who is widely acclaimed for his many books on medical topics.
The cassettes in the series cover the following topics:

1. Basic Medicine
2. All About Children
3. Mainly for Women
4. How Healthy Are You?
5. Mainly for Men
6. 101 Home Nursing Tips

The computer programs are not intended to replace professional medical advice but rather to complement this by educating users on preventitive medicine and how to cope with medical problems when they arise. The programs would therefore be equally useful in schools, homes and in industrial applications as part of health screening programs.
Each cassette costs $£ 6.75$ plus $£ 0.45$ postage and packing although as a special offer to Micro Decision readers all 6 cassettes are available for $£ 35.75$ post free.
Users should indicate whether the cassettes are for VIC 20 or ZX81. VIC 20 owners require a 3 K or 8 K RAM pack and ZX81 owners require a 16 K RAM pack to run all of the programs.

## Please allow 28 days for delivery.

# Sinclair helps ensure a very busy retirement 

IMUST gently remonstrate surely a number of people with Bill Martin and my age who have found in Sandra Mason for their microcomputers an somewhat dismissive and derogatory statement in your November issue that people over 60 years of age are unlikely to buy a microcomputer.

I am $671 / 2$ and my son bought a ZX-81 about 18 months ago. In July he bought another computer and gave the ZX-81 to me.

I became addicted and when, about six weeks ago, the ZX-81 developed a fault - it got stuck in the red shift and the $K$

intermittently changes to F - I ordered a new Spectrum, with which I now play happily.
If anyone can tell me how I can rectify cheaply the fault on the ZX-81 I shall be very grateful, as I can then pass it to another potential addict. There are
absorbing hobby for retirement.

Incidentally, I agree with your correspondent K Watson that programs in Sinclair User and Sinclair Programs are frequently poorly printed and unusable. Please remember that people capable of deciphering poor print are adept enough to write their own programs. I have a number of books of programs for ZX-81, which are printed normally, so why cannot you do the same and help us oldsters?

## E W Ansell, Cowes, IoW.

I FEEL I must refute the opinion of Messrs Martin and Mason - Futurology, September - that householders over 60 years old are too mean to buy a computer costing more than $£ 10$. I know of at least three in Caernarvon who are Sinclair users. I have a Spectrum and two are on the waiting list. Or perhaps they think we are too old to understand them? We may be slower but we get there in the end.

Reference Promises, Promises. My enquiries to

Sinclair have been promptly and politely answered, both by sales and technical departments, apart from late delivery, I have no complaints.

> F Smalley, Llanfaglan, Caernarvon.

## Non-wobble solution

HERE IS an idea to stop RAM pack wobble on the ZX-81. Simply stick the RAM pack to the computer with small pieces of Velcro fastening tape placed between the two units. It also works with the memopack.

Trevor Neale,
Folkestone, Kent.

## Food for thought

I HAVE seen advertisements in your magazine and others regarding other programming languages for the ZX-81 and Spectrum. The Artic Computing software house with its ZX Forth at $£ 35$ is one example.
I have yet to see a review or assessment of their value or quality in any magazine. Your comments
or a review or assessments would be much appreciated.

## W E Rogers, Dagenham, Essex.

THE SPECTRUM programming manual lists the Microdrive keywords but does not explain their use. Could you publish an article explaining how the Microdrives will operate.

## P Bankes,

Debenham, Suffolk.

- Thank you for your comments. All the suggestions are being considered for future articles.

## Spaced out with commas

I FIND that what the manual says - page 200 is not what happens in practice with my ZX-81; for commas in print statements, the rules are:

Each comma causes a space to be printed at the print position in force immediately before the comma is acted on.

Each comma moves the print position to the next column 0 throwing a new line - or the next column 16. Here is a demonstration program:
10 FOR I=1 TO 64
20 PRINT "**";
30 NEXT I
40 PRINT AT 0,15, , " $O$ " which shows that line 40 prints three spaces at $(0,15)$ $(0,16)(1,0)$ and 0 at $(1,16)$.

W E Thomson, Aldeburgh, Suffolk.

## Taking the MIC

AFTER many days spent vainly attempting to SAVE and/or verify on my Spectrum, using three different
continued from page 19
cassette recorders, all of which would LOAD easily, I accidentally found a solution.

No matter whether I want to SAVE, VERIFY or LOAD, I ignore the MIC socket and always use the EAR socket with, of course, the EAR or MIC socket on the recorder. Success every time.

This is obviously contrary to the Spectrum instruction manual. Is my Spectrum faulty? Have many/any other Spectrum users had the same problem/solution?

S C Craxford,
Andover, Hampshire

- Sinclair Research says that the Spectrum probably has a faulty MIC socket and should be returned for replacement.

## Spectrum amplified

I AM the owner of a Spectrum and am writing to inform you how powerful the Ear output of the Spectrum is. I have a monotone cassette recorder and I have found that if I connect a lead from the Spectrum Ear socket into the Ext Sp of my recorder, the sound is much amplified.

There is not only sound coming louder from the recorder but the computer sound, too.

When connecting the lead to the recorder, the jack plug should be pushed only halfway into the Ext Sp socket. Some fiddling may have to be done to achieve the amplification but the difference can easily be distinguished.

M Hawes, Ely, Cambs.

## Trying to tape best recorder

YOUR ARTICLE Finding better ways of storing on tape, October 1982, failed to provide a practical conclusion, i.e., a list of approved or recommended cassette recorders. If washing machine manufacturers can recommend washing powders, surely computer manufactures can provide a similar service on cassette recorders?

I particularly wish to know whether a Philips D6310 cassette recorder is compatible with the ZX Spectrum which I am pationtly waiting to receive.

## PDCurle, Kings Lynn,

- We did not give a list as it is impossible to test all the recorders on the market and so any list would inevitably exclude ones which worked and include others which, because of the reasons expressed in the article, might not work in a particular instance. Sinclair Research informs us that its engineers have yet to find a machine with a 3.5 mm . jack, MIC and EAR sockets which does not work with the Spectrum.

## Ephemeris put right

THANK YOU for printing reviews of our Ephemeris and Lynchmob programs in your superb Christmas number. May we ask you to publish this letter to correct two slight errors?.

Our Ephemeris programs for the ZX-81 and

Spectrum are intended for all those with a scientific interest in the solar system and will appeal to amateur astronomers rather than astrologers. The prices of the programs are $£ 6.90$ for the ZX-81 version and $£ 7.90$ for the Spectrum version.

Our fun educational game of Lynchmob is priced at $£ 4.95$ (ZX-81 16 K ) and $£ 6.50$ (Spectrum 16K). The prices are allinclusive.

Christine Hine,
Bridge Software,
Stockport, Cheshire.

## London Bridge finds favour

THANK YOU for the London Bridge program in the Christmas edition. It was lovely. I beat your score of 1,700 by scoring 2,050 . There was one brick left when I fell in to the water. I am only eight years old. Has anyone beaten my new high score?.

I also like Phasor when the alien hits you.

Owen Nurse,
Cambridge.

## Games not for sale

I WOULD appreciate it if you would publish a retraction of a review you did a few months ago of a collection of my games sent to you for publication. It implied that I could supply the cassettes commercially which I cannot do.

I am still receiving orders and it is costing me a good deal of money to return cheques and explain the situation. D E Healey, 63 Cedar Avenue, Coseley, West Midlands.

## Bug feared in Spectrum

I OWN a Spectrum on which I seem to have discovered a bug. I would be interested to know if other readers have reported any problem, since I cannot get a reply from Sinclair on the matter.

The INKEY \$ function does not appear to work correctly. e.g.,

## 10 Pause O: Let i\$ +

## INKEY \$

20 If is = "a" then . . .
30 If i\$ = "b" then . . .
The above fails to run past the INKEY \$ statement.

Similar pieces of program, for example in the "Draw" program on the Horizons pack, also crash

the program. Replacing the above with:
10 Poke 23560, 0 (sys. variable - last key)
20 Pause O; Let i\$ = CHR\$ PEEK 23560 works fine.
Do I have a ROM bug?
M Adcock, Braintree, Essex.

- According to a Sinclair Research spokes man, you do not have a bug. He adds that Pause 0 will wait until a key is pressed.

## Program shortage

I WISH to complain at the lack of Spectrum programs in December in your Program Printout. I know that some of the programs listed can run on the Spectrum with some modifications but that is beside the point. Your publication is normally very good but should cater for all Sinclair users every month, in articles and programs.
I was sorry to see Spectrum User absorbed into the main body of the magazine but concede to your reasons.

Your software reviews are excellent but I think you could do with a little more in-depth hardware reviews, i.e., comparative merits of 10 types of RAM or keyboard, for example.

Nicholas Wright, Leicester.

- We apologise for the
lack of Spectrum programs in the December issue, due to an oversight. We had, however, a number of articles of interest to Spectrum owners, including a review of the Sinclair range of software. We acknowledge your comments about possible reviews and will bear them in mind.

## Printer fumes harm query

CAN YOU tell me if there are any harmful effects from breathing the fumes given off by the Sinclair printer?

P Matthews, Hampstead, NW3.

- None of which we are aware.

WHILE READING the article on code junkies December, 1982 issue my enjoyment was dampened once more by the assumption that only young males are now striving at school, Scouts and in cricket clubs to gain the

Code sexists rule

## Bachs chord skill needed for keys

social experience to fit them for a sparkling career in computing.

My children, a girl and a boy, buy this magazine between them each month and they are equally interested in computers, mathematics, the Beano, Scouts/Guides, netball/ cricket. When my daughter reads this article once again she will get the message - boys only. From Ladybird books to Sinclair User, the meaning seems to be clear. Sad?

J E M Fradgley, Stratford-upon-Avon,

Warwickshire.

I HAVE not had my Spectrum very long. It is still having teething troubles with me but one thing is already obvious - that the approach to the keyboard has to be not that of a touch-typist, but rather of an organist with all J S Bach's skill in playing chords.
How he would have appreciated the power of this great little four-decker instrument, though I suspect that he would have had two shift tabs brought out under his thumbs.

C R Oswin,
Christchurch, Dorset.

## Sufferers' club donation plea

I HAVE just read the November issue of Sinclair User, in particular the latest batch of letters from members of the Sinclair Sufferers' Club. As an ear-

## Identity problem

FOR EIGHT weeks Oxford Computer Publishing has been advertising in Sinclair User Machine Code Test Tools and inviting orders to PO Box 99 , Oxford. The dymostickers identifying customers of Box 99 at Oxford Post Office fell from the boxes, according to the Post Office, and OCP orders were sent to the previous owner of Box 99.

OCP therefore is appealing to customers, with apologies, to persevere and to telephone orders to its office address, 0753 888866, or to post orders to 4 High Street, Chalfont St. Peter, Bucks SL9 9QB.

B N Richardson, Director
Oxford Computer
Publishining.

## МЕМОРАК 16 K

$=$

MEMOPAK 16K
For those just setting out on the road to real computing, this pack transforms the ZX81 from a toy to a powerful computer. Data storage, extended programming and complex displays become feasible.
For even greater capacity, memory packs can be added together $(16+16+16 \mathrm{~K}$ or $16+32 \mathrm{~K})$. The MEMOPAK 32 K and the MEMOPAK 64 K offer large memories at economical prices.

## Hemotect

## MEMOCALC <br> $\mathrm{C}_{\mathbf{T}}$

The screen display behaves as a 'window' on a large sheet of paper on which a table of numbers is laid out. The maximum size of the table is determined by the memory capacity, and with a MEMOPAK 64 K a table of up to 7000 numbers with up to 250 rows or 99 columns can be specified. Each location in the table can be either a number which is keyed in or a formula which generates a number. Every time the command to 'calculate' is given, all the formulae in the table are re-evaluated. Spreadsheet analysis started as an aid to cash-flow analysis, but this powerful tool has now been generalised and MEMOCALC with its special ability to perform iterative calculations is invaluable in the performance of numerical tasks.

The Memotech approach to microcomputing is to take the well-proven and popular $\mathrm{ZX81}$ as the heart of a modular system. This small computer houses the powerful Z80A processing unit and acts as the central processor module through which the MEMOPAKS operate.
Memotech has a reputation for professional quality, producing units which are designed to fit perfectly, to look well-balanced, and to work efficiently and reliably.
The modular approach gives $\mathrm{ZX81}$ owners the freedom to design the system they really need. Furthermore, the intercompatibility of the modules ensures that later additions will click straight in, to give you a system that grows with your ambitions and abilities.
As one example, a system with 16 K of memory and MEMOCALC is all that is required to perform sophisticated numerical calculations giving the same results as a computer at 10 times the price. The problem may be as complicated as a cash flow or production schedule, or as simple as household accounts or pocket money budgeting. If the bank manager wants to see the cash flow, then a single print instruction to the Centronics I/F will give a printout which is more than acceptable to any bank.
The example system which is shown, on the other hand, would satisfy the needs of someone who wanted to enter data via a light-touch keyboard, construct and label graphs, and then copy the screen to an 80 -column printer. Only 16 K of memory is used here but with additional memory, more than one video page can be stored. Up to 7 successive pages can be displayed cyclicly to give animated displays.

MEMOPAK HRG This pack breaks down the constraints imposed by operating at the $\mathrm{ZX81}$ character level and allows high definition displays to be generated. All $248 \times 192$ individual pixels can be controlled using simple commands, and the built in software enables the user to work interactively at the dot, line, character, block and page levels. Scrolling, flashing and animation are all here.
(x) Mopan lf

MEMOPAK Centronics I/F The BASIC commands
LPRINT, LLIST and COPY are used to print on any CENTRONICS type printer. All ASCII characters are generated and translation takes place automatically within the pack. Reverse capitals give lower case. Additional facilities allow high resolution printing. The full capabilities of your printer are now under the control of the ZX 81 .

based pack accepts standard Z80 assembly language mnemonics to allow you to write faster and more compact programs. It has its own ADD, EDIT, LIST, ASSM and QUIT functions, the editor allowing insertion, deletion, automatic line renumbering and error checking. Source code and object code listings can be displayed and printed in decimal or hex format.

MEMOTECH Keyboard The light-touch positive stop keys of this elegant typewriter-pitch keyboard allow you to work faster, more accurately and more confidently. To speed you along we have added an extra SHIFT key to the array at top right. The keyboard is attached by a cable to the Keyboard Buffer which fits in amongst your other Memopaks or straight onto the back of your ZX81.

To ensure that your expectations are realised, care is taken at every stage to design features into the system to anticipate your frustrations and to forestall them. For example:
A) Memories are cumulative e.g. 16 K and 32 K can be added to the MEMOPAK 16 K or even to the Sinclair 16K RAM pack.
B) The HRG firmware allows commonly used constructions (such as scrolling, shading and labelling graphs), which might otherwise be beyond the user's programming capabilities, to be evoked by a few simple commands.
C) The Centronics I/F converts ZX81 character codes into ASCII and extends the print line to the width of the printer, still using the LLIST, LPRINT and COPY commands.
Looking forward, Memotech will continue to back the ZX81 through 1983 with fast storage devices, pressure sensitive electronic drawing boards and more software packs including a wordprocessor and an RS232 interface.
MEMOPAKS may be ordered by post (cheque, Access/Barclaycard quoting number) or by telephone. Please make cheques payable to Memotech Ltd. and please include $£ 2.00$ per unit for packaging and postage inland (overseas $£ 3.00$ ).

We want to be sure you are satisfied with your Memopak - so we offer a 14 -day money back guarantee on all our products.
DEMOTECH
MEMOTECH LIMITED, WITNEY, OXON. OX8 6BX TELEPHONE (0993) 2977 TELEX 83372 MEMTEC G

Hunter Products battery - backed RAM board

# U.S.firm aids fact storage 

HUNTER PRODUCTS, an American firm, has produced a batterybacked RAM board which can be moved about in the memory of a ZX-81 to any 8 K section. The board is available as a kit and is very easy to build from the detailed instructions.
The lithium battery included means that the 6116 RAM chips keep the program even when you switch-off the machine, just like a ROM. That means that machine code routines and even Basic can be stored in the onboard RAM, to be recalled at any time without having to load them from tape.

A simple 2 K RAM is provided. ROMs and RAM can be mixed on the board but that involves some cutting of tracks. One problem is that the board cannot decode the last address line A15.

One advantage is that you can replace the 8 K ROM with a batterybacked copy and then add your own commands or correct the mistakes in the ROM.

The kit costs £19.95 inc. VAT from Hunter 5AS. That is a postal address as the company is in the U.S.

## The complete expansion unit

DCP INTERSPEC pack is a combination of several other packs produced by the same firm into one box which fits the ZX-81 or the Spectrum. It contains an 8 -bit input and output port, four relay-isolated outputs rated at $24 \mathrm{~V}-1 \mathrm{amp}$, four switch inputs - for joysticks, thermostats - and an analogue-to-digital converter with eight channels. That is an appreciable amount in a box only $41 / 2 \mathrm{in}$. long by 3 in . wide and 2 in . tall.
The Interspec has an expansion bus at the back which provides the data, read and write control

## Easier Reader

BRANDON PRODUCTS stocks the easy reader computer stand for holding magazines and books. The metal stand i. very stable and tilts back a magazine at an angle for easy viewing. The magazine is held by a large clip and there are extension arms on both top and right-hand side for large pages. It is very useful for copying-in
programs; it folds flat for storage.

Contact Brandon Products, Foiest Home, Normansand, Salisbury, Wilts SP5 2BN. Tel: 079439-336. Cost is $£ 14.95$ inc. VAT and postage. Brandon also has a range of T shirts and sweat shirts with ZX-81 and Spectrum logos for $£ 3.25$ and $£ 6.99$ respectively.

Brandon Products' easy reader computer stand

signals, plus two deviceselect pins to add to your own interfaces. All are fully-decoded, to the limits allowed on eight address lines, and work very well. DCP Micro Developments Ltd, 2 Station Close, Lingwood, Norwich NR13 4RX. Tel: 0603-712482.

## Rosetta award in second year

THE SECOND annual Rosetta Stone Award will be presented sometime in April by Mindware Inc for outstanding intellectual achievement on a ZX machine. The award was presented last year to Dr Ian Logan for his work on the ZX-81 ROM. The award is worth $\$ 200$ and one year's free subscription to an American computer journal of the winner's choice.

The winner is also presented with a replica of The Rosetta Stone.

Nominations are being taken at present and the judging will be done by a panel of representatives of American and British magazines. Nominations should be sent as soon as possible to Mindware Inc, 15 Tech Circle, Natick, MA 01760, U.S.A.

## Joystick for all machines

AGF HARDWARE has produced a joystick interface which fits on the expansion port of a ZX-81 or Spectrum and imitates the keyboard. Both versions simulate the cursor keys and the 0 key on Joystick 1 and keys T-Y-U-I-P on Joystick two.

There is no soldering to continued on page 26
continued from page 25 do as the board is plugged into the expansion port and any other devices plug in after it. The joystick is very easy to use and it speeds games enormously. The other advantage is that while it is enabled - via a switch - the rest of the keyboard is inoperable, thus preventing errors. Several programs already work with the joysticks though some require the disabling of the joystick while speeds are chosen. The only disadvantage is the cheap edge connector and the fact that you cannot select which keys are simulated - that would allow an arcade game to be played.

Joystick interface costs $£ 15.96$, Joystick $£ 7.54$ inc.

VAT, from AGF Hardware, 26 Van Gogh Place, Bognor Regis, West Sussex PO22 9BY. Interfaces are accompanied by a free cassette of demonstration programs and instructions how to alter your own.

## University analogue port

AN ANALOGUE port from University Computers is a memory-mapped device and is designed to be used by the ZX-81 Basic instructions PEEK and POKE. It is decoded into 64 locations just below the start of Basic RAM - 15488-15552.

The first eight locations are used as an eightchannel analogue input port and digital eight-bit

University Computers' analogue port
output port. That is an measured. unusual combination and, together with the manual, it can provide a complete demonstration unit for schools.

The board is despatched without a box but with an expansion connector at the back for plugging-in the 16 K RAM pack. Three LEDs are also provided on the board to test the digital port, as is a light sensor to check the analogue input. There is also an amplifier so that voltages in the millivolt range can be

A full circuit diagram is provided and the manual takes you through a very easy course on how to use the port. The same firm can also supply various sensors for heat, light, sound and gas to fit on to the board. It can also supply various relays up to 25 amp 250 V for control applications.

A very good teaching tool at $£ 39.95$ inc. VAT and postage from University Computers, 5 St. Barnabus Road, Cambridge.

## SPECTRUM - ZX81 - BBC

(1) SPECTRUM ANALOGUE PORT (24 channel control) 8 channels digital voltage input (e.g. for switch closure detection).
8 channels digital voltage output (e.g. for driving relays).
8 channels analogue voltage input (for measuring voltages from e.g. transducers). High quality cased unit including all connectors (uses standard 'D type) £49.00 inclusive of comprehensive manual.
Optional terminal box
$£ 33.00$

# Microl packagesare well worth the wait 

CUSTOMERS finally have than one-tenth of the price. started to receive their Compared to the VuSpectrum software pack- Calc spreadsheet producages fromMiCROL and the ed for the Spectrum by general impression of the Sinclair it is much clearer Use and Learn and and slightly easier to Spreadsheet cassettes is understand. Its one failing very good. Use and Learn compared to the Sinclair consists of a software version is that it is slower. cassette and well- The decision when choospresented booklet contain- ing to buy either must be a ing explanation and listings of the programs on the cassette.
The first program is an excellent music composer which draws manuscript lines and notes played on the screen as a tune is composed. When the tune has been completed the composer can listen to the music.

The cassette also contains a variety of novel and interesting games, including one in which you have to make a parachutist jump from an aircraft on to a target.
Also included in Use and Learn is a series of useful routines such as Ramtest to check for faults in memory; Tapefile, which lists your collection of tapes; and Memory Map Monitor, which tells you how much memory for programs and variables you have remaining.

The Spreadsheet, for the 48 K Spectrum, provides the user with a table, or matrix, which can contain numbers or formulae for solving numeric problems. It can be used in business and the home and ciosely resembles VisiCalc for the Apple but is less
trade-off facilities and speed.

Both MiCROL software packages are excellent value for money. Both packages cost £9.95 and can be obtained from MiCROL (U.K. Mail Order), Freepost, 38 Burleigh Street, Cambridge CB1 1BR.

## Armchair golf

IT IS too cold to go and play a round of real golf, so why not settle in your armchair and play a round on the Spectrum? This version of Golf for the 16 K Spectrum shows a graphic view of the holes, rough, trees, fairway and lakes. To make a shot the player selects a number, imagining that the ball is the centre of a clock-face.
You then choose the
 strength of the shot and your ball starts on its way towards the hole - or the lake, depending on how good a player you are.

A variety of penalties are handed-out by the computer when you lard in the rough, in a bunker, or out of bounds. For instance, if you go out of bounds the computer will return your ball but you will have a penalty shot against you. If you land in a bunker, the computer will get you out but again you must suffer a penalty shot.

The computer will recognise special scores such as birdies, eagles and a hole in one. The game is interesting for golf fans but is very unremarkable in the software market as several games of golf, one of them very much like this one, have been produced for the Spectrum already.
Spectrum Golf is available for the 16 K and 48 K versions. It can be obtained from B S McAlley, 78 Hedgerley, Chinnor, Oxon OX9 4TJ and costs $£ 3.95$.

## Pacman gets look a like

ATLAST someone has produced a Pacman game for the 16 K Spectrum which looks like the popular arcade game. The Abbex Spookyman has four ghosts, dots, power blobs, diamonds, hearts, clubs and the cutest Pacman you will ever see.

The keyboard is divided into three vertical sections with Left control on the left, Right control on the right and Up and Down in the centre. The controls take some getting used to but once they are mastered they make the game move faster.

Abbex estimates the total score possible after everyscreen of the game is 22,400 . The player receives a bonus life when 10,000 points have been reached.

Spookyman is available from Abbex, 20 Ashley Close, Manor Hall Drive, London NW 4.

## Spectacular graphics

THE GRAPHICS capabilities of the Spectrum can produce fairly spectacular results, especially with two cassettes from Video Software, Superdraw and Superview.
continued on page 30
continued from page 29
Superdraw is for the 16 K machine and can be used to create pictures, in high and low resolution. All the graphics symbols on the Spectrum are available through the program and a Prestel-type display can be achieved through a special large alphabet which can be loaded into the program separately.
Superview is for the 48 K Spectrum. It acts rather like a personal viewdata system and can hold up to 42 pages of information displayed in two colours and 21 pages in full colour.

The creation of new pages is achieved using a cursor. A large alphabet is also included.
Superview and Superdraw are produced by Video Software Ltd, Stone Lane, Stourbridge, West Midlands DY7 6EQ. Each program costs £5.

# Getting as sick as a Spectrum parrot 

IF YOU have always wanted to manage a football team, Football Manager, from Addictive Games, is for you. The game works on the 48 K Spectrum and charts the career of a professional football team from the Fourth to the First Division.
At the beginning you choose your team, which has a full complement of players. The players can be sold and bought during the progress of the game.
After you have selected your team you will be given a position in the league table, usually at the bottom of the Fourth Division. A team will be selected for
you to play and highlights from the match will be shown to you in 3D. After that a brief rundown of the rest of the day's matches is given and the league table is calculated for the division.
The skills needed are that you must keep a balance between earning money from the gate returns and winning on the field. It seemed that if you do too much of one the other suffers.

The game is ideal for a football fanatic but the most interesting thing for us was the 3D graphics used to create the goalmouth. The league tables, players' records

## Money is the inspiration

SOFTWARE manufacturer J P Gibbons seems to have money on the mind with two new 16 K Spectrum

cassettes just reaching the market. One, Casino 1, is concerned with gambling away money and the other, Personal Banking System, is concerned with saving it.

Casino 1 includes three old favourites, Blackjack, Craps and Roulette. Blackjack and Craps are fairly routine card games where you stake money against the computer pot and, more often than not, lose all of it. The computer seems to hit a winning streak too easily for our liking - perhaps it has a system?

The roulette game is very interesting and we managed to win money from the computer. When the bets have been laid on
the roulette board the wheel is spun and a series of numbers flashes on to the screen. If it stops on your spot you win the pot, if it does not you lose your stake.

Personal Banking System allows a user to keep an accurate record of financial affairs. It will keep track of standing orders and even locate a specific cheque through its number. The system is user-friendly and supports separate data files.

Casino 1 costs £4.95; Personal Banking System costs £9.95, including instruction manual. Both cassettes are available from J P Gibbons AIB, 14 Avalon Road, Orpington, Kent BR6 9AX.
and match results seemed to bear no reflection of real life. For instance, Kevin Keegan is given a very low skill rating and a transfer fee of $£ 5,000$. Apart from that, the game is a winner.

Football Manager costs £7.95 and can be obtained from Addictive Games, PO Box 278, Conniburrow, Milton Keynes MK14 7NE.

## If you read the book . . .

MELBOURNE HOUSE, the publisher, has a range of software cassettes to supplement a range of microcomputer books it has just launched. Spectrum 3 is a tape which contains several of the programs printed in the book Over the Spectrum.

The first two programs, Leapfrog and Number Reversal, are very simple games and use block graphics, no colour and no sound. The idea behind both is to get into correct order a number of randomly-situated objects, such as numbers or frogs, which are in a line. To do so you enter the number of items you want swapped.

The other programs on the tape are much better and make up for the simplicity of the first games.

Over the Spectrum 3 should be used in conjunction with the book of the same name. In that way the user will learn about the programs in the book

The tape costs $£ 4.95$ and is available from Melbourne House Group, Glebe Cottage, Station Road, Cheddington, Leighton Buzzard, Bedfordshire LU7 7NA.

## A Spectrum collection

IF YOU made a list of the programs for the Spectrum which you never wanted to see again, would it include Sketchpad, Lunar Lander and Mastermind? In its hurry to produce for the Spectrum, Spectrum Software has put all three programs, with some others, on to one cassette.
Sketchpad can be used to draw pictures using a cursor, the circle command and the Draw command. The pictures can then be saved on to cassette tape.

Lunar Lander and Mastermind are both fairly standard programs. The lander program gives you a spacecraft to land, using the cursor keys, on the surface of the moon. The problem with most of the programs is that you must ensure that the computer is in CAPS mode or the programs will not respond to commands.

On side two of the cassette is a character generator which will allow you to define your own character set. When it has been defined the new character set can be viewed on screen and SAVEd.

The redeeming feature of this package is the diassembler on side two of the cassette. You can list machine code in standard Z-80 mnemonics or assemble your own Z-80 program

into machine code. The program is very compact, user-friendly and relatively crashproof.

The package, called Spectrum Software, is available from Spectrum Software, 44-48 Magdalen Street, Norwich, Norfolk NR3 1JE. All five programs can be obtained for $£ 7.95$ or you can have any two for $£ 4.95$.

## New ZX-81 ideas

MICROMEGA, renowned for its business software on the ZX-81, has a cassette of machine code games for the little machine. Challenge, for the 1 K ZX-81, presents some original and clever ideas. Two of our favourites are Cartoon Man and Juggler. In the first a little man walks across the screen. You can control his movement using the shift and BREAK keys and increase his speed using number keys.

Juggler is almost the same but he juggles while moving. The idea is to keep the balls in the air.

Road Race is a fast action racing game, a race between two cars on a map, starting in London. The cars are on separate roads but you can go on to your opponent's road during the game. If you cross on to the other car's road in London you cannot pass but if you change in

## Galaxy battle sets a new trend

GALAXY CONFLICT is one of the first games to be produced following a new trend in ZX-81 software, called computer moderated gaming. Two people can play the game. They make their moves with plastic counters on a playing board which has on it a map of a fictional area in space.

The object is to become ruler of the galaxy by building Eoncruisers and maintaining them on planet stations if they are damaged during conflict. A player may take com-

Scotland he cannot pass you.

Challenge contains five machine code games for the $1 \mathrm{~K} \mathrm{ZX}-81$ and can be obtained from Micromega, Personal Computer Division, Quantec Systems and Software Ltd, 230-236 Lavender Hill, London SW 11 1LE. It costs $£ 4.95$.

mand of any planet station or can take over the bridge of one of the Eoncruisers.

The game played by the computer is a very complex one. Even the amount of wear taken by a mesongun during firing is taken into account.
Players must be very careful to preserve sufficient energy on their planet stations.

Martech, which produces the game says that a leader must have the ability to think clearly, plan ahead and develop a tactical approach to the conflict which will win the prize of galactic control in the end.

Galaxy Conflict, for the $16 \mathrm{~K} \mathrm{ZX}-81$, is available from Martech Games, 9 Dillingburgh Road, Eastbourne, East Sussex BN20 8LY. It costs £9.95.

## Better part of Sinclair range

THE NEW Flight Simulation program from the Sinclair Research Spectrum software library is one of the better offerings in that range. The program runs on a 48 K Spectrum and gives you the opportunity, for a short time at least, to become the pilot of a light aircraft.

The program is very interesting and better value than some of the other Sinclair programs.

Flight Simulation costs $£ 7.95$ and is available from Sinclair Research, Stanhope Road, Camberley, Surrey GU15 3PS.

At last there's a really cheap but efficient way of ironing out the ZX81's only real bug: its keyboard. The Filesixty Buttonset offers

- A full-travel calculator-type moving keyboard for only $£ 9.95$.

■ Installed in seconds.The peel-off adhesive backing means you just register into position and press.

- No messy labels, dismantling or soldering.
- 3 groups of colour keys to pick out shift, numerals and newline.
- Precision moulded in ABS to match your ZX81, with contrasting legends for maximum legibility.

Allow up to 28 days for delivery.
Orders to Filesixty Ltd, 25 Chippenham Mews, London W9 2AN.
Cheques/PO made payable to Filesixty Ltd.
Please send me $\qquad$ (qty.) Buttonset(s) at £9.95 each (including VAT and P\&P).

## ANDREW HEWSON'S BOOKS

Program titles include:
Machine Code Editor - Write, modify, extend and load machine code using this all-basic program. No need to use an Assembler when you have this program.
Index File - Learn about fixed length records, save numeric and string information, add to, sort, modify, delete and print your records. Ideal as a computer based filing system.
Duckshoot - Learn how to manipulate the attributes file and have fun at the same time.
Graphix - Construct up to 210 graphics characters with the full on-screen editing facilities, enhance and modify them and recall them later to build a detailed display to save on cassette.
Spiromania - A program to stretch your artistic talents, imagination and ingenuity. Draws a limitless variety of curves and spirals.
Plus: FOOTBALL, DIGITISER, DIARY and many more.
Available through Computer Bookshops and W.H. SMITH.

## Z80 OP CODES

£1.45
A must for the Deginnet and the expenenced programm
alike. This hand ready reckoner lats all 600 plus 280 alae This hand ready reckoner lats all 600 pliss 280 Machine code instructions in decimal and hexadecimal with
inerr mneumanics Each Op Code is succinctly explained and cross-referenced Supplied in a protective transparent waliet
for ens. for sasy reference and durability.

## PILOT ZX81

Essentially the same as Nightflite but without the hi res graphics.

## PUCKMAN ZX81

All action display. Best score to date, scour the maze for food, dodge the ghost, eat a strawberry and attack the ghosts.

## HINTS \& TIPS FOR THE ZX81

£3.95
Available by direct mail order or through computer bookshops and W.H. Smith.

## THE PROGRAMS

The programs advertised here are available from computer bookshops with a software stand, and many independent micro-computer shops.

## RETAILERS

We are continually on the look out for new outlets. If you are interested in stocking the items advertised here, write to us for our trade rates.

## URGENT

We require high quality Spectrum and Dragon software. Good royalties paid. Send your samples today for fast evaluation.

## FOR THE SPECTRUM

## 40 BEST MACHINE CODE ROUTINES FOR THE ZX SPECTRUM <br> by Andrew Hewson and John Hardman.

Section A: Three chapters explaining what you need to know about Z80 machine code on the Spectrum.

* How to load and save machine code.
* How to use the system variables.
* How memory is organised.
* How program lines are stored.
* How to use the stack, the display, the attribute files.
* How to call ROM routines - where they are and what they do.
* The structure of $\mathbf{Z 8 0}$ code - plus a valuable glossary.

Section B: 40 routines including,

* Scroll - up, down, side to side by pixel or by character.
* Search and replace, token swap, string search.
* Rotate character, invert character - horizontally and vertically.
* Line renumber - including GOSUBs, GOTOs, RUN etc.

All routines are relocatable (except 'line renumber')
This book teaches the beginner all he needs to know in a simple, easy-to-learn form and its an invaluable reference work for the expert tool

## NIGHTFLITE FOR ZX SPECTRUM £5.95

## Great games for your Spectrum

 from

## Sorcerer's Castle

Takes you into a world of magic and mystery. Graphical position and a host of options with this exciting adventure game for the 48 K Spectrum

## Scramble

High-speed arcade game - the fastest available. Thrust, altitude, fire and bomb controls. For 16 K or 48 K Spectrum.

## Masterchess

Ten levels of play + change sides or level in mid-game + set board to any position + scrolling history + displays your moves and computer's + copy display \& history to printer any time + save game at any point + recommend move option + plays all legal moves + indicates illegal moves + Chess Clock on reverse. A powerful, adventurous and enjoyable 48 K program

# Inexpensive maths aid goes into production for ZX-81 

THE ZEAKER is an electronic device controlled by a ZX-81 through two 2 -metre long cables. It consists of a black box with wheels on either side and four sensors mounted on each corner. The motions of each of the wheels can be turned on and off under program control, so that it can be steered by the computer in much the same way as a tank. The motors can also be programmed to go forward and reverse, so that the zeaker can retract from a wall.
The sensors can be used to detect obstructions around the zeaker. The sensors consist of metal plates which are curved around each corner of the zeaker and spring-loaded so that it is held away from the box.

Fixed to the box under the plate are two adjustable metal stubs which form the other half of the switch. When the zeaker hits an obstruction the metal plate touches the metal stub on that side of the corner and completes the circuit. That can be detected by the computer by PEEKing a location in memory. There are four corners, each having two sensors, one on each side of the corner beneath the metal plate, making eight sensors in all.

The zeaker also contains a loudspeaker which is connected to two oscillators inside the interface box. They produce a two-tone horn - which can be switched on and off under program control to indicate obstructions and turning.

There are also three LEDs mounted on top of the zeaker. Two of them can be turned on under program control and the third is used to indicate that the pen. which is underneath the zeaker, is in the
down position. The pen is the really important part. It turns it into a turtle-type creature which can be used by teachers to describe mathematics to children in a visual way. The pen is operated by a solenoid mounted in the body of the zeaker which is lowered under the command of the ZX-81. It consists of a cut-down ball-point refill and so is simple enough to replace when it runs out. The pen can be used to follow the motion of the animal and can be raised and lowered at any time.

A program usually associated with drawing by computers through a programmed device like the zeaker is called Logo. Although not available on the ZX-81, a similar set of commands is available via a program on tape with every zeaker. The zeaker can learn a set pattern and
> 'The zeaker can learn a set pattern and with its pen can repeat that pattern'

with its pen in tow can repeat that pattern at any time.

If that pattern is the result of a formula or program, the results can be illustrated graphically by running the zeaker over a large sheet of paper and watching the results. If there is a bug in the program the place where it appears will be shown by the trace: thus it is a very simple method of getting children - and I suspect even adults - to program a
computer and see if the answer is correct. If the answer is incorrect the trace will give the exact position of the error, so that it can be corrected easily.

The program in Basic is used to POKE and PEEK at a memory location where a port has been inserted. The demonstration model was running on a Technomatics port but, being Basic, the port used could be any memory-mapped port which provides two eight-bit ports, one input and one output.
The port is not included in the price of the zeaker and Technomatics is understood to have ceased production of the port. That should not affect zeaker users, as Colne has said that it will undertake to supply a similar port at the same price.

The port presents the user with two 16 -pin DIL sockets which provide the interface box containing all the electronics and power supply, with eight wires for input, eight wires for output to the zeaker, plus 0 V and +5 V connections to the computer.

The interface box contains the motor control circuitry for forward and reverse, as well as on and off for both the motors inside the zeaker. It also contains protection circuitry so that it cannot be programmed to go in two directions at once. The interface box is between the port whichis attached to the expansion port of the computer and the zeaker and is connected to both via ribbon cables. The ribbon cables are two metres long and so allow the zeaker to roam from the ZX-81. Both ends are terminated in two 16 -pin DIL plugs so that they fit into the sockets on the top of the zeaker and the port.

The interface cables to the port

would have to be altered if a different port was used but Colne says it could provide a set of cables for commonly-used ports. The connections, however, will be listed in the manual so that they can be changed over easily.

The zeaker is available as a kit, as well as ready-built, as is the interface box. The two are available together as one package. Construction should not be difficult. The manual includes the circuit diagram, port description - for those who want to use another one - and details of the control codes used. The principles of operation also include tips on how to write your own programs, as well as describing the ones provided.

Two 1 K programs provide a demonstration of random action of the zeaker and a 'learning phase', one which allows you to enter a few commands telling where to go. Two 16 K programs are also included they should take up only about 8 K , in fact - and once again demonstrate random action, plus a learning function.

The learning function is much more comprehensive than on the 1 K machine in that it will allow you to use letters of the commands to program the action of the zeaker. The
basic functions will be F (foward). B(backward), L(Left), R(Right). PU(Pen Up) and PD(Pen Down). Those letters are accompanied by a number describing how many steps are to be done under each command.

The commands are combined into a string and then the zeaker is asked to execute the set of commands, which may also be given a name and the ZX-81 told to execute name. That leads to programs made up of a series of command words like box
> 'The zeaker with interface and port is robust and very simple to use'

and triangle. To test one of the programs before trying it on the computer, a child can be asked to go through the same series of steps, imitating a zeaker, to check that the program which has been written can be understood.

Schools and colleges have not generally accepted this method of demonstrating computers because
of the previous cost of a few hundred pounds each. Now that the cost of microcomputing power is down to £49.95, Colne has produced this version which will sell at $£ 59.95$ as a kit or $£ 69.95$ assembled. Remember that does not include the cost of the port required torun it - it cannot be connected directly to the ZX-81 expansion port. The price includes the interface box, the zeaker and power supply. A port can be supplied at approximately £13.

The size of the zeaker is $51 / 2 \mathrm{in} . \times$ $5 \mathrm{in} . \times 2 \mathrm{in}$. and it has four ZX-81 programs in Basic. The interfaces and programs could be adapted easily to most computers with a user port.

The Spectrum, Sinclair says, will soon have a version of Logo written for it as part of the package offered under the schools scheme. As there are already ports available for the Spectrum and the Spectrum Basic is ZX-81-based there should be no difficulty using it on either machine using IN and OUT instead of PEEK and POKE.

The zeaker and interface box, along with the port, was demonstrated by the company for Sinclair User and is robust and very simple to use. Colne Robotic Ltd is at 2 Station Road, Twickenham TW1 4LL. Tel: 01-892 7044.

## Play curlygons for a novel design

 Variations on a polygon theme by Ian Stewart with the Spectrum in supportAN ARRESTING title, as the policeman said to Lady Chatterley, no doubt referring to a species of Klingon with poodleywool hair. He's going to tell us how to write Space Inveigler games better than that - Spectrum graphics.

The result will be a very simple 14 -line program which produces an enormous variety of attractive graphic displays on the Spectrum hires screen. Incorporate it as a subroutine in other equally simple programs and you will be able to cover the screen in intriguing and complex designs, all of them fraught with deep mathematical significance which, fortunately, it is unnecessary to understand to produce the results.

The fundamental principle used is one which pervades the entire
computing world. Once you have had one good idea, do not waste effort looking for another one hack the first one to death instead. Or, to put it more tactfully, apply the technique of variations on a theme.
The theme here is the humble
be coaxed into doing everything else.

The most symmetric polygons are the regular ones, which are very democratic - all angles are equal, and all sides are equal. The 50 pence coin is a seven-sided regular polygon with slightly curved sides. A square is a four-sided regular polygon. Honeycombs are formed from regular six-sided polygons hexagons.

Let us consider a regular hexagon. Here is one:

Notice that I have drawn it inside a circle, to show that its corners are all equal distances from its centre. Notice also that the angles divide the full circle of 360 degrees into six equal portions. So each angle is 60 degrees. If the polygon had $n$ sides, then the angle wold be $360 \% \mathrm{n}$. Mathematicians call this "putting $6=\mathrm{n}$ " or inductive reasoning.
Now all we need is some elementary trigonometry, which I will explain. Get out the stepladder, climb into the attic, and haul down
> 'Incorporate it as a subroutine in other equally simple programs and you can cover the screen in complex designs'
polygon - I won't stoop to mention the schoolboy joke about dead parrots. A polygon is a shape made up of straight lines, which immediately sets one in mind of the Spectrum DRAW command. If we can find where the corners of the polygon should be, the machine can
your May issue of Sinclair User; look at the article Triggy questions by me. It will tell you that to get things moving in circles you use the functions SIN and COS. If you want a circle of radius r you have to plot points $\mathrm{r}^{*} \mathrm{COS} x, \mathrm{r}^{*} \operatorname{SIN} \mathrm{x}$, as x varies continued on page 40
continued from page 39
from 0 degrees to 360 degrees, or rather, there being a mathematician somewhere in the Sinclair camp, from 0 to $2^{*}$ PI radians. $\mathrm{PI}=$ key M in extended mode.

What we have to do is to divide that $2^{*}$ PI range into $n$ equal bits; obviously we do taking and one nth of it, $2^{*} \mathrm{PI} / \mathrm{n}$, and them (multiples of that, $1^{\star} 2^{\star} \mathrm{PI} / \mathrm{n}$ for $\mathrm{i}=0,1,2, \ldots, n$. So the corners of a regular polygon of radius $r$ and centre 0,0 , lie at points whose co-ordinates are:
$r^{\star} \operatorname{COS}\left(\mathrm{i}^{*} 2^{*} \mathrm{PI} / \mathrm{n}\right), \mathrm{r}^{\star} \operatorname{SIN}\left(\mathrm{i}^{\star}+/ \mathrm{PI} / \mathrm{n}\right)$.
So we are left with this program:
10 PRINT "Polygon"
20 INPUT "Number of sides", n.
30 INPUT "Centre", $x ;{ }^{\prime \prime} \square$ "; $y$
40 INPUT "'radius", r
50 IF $\mathrm{x}+\mathrm{r}>255$ OR $\mathrm{r}>\mathrm{x}$ OR $\mathrm{r}<\mathrm{y}$ OR $\mathrm{y}+\mathrm{r}>175$ THEN INPUT "off edge", d\$: GO TO 20.

## $60 \mathrm{FOR} \mathrm{i}=0 \mathrm{TO} \mathrm{n}$

70 LET $\mathrm{u}=\mathrm{x}+\mathrm{r}^{\star} \operatorname{COS}\left(\mathrm{i}^{\star} 2^{\star} \mathrm{PI} / \mathrm{n}\right)$
80 LET $v=y+r^{\star} \operatorname{SIN}\left(i^{\star} 2^{*} \mathrm{PI} / \mathrm{n}\right)$
$90 \mathrm{IFi}=\varnothing$ THEN PLOT u,v:GO TO 110

100 DRAW u - PEEK 23677,
v-PEEK 23678
110 NEXT i

## $\square=$ space

Before I explain, type this into your Spectrum and RUN it. INPUT in turn the numbers $7,127,87,75$ for $n$, $x, y, r$. You will have a big heptagon - seven-sided thingy - in the centre of the screen.

Now the details. First, everything I have said so far assumes that the centre of the polygon is 0,0 . Unfortunately that is the bottom left-hand corner of the screen. To adjust to a general centre $x, y \quad(0 \leq x \leq 255$, $0 \leq y \leq 175$ ) you have to add the x and $y$ lines 70 and 80 .

Line 50 is crashproofing; it makes sure your picture does not go offscreen and thus offend the operating system of the Spectrum.

Line 100 could have been made PEEKless but is such a useful trick that it deserves to be mentioned. The system variables in addresses 23677 and 23678 hold the coordinates $x 0$ and y0, say, of the last point PLOTted. A DRAW command on the Spectrum draws from that point to a point offset from it by the
numbers in the DRAW command. In other words,

DRAW u,v
draws from $\mathrm{x} 0, \mathrm{y} 0$ to $\mathrm{x} 0+\mathrm{u}, \mathrm{y} 0+\mathrm{v}$. That is useful for some applications and a nuisance for others; what you often want is to draw from $x 0, y 0$ to u,v. You can write

DRAW u-x0, y-v0
to achieve this but then you need to remember $x 0$ and y0 in the program and watch for rounding errors in arithmetic. Instead, you can "lift" their values from the operating system using PEEK.

That is the theme program; now for variations. One thing which is easy to do is to twist the polygon into a less regular but still very artistic shape. To that you add the line:

45 INPUT "twists" ,s; " $\square$ ";t
and change 70 and 80 slightly with the EDIT key:

70 LET u = $x+r^{\star} \operatorname{COS}\left(s+i^{\star} 2^{\star} P I / n\right)$

80 LET $v=y+r^{\star} \operatorname{SIN}\left(t+i^{*} 2^{*} P I / n\right)$
Another item to exploit is that the Spectrum can draw curved lines. So add:
Figure 1

48 INPUT "bend",b and modify line 100 :

100 DRAW u-PEEK 23677, v-PEEK 23678,-b

Then there are more numbers to input. I suggest you go gently at first; for s,t, and b try smallish things like $0.5,1,1.5$. They can be negative, too. there are two typical samples of the results in figure one.
$n \mathrm{n}$ yrstb
n x y r stb
That is still not all. If you embed that as a subroutine in a program which goes round a FOR/ NEXT loop, generating values for $\mathrm{n}, \mathrm{x}, \mathrm{y}, \mathrm{r}, \mathrm{s}, \mathrm{t}, \mathrm{b}$ and plotting the resulting curlygons on top of each other, you can get very complex results. You can generate the numbers at random or according to a pattern. Here are two samples add these lines and RUN. The old line 10 is deleted deliberately.
(a) 10 FOR $1=10$

11 LET $\mathrm{n}=\mathrm{INT}(3+12 * \mathrm{RND})$
12 LET $\mathrm{x}=127:$ LET $\mathrm{y}=87$
13 LET $\mathrm{r}=\operatorname{INT}\left(1+80^{*}\right.$ RND $)$
14 LET $\mathrm{s}=\emptyset:$ LET $\mathrm{t}=\emptyset:$ LET b= $\varnothing$
15 GO TO 50
120 NEXT q
(b) $10 \mathrm{FOR} \mathrm{q}=1$ TO 10

11 LET $\mathrm{n}=\mathrm{q}+2$
12 LET $\mathrm{x}=100+5^{*} \mathrm{q}$ : LET
$y=50+5^{\star} q$
13 LET $\mathrm{r}=40$
14 LET $\mathrm{s}=\mathrm{q} / 10:$ LET $\mathrm{t}=\mathrm{q} / 5$
15 LET $b=q / 3$
16 GOTO 50
$120=$ NEXT q
Even then you can add colour commands, or print OVER $\times$, or that is the trouble with an idea, even a simple one; it's amazingly difficult to hack it to death altogether.

## INSTANT IMAGE TRANSFER TO ZX SPECTRUM

## RD DIGITAL TRACER £49.95

 originals)

RD DIGITAL TRACER(S) at
£49.95 each. I enclose payment of $£$ $\qquad$
Name:
Address:

Send to: RD Laboratories, Dept. YCS, 5 Kennedy Road, Dane End, Ware, Herts. SG12 OLU.

RD Laboratories policy is to bring sophisticated computer techniques to low-cost computing RD Laboratories therefore maintain the right to amend specifications at short notice. Please send for further details of the RD DIGITAL TRACER, and the RD 8100 SYSTEM for automatic monitoring, test and control.

The high resolution colour graphics of The ZX Spectrum permit accurate presentation of complex or irregular images - maps, technical drawings, even personalities. But entering individual coordinates for unusual shapes can be tedious and time-consuming.

The new RD DIGITAL TRACER cuts out much tedious plotting. It provides instant transfer from original to display file - for screen display in colour, ZX printer printout, or retention on cassette.

The RD DIGITAL TRACER is of immense benefit in many fields - for geographers and weathermen, for engineers, architects and technicians, even for budding Leonardos! Designed for use with the ZX Spectrum, the RD DIGITAL TRACER as supplied is compatible with ZX 81, although high-resolution colour graphics cannot be obtained on this machine.

The RD DIGITAL TRACER is available only from RD Laboratories. The price of $£ 49.95$ includes P \& P and VAT. Send your cheque now for delivery in 28 days. (Cheques payable to "RD Laboratories".) The RD DIGITAL TRACER is supplied with tracing sheet, software cassette, and full instructions on use.

## Our easy-to-follow guide for new owners of the ZX-81 and the Spectrum <br> The basic route to a habit-forming hobby

BUYING a Sinclair machine can be the start of a life-time's obsession with home computing. It is easy, however, to become discouraged if everything does not go according to plan from the beginning.
For those with only a little knowledge of computers and their capabilities, the best way to approach the machines is to abandon any ideas for special uses. While the 48 K Spectrum is big enough for simple uses in small businesses, the range of Sinclair computers does not contain machines for major uses. It is better to become accustomed to the many facilities and then decide how you wish to use them.
Begin by unpacking your machine, overcoming your surprise at its size and weight and, following the manual, set up the system. If you cannot get the K on the screen, check that everything is plugged into its correct socket and re-set the machine by pulling-out the power plug for one second and try tuning-in again. If still nothing appears, check the power supply unit by shaking it. If it rattles, return it. If it is satisfactory, check your system with that of a friend.
If you have a Spectrum you will have received an introductory book-
let which explains what the computer can do and giving detailed instructions on how to set it up. Also included is a fault-finding guide.
Once the K appears you are ready to begin learning about your machine. It can prevent family arguments if you can afford a separate television set for your systems. It also makes life easier if you find somewhere to leave your equipment set up permanently. You will find
sets, which include Hitachi, Grundig and Toshiba. Sets which many people have found compatible include the Sony Trinitron, Fidelity and Ferguson.
The manuals are written in great detail and are reasonably easy to follow. Some of the chapters may not seem immediately relevant but it is worthwhile reading them as you might miss something important.

Patience is needed at that stage to learn the ways in which the computer will accept information. It is tempting to try to enter programs before you are ready but that is likely to lead to errors. For example, words like AND, THEN and AT should not be typed-in letter by letter.

By the time you have reached chapter 11 in the ZX-81 manual and chapter 19 in the Spectrum manual you should have accumulated sufficient knowledge to be able to type-in other people's programs, such as those in Sinclair User and Sinclair Programs, without too much difficulty.

It is important that when using the ZX-81 it is not jolted. Some of the connections can easily work loose and everything which has been put in will be lost.
The manuals are not to everyone's liking and if you find them difficult
> 'For those with only a little knowledge the best way to approach the machines is to abandon any ideas for special uses'
that a few power sockets are needed and a four-way block connector on a short length of extension cable will help to tidy training leads.
When using a Spectrum, a television set has to be more finelytuned than when using a ZX-81 because of the added dimension of colour. If the set is not tuned properly, the colours will look hazy instead of sharp and clear. If no colour can be seen when it is switched on, the power supply or the television may be at fault.

Some users have experienced some difficulty with some television
to follow a number of books on the market can help you. Find the one which suits you best.

As a way of relaxing you can buy some of the growing range of com-mercially-produced software. That can be loaded directly from cassette but make sure that your machine is big enough to take the tapes you buy.

For the ZX-81 there are a few tapes for the unexpanded 1 K machine but the majority require the 16 K RAM pack. Similarly on the Spectrum most companies are taking advantage of the possibilities
continued on page 44
continued from page 43
provided by the larger 48 K machine rather than providing cassettes for the 16 K .

The tapes can vary in quality and it is advisable to read the reviews in Sinclair User and use your judgment to find the best.

An alternative method to learn about both the ZX-81 and the Spectrum is to plunge in at the deep end and see what the machines will do. Refer to the manuals when you have difficulties. You can ignore the functions and calculations initially and experiment with PRINT statements to obtain the feel of the machines.

You may already have heard about the problem involved in SAVEing and LOADing your own cassettes. The manual gives detailed instructions but many of the early ZX-81s would not accept tapes from some recorders. That problem is said to have been overcome but
there can still be difficulties. Usually they occur when LOADing tapes recorded by other people. One simple method to over-come this is to wind the tape to the middle of the program and type LOAD "" " followed by NEWLINE; then increase the volume of the recorder slowly with the tape running until the television screen shows four or five thick black bands. If you then re-wind the tape, the program should LOAD normally.

LOADing and SAVEing on the Spectrum is much easier and faster than the ZX-81. One difference is that when SAVEing on the Spectrum the LOAD lead must be disconnected either at the recorder or the Spectrum.

Finally, a health warning. Apart from any practical uses, computing with your Sinclair machine can be a very entertaining hobby and is almost certainly habit-forming. You may easily find yourself crouched

over your machine, red-eyed, in the early hours of the morning thinking that in another five minutes you will solve the problem. Try to break that habit by getting into the fresh air and meeting other Sinclair users.

By obtaining a Sinclair computer you find that you have joined a not very exclusive club with many thousands of members, many of whom would be only too happy to advise you if you have difficulties.

Make sure of your regular copies of Sinclair User and Sinclair Programs and you can be guaranteed many happy hours with your Sinclair machine.

## At Last Vour ChanceTo Crune! The Machine Code

## ZX81 and SPECTRUM OWNERS

* If you are interested in finding out how a computer REALLY works and want to experience TRUE PROGRAMMING POWER - THE MACHINE CODE TEST TOOL is the answer.
* The MACHINE CODE TEST TOOL is a utility program which comes complete with tutorial course enabling you to enter, test, display and debug hexadecimal machine codes simply and quickly.
* THE MACHINE CODE TEST TOOL is constructed to help the absolute beginner who wishes to explore this fascinating subject, or the expert keen to polish up his machine code programs.
* A HEX: decimal conversion routine is contained within the program as standard.

## Use your computer in the case... Foam rubber gives complete protection... Purpose-built for the ZX system...

 ZX81\&Spectrum Custom Cases.

## Turn your ZX system

 into a portable computing centre!Your ZX hardware-ZX81 or Spectrumis designed to work together as a system. And now there's a simple way to make the most of the fact.

The portable computing centre in a briefcase.
A ZX Custom Case holds all your hardware in the most ergonomically sensible positions for easy operation. Each

> ZX Spectum Custom Case now avallable!

piece of equipment is gripped securely by shock-absorbing foam. Each connecting lead fits under the foam, so there's no chance of tangles. And as each piece is held firmly, connections are excellent. You can forget wasted time setting up or unhooking the system, too. When you've finished, simply tuck in the mains and TV leads and replace the hinged, lift-off lid. And of course, if you're taking your ZX system to college or the office, ZX Custom Cases are a lot less cumbersome than a bag or rucksack. And a lot more protective and professional.

Designed by ZX enthusiasts -
for $\mathbf{Z X}$ enthusiasts.
Both the ZX81 and Spectrum Custom Cases were designed by a group of ZX system users and manufactured by Britain's leading case makers. Made from impactresistant ABS, each case holds every piece of Sinclair hardware available for the respective computers - plus Learning Lab, manual, software cassettes and any cassette player up to $10^{1 / 2^{\prime \prime}} \times 5^{1 / 2^{\prime \prime}}$. If you haven't all the hardware, simply leave the pre-cut foam in position, then remove it as you get extra pieces of equipment.

And when brand new hardware is introduced, or you upgrade from ZX81 to Spectrum, simply contact us for a replacement foam insert for just $£ 4.95(+p \mathcal{E} p)$.

Send for your ZX Custom Case-now!
ZX81 and Spectrum Custom Cases are guaranteed for two years, and cost just $£ 34.95$ ( + p\&p) each. Remember you could pay more for an ordinary briefcase.

To order, simply use the FREEPOST coupon. Or if you have a credit card, telephone 0276 62155, Mon-Fri, 9.30-5.30.

## GAMES FOR 16K SPECTRUM

## SUPERPLAY-1f5

by William Smith
Five different games, some of them entirely original, which should appeal to fourteen year olds of all ages!
Using a combination of BASIC and machine code - for extra zip this cassette contains the following
KONGO Move your man along girders and up ladders to reach the terrible kongo. Avoid the deadly patches of red jelly and watch out for kongo's patrolling warriors.
ROBOT RESCUE Guide your ship through a meteor storm to reach the landing pad and bring the stranded astronaut back to the mother ship.

## HIGHWAY RUNNER Get your

 family of frogs safely across the M1.BIG GAME HUNTER shoot the advancing hordes of wild lions and thinos.
UFO Protect your planet from the aliens with their deadly torpedoes. Be sure you don't exhaust your supply of lasers.

## ALL FIVE GAMES FOR $f 5$.

All games feature high score and on-screen score total.

SOLO- WHIST £5
by J.A. Yates
This is an excellent simulation of the well known card game and makes a fascinating change from the usual arcade type computer game.

The computer deals the cards and you play your hand against three opponents who are controlted by the computer

A running total of tricks won is kept on the screen and you have to use considerable skill to beat the computer

The graphics are of a high standard and you will soon forget that you are using a computer and you will become absorbed in the battle of wits with your three hard bitten opponents.

# David Anderson and Ian Morrison give a number of tips on memory saving 

# Easy ways of getting quart into a pint pot 

AS MANY of the thousands of ZX-81 owners will know, the 1 K memory provided in the basic machine is often insufficient for even the simplest of programs. That can leave the user frustrated as he thinks of the program he could have written had he bought a 16 K RAM pack. Therefore any bytes of memory which can be saved in a program are of great importance.

There are many ways in which vital bytes can be saved on a 1 K machine. Once mastered, the user will discover that his computer is very versatile.
The ZX-81 $1 \mathrm{~K}-1,024$ bytes - of memory is filled with 124 bytes used by the machine as its system variables; $x$ bytes for the program; $y$ bytes for the display file - varies depending on how much is printed - and finally $z$ bytes for the variables defined during the program.

Each line in a ZX-81 program takes five bytes as soon as it is entered - two bytes for the line number, two more for the length of line, and one byte at the end for the NEWLINE. Anything typed in the line will take up more bytes. Thus REM statements should be removed as a needless waste of memory, as they serve no useful purpose except in a machine code program.

More memory can be saved by making one line out of two. Thus:
10 LET G $=15$
20 IF INKEY\$ $=" 5$ ". THEN LET
$\mathrm{G}=\mathrm{G}-1$
30 IF INKEY $\$=" 8$ " THEN LET
$\mathrm{G}=\mathrm{G}+1$
40 GOTO 20
can be replaced by
10 LET G $=15$
20 LET G $=\mathrm{G}+\left(\right.$ INKEY\$ $\left.={ }^{\prime} 8{ }^{\prime}{ }^{\prime}\right)-$
(INKEY\$ = " 5 ")

## 30 GOTO 20

The removing of one line saves the five bytes which are taken up by each line and because of that saving the program will RUN considerably faster.

The method shown, making two INKEY\$ lines into one, is a type of conditional statement similar to IF. The condition inside the brackets can either be correct or incorrect. If it is correct the result of the brackets will be 1 but if it is incorrect the result of the brackets will be 0 . Therefore if the user were pressing " 8 ", the result of the first bracket would be 1 and the second would be 0 . Under those circumstances $G$ would increase by one. An

## 'Constants will save memory only if the number is used three or more times

expansion of the system is shown in the following two programs:

## Original

10 LET G = 15
20 IF INKEY\$ $=" 5$ " THEN LET
$\mathrm{G}=\mathrm{G}-1$
30 IF INKEY\$ $=" 8$ " THEN LET

## $\mathrm{G}=\mathrm{G}+1$

40 IF $\mathrm{G}<0$ THEN LET $\mathrm{G}=0$
50 IF G $>30$ THEN LET G $=30$
60 GOTO 20

## After revision

10 LET G $=15$
20 LET G $=$ G-(INKEY $\$=$ " 5 ' AND
$\mathrm{G}>0)+($ INKEY $\$=" 8$ " and $\mathrm{G}<30)$ 30 GOTO 20

Probably the most effective and possibly the simplest method of saving memory is by the use of constants which are non-varying
variables. First, you define a variable e.g., 10 LET $\mathrm{N}=$ a number used more than twice in the program, at the start of the program and wherever that number appears in the program substitute it with the variable.

As proof of its effectiveness, 0.9 K was saved in a 16 K program by the use of only one constant - zero.

In a program line a number is stored as follows:

Number as it Byte Exponent Four mantissa
appears in containing Byte appears in containing Byte bytes the program $126-(7$ Ehex)
storage of the number ten
$1,0 \quad 126 \quad 132$
32.0.0.0

When using a variable the number will take up only one byte of memory. Constants will save memory only if the number is used three times or more in the program.

If, however, there is a number in a program which is used only once or twice there are two more relativelyefficient methods of saving memory in this.

If the number is between 0 and 255 , the function CODE can be used: 10 LET T = 14
can be replaced by:
10 LET T = CODE ${ }^{*}$ :
That will save four bytes of memory. This method will be effective for those numbers which have a character assigned to them but will not work for those numbers 67 to 127, as they are not used in the ZX-81 character set.

The second method is for those numbers above 255 or between 67 and 127. It makes use of the function VAL, thus: 10 LET V $=300$
would become
10 LET V = VAL " 300 "
The use of VAL will save three bytes of memory.

Numbers above 999 which can be written easily in scientific notation should be written in scientific notation in conjunction with VAL, which will save even more memory - 10,000 can become VAL " $10000^{\prime \prime}$ which can become shortened even further to VAL "1E4" which saves another two bytes.

After all those methods have been employed there are still a few more ways of finding those extra bytes. A 0 can be replaced by NOT PI. That takes up two bytes and saves five bytes over the seven-byte number zero. A " 1 " can be replaced by SGN PI. That uses only two bytes and saves five bytes over the seven-byte number one. A " 3 " can be replaced by using INT PI, which also saves five bytes.

Galaxians is a simple 1 K invaders program which makes use of the whole screen area. There are four
types of invaders - on-screen display of base, missile and alien plus score, highest score and highest scorer's name. All those superb features are achieved by some powerful memory-saving programming.

The features to note in the LISTING are the absence of REM statements, as few numbers used as possible and the use of four constants. Conditional brackets are also put to their fullest use.

Four constants are used R,N,U, and $W$ which are set in lines 2 to 5 . They are followed by the variables $\mathrm{H} \$, \mathrm{H}, \mathrm{S}, \mathrm{P}, \mathrm{X}, \mathrm{Y}$ and A \$ in lines 6 to 90.

The FOR - NEXT loop T is used to move the invader down the screen. That is the most effective way of doing it.

Line 110 is the INKEY\$ line which controls the movement of the missile base. That makes the fullest use of conditional brackets. Note that the AND inside the brackets stops the base from moving off either side of the screen.

In line 120 everything to be displayed is printed, for three reasons - memory is saved as all the printing is done in the one line, everything is displayed speedily and that leads to little flicker after the CLS in line 119.

Line 130 tests to find whether an
alien has been hit. Line 140 resets the missile when necessary. Line 150 moves the missile upwards. Line 160 moves the alien horizontally to either side at random.

Lines 200 to 250 are used at the end of the game. Note that the CLS in line 240 empties the display, thus leaving sufficient memory for the initilisation routine in lines 20 through to 90, i.e., memory is saved here by adding an extra line to the program.

To play Galaxians first RUN the program. Alien after alien will dive towards you. Use keys " 5 " and " 8 " to manoeuvre your base. Key " 0 " to fire. You cannot move and fire at the same time due to the basic INKEY\$. As your score increases the type of invader will change. The random invader scores a bonus of 200 points.

At the end of the game if the score does not appear but instead an INPUT prompt appears that means you have set a new highest score and the computer is waiting for you to INPUT your initials of up to five characters. Once the score has appeared, press NEWLINE for another game; any other INPUT will end the game. In that eventuality GOTO 20 will start the game once more with the highest score retained.

# YOUR SINCLAIR AND WRadio \& WORLD 

## THE PERFECT COMBINATION

Don't miss the February issue of R\&EW if you want the low down on some really high quality projects for your Sinclair computer.

Our low cost modem will allow any computer with an RS232 capability to go nationwide, courtesy of Buzby. The design is of a 300 baud originate only specification, yet will only cost about $£ 30$ to build.

The second great project is an RS232 card for the ZX81. This design enables a ZX81 to both transmit and receive ASCII coded RS232 data. The singlesided PCB plugs into the ZX81's expansion port, and if used in conjunction with our modem, will allow a low cost PRESTEL terminal to be implemented.

It's not only February's R\&EW that has a strong computing flavour watch out for our March Issue that is to feature a 16-page computing pull-out.

## SUBSCRIPTIONS

UK ( 12 issues) $£ 13.00$
Overseas ( 12 issues) $£ 13.50$

If you want to be sure of getting YOUR copy of Britain's most informative Electronics magazine with a strong Computing flavour, PLAY SAFE AND SUBSCRIBE. Fill in the form below.

## R\&EW - THE ELECTRONICS MAGAZINE WITH A STRONG COMPUTING FLAVOUR

# Sinclair ZX Spectn 

## 16K or 48K RAM... full-size movingkey keyboard... colour and sound... high-resolution graphics...

 From only モ125!

First, there was the world-beating Sinclair ZX80. The first personal computer for under $£ 100$.

Then, the ZX81. With up to 16 K RAM available, and the ZX Printer. Giving more power and more flexibility. Together, they've sold over 500,000 so far, to make Sinclair world leaders in personal computing. And the ZX81 remains the ideal low-cost introduction to computing

Now there's the ZX Spectrum! With up to 48 K of RAM. A full-size moving-key keyboard. Vivid colour and sound. Highresolution graphics. And a low price that's unrivalled.

## Professional powerpersonal computer price!

The ZX Spectrum incorporates all the proven features of the ZX81. But its new 16K BASIC ROM dramatically increases your computing power.

You have access to a range of 8 colours for foreground, background and border, together with a sound generator and high-resolution graphics.

You have the facility to support separate data files.

You have a choice of storage capacities (governed by the amount of RAM) 16 K of RAM (which you can uprate later to 48 K of RAM) or a massive 48 K of RAM.

Yet the price of the Spectrum 16K is an amazing $£ 125$ ! Even the popular 48 K version costs only $£ 175$ !

You may decide to begin with the 16 K version. If so, you can still return it later for an upgrade. The cost? Around £60.

## Ready to use today, easy to expand tomorrow

Your ZX Spectrum comes with a mains adaptor and all the necessary leads to connect to most cassette recorders and TVs (colour or black and white).

Employing Sinclair BASIC (now used in over 500,000 computers worldwide) the ZX Spectrum comes complete with two manuals which together represent a detailed course in BASIC programming. Whether you're a beginner or a competent programmer, you'll find them both of immense help. Depending on your computer experience, you'll quickly be moving into the colourful world of ZX Spectrum professional-level computing.

There's no need to stop there. The ZX Printer-available now - is fully compatible with the ZX Spectrum. And later this year there will be Microdrives for massive amounts of extra on-line storage, plus an RS232/network interface board.

## Key features of the Sinclair ZX Spectrum

- Full colour-8 colours each for foreground, background and border, plus flashing and brightness-intensity control.
- Sound-BEEP command with variable pitch and duration.
- Massive RAM-16K or 48 K .
- Full-size moving-key keyboard - all keys at normal typewriter pitch, with repeat facility on each key.
- High-resolution-256 dots horizontally $\times 192$ vertically, each individually addressable for true high resolution graphics.
- ASCII character set-with upper- and lower-case characters.
- Teletext-compatible-user software can generate 40 characters per line or other settings.
- High speed LOAD \& SAVE-16K in 100 seconds via cassette, with VERIFY \& MERGE for programs and separate data files.
- Sinclair 16K extended BASICincorporating unique 'one-touch keyword entry, syntax check, and report codes.

## How to order your ZX Spectrum

## ZX Spectrum software on cassettes-available now

The Spectrum software library is growing every day. Subjects include games, education, and business/ household management. Flight Simulation...Chess...Planetoids... History...Inventions...VU-CALC...VU-3D
...Club Record Controller...there is something for everyone. And they all make full use of the Spectrum's colour, sound, and graphics capabilities. You'll receive a detailed catalogue with your Spectrum.

## ZX Expansion Module

This module incorporates the three functions of Microdrive controller, local area network, and RS232 interface. Connect it to your Spectrum and you can control up to eight Microdrives, communicate with other computers, and drive a wide range of printers.

The potential is enormous, and the module will be available in the early part of 1983 for around $£ 30$.

USE AND LEARN
Your perfect Spectrum starter Kit. 25 original BASIC programs you can use immediately, PLUS 118 page manual to help you get the most from your 16or 48K Spectrum. 25 programs include: Music Composer, World Atlas, Computer Term Glossary,Screen Designer, Star Maps - PLUS games and powerful routines to use in your own programs: graph-drawing, text-editing, sorting, searching and much more. 118 page manual includes detailed description of programming techniques, full listings of all programs, and articles to develop your own program-writing skills.
"Excellent" A.R. West, Surrey. "First-time loading, user-friendly, superb documentation" J.E. Mann, Leeds.

## THE SPREADSHEET

Based closely on Visicalc, the world's best-selling program,
THE SPREADSHEET turns your 48 K Spectrum into a "super-Calculator' that helps you solve all kinds of number-based problems quickly and easily. Hundreds of applications in business, NEW engineering and science - and just as versatile for home finance management. Invaluable in education too, helping develop maths ability and confidence. In power, flexibility and ease of use, THE SPREADSHEET outperforms all other Spectrum spreadsheets - including Sinclair's VU-CALC. See for yourself, with the security of MiCROL'S 14 day money-back Guarantee.

## THE DATABASE

Whether you want to update mailing lists, manage customer accounts, or simply produce an index of your record collection, THE DATABASE makes it easy and enjoyable. A breakthrough in power and practicality, THE DATABASE allows you to store information on any subject in the way you want, and gives you a full range of commands to display, update, sort, search and print

- even perform calculations. Massive storage capacity: 1,000 lines in memory at a time,
 single C90 cassette. See for yourself why THE DATABASE is the most advanced 48K Spectrum database available - far more powerful and practical than Sinclair's VU-FILE and all other "competitors".

## THE WORD PROGESSOR

The only full feature, professionallywritten word processor for 48 K Spectrums. Use it to produce memos, letters, reports

- THE WORD PROCESSOR has the features you need, including flexible editing, justification, centering, and automatic "word wrap". Simplicity itself to use, THE WORD PROCESSOR uses the same "what you see is what you get" principle as word processors costing hundreds of pounds more. 20,000 character storage capability for real-work applications, and it's easily adapted to work with full size printers. Once again, MiCROL sets the standard in serious Spectrum software.

To order: Simply complete the coupon, and FREEPOST with your cheque, made payable to MICROL (UK Mail Order). All products normally available from stock and despatched by return. Credit Card Orders: By phone 9-5.30 Mon to Sat. stating name and address, Card No. and item(s) required.

LAST MONTH I explained how to draw a flowchart of a program by splitting it into parts. Each part corresponds to an operation performed either by the user or the computer program. This month we take that a step further and examine a way of breaking a program code into easilyunderstood areas.

There are three main operations performed in a program - input. processing by the computer, and output. Each of those operations has a distinct box in a flowchart and each has a distinct part in a program. If a beginner is to use the program the input section will be the longest, because of error-trapping techniques and instructions. The processing part of the program will be the longest if a technical person, such as a scientist who knows about computers, uses it.

Now to deal with methods of prompting a user to enter information into the computer and the best ways in which the computer can handle that information. With programs such as the database, which is to be constructed in this series, the screen display is very important. The computer uses the screen to display information to a user.

Many people who use programs such as databases or word processors will know nothing about how a computer works or what it expects as input. The more information given to the user by a program the better. That does not mean clogging the screen with vast quantities of text. Instructions on the screen should be easy to read and well-spaced. The clear screen

John Gilbert continues his course Breaking into the
program process
command should be used as often as possible to break-down information into easily-read pieces but at the same time the jump between one screen of instructions and another should be almost transparent to the user.

The text must flow naturally and there should be no illogical jumps in the instructions. That is a matter of experience but the database has been designed with clarity of instructions and prompts for inputs in mind.

The most important instructions should stand out from the rest. That can be done by liberal use of the commands BRIGHT, INVERSE and FLASH on the Spectrum and the GRAPHICS mode on the ZX-81.
Listing one is the menu subroutine for the database. It is written for the Spectrum but is easy to re-write for the ZX-81. To do that take out the INVERSE in 1020 and 1021. BRIGHT
in 1021 and FLASH in 1040. INVERSE can be substituted with the GRAPHICS inverse lettering of the ZX-81 and the title MENU should have spaces between each letter to make it more prominent.

The menu should not be surrounded by a border of a different colour. as that can confuse a user and make the screen look crowded. It is also important not to use excess graphics commands. A display with FLASH or INVERSE all over the screen is just as confusing as if they were not there.

One other thing which people tend to forget is that they have the use of all the screen. Do not cram things into the corners or sides of a screen. Titles should be central and if there is only an INPUT prompt on the screen, a good place to put it is the top left-hand corner.

Listing one is the first module of the program. If there is a menu in a
continued on page 58
Listing 1
continued from page 57
program it should be situated at the top of the code after any single or array variables have been declared, as in line 100 of listing one.

The menu module will display the options available from the program, ask which you require, put the number of the option selected in a string variable A\$, and transfer to the control program, also in listing one, at the top of the code. The control program, consisting of a series of IF . . . THEN instructions, will then transfer to the subroutine selected from the menu.
The two other modules which are listed in this article are for LOADing Listing 2
file name is asked for in lines 4010 and 5010. On the Spectrum a file or program name can be only 11 characters long. To stop the program crashing if the name typed-in by the user is too long, lines 4020 and 5020 will take only the first six characters of a file name. The other letters are cut off or truncated. Truncation is also used to cut the YES/NO inputs to Y or N .

The displays in both the SAVE and LOAD routines are important. Error messages should be displayed in the same position on the screen every time they appear. Every program should have a standard error message area to which the user will become accustomed. In the case of

```
4000>REM LOAD ROUTINE
4010 CLS INPUT "NAME FILE TO B
E ENTERED "; c事
```

```
2OTC 5)
M, THEN GOPRINNT,...
4040,FRSH 1, SET UP TAPE AND PRES
S NEW LINE** PAUSE O
40SO PRINT ..NTNUERSE 1;"FILE ...
;C事;" LOADING"
```

```
GADED **: pquse 1@Q
4080 RETURN
```

data files - listing two - and SAVEing files - listing three. They are for the Spectrum but ZX-81 users can add toolkit routines available from such companies as JRS Software. They will handle data files for the ZX-81. If you do not want to go to that expense you will have to SAVE the program and variables together.

ZX-81 owners will have to break out of the program by erasing the left-hand quote mark of an input and typing STOP. Then type SAVE "program name". When LOADing it back in, do the usual load but do not press RUN. Instead use GOTO 200.

The SAVEd program can be verified on the ZX-81 by re-winding the tape, typing LOAD " ", and reentering the program you have just SAVEd. If the program has SAVEd correctly an 0/0 error code will appear; if not you will get another number error code. If that happens you will have to re-SAVE.

In the SAVE and LOAD routines a
the database, that is in the middle of the screen. Also the error message in line 800 is BORDERed in red to warn the user that a specific input is required.

Be careful about using the word "input" in a prompt, as it is computer jargon. The word "enter" is preferred as is shown in line 1040 of the database.
Listing 3

The prompts and information in the SAVE and LOAD routines may seem simple and not worthwhile but the writer knows about the internal workings of the program and what to enter. A newcomer to a program, on the other hand, needs to be taken through it step by step.

When a module of a program has been written it is a good idea to test it on a friend or relative who knows nothing about computers. If they can follow the prompts, leave the display as it is; if they are confused, you know you have more writing to do.

I have now shown how the database is controlled using the menu and how to ease a user's task in getting through the program. Data storage and retrieval for the system has also been covered. Next month I will explain how data structures are created, how files are sorted, and how a piece of information which you want to retrieve is located for output in a matter of seconds using a special computer search routine.

## TEC Telford Electronics \& Computing The ZX8100 Deal

Send your ZX81, and for $£ 39.50$ (plus $£ 2.50$ p\&p) you will get back a computer 100 times better

All the above features for less than the amount some others charge for a keyboard you have to solder yourself. Optional extras are:
2 Atari-compatible joystick sockets plus sample game .£9
*Your 16K RAM pack fitted inside case . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . no charge, but see below

## IVOR KILLERBITE

 YOU MUST BUY THIS NEW BOOK"WRITE EFFICIENT ZX81 BASIC" by IVOR KILLERBITE
(As reviewed in January Sinclair User)
Improve your programming skills
Assumes knowledge only of Sinclair manual
Many techniques for speed, space saving and
"good practice"
lllustrated by over 25 program examples
Most of the principles applicable also to ZX Spectrum Basic
AND NOW - 2 SUPER CASSETTES BASED ON DEVELOPMENT OF THE BOOK'S IDEAS:
Cassette 1: "SWEET SIXTEEN"
16 IK Basic programs ( 8 general interest, 8 action games) which prove that enjoyable programs of adquate scope and speed are possible without extra RAM or machine code.
Cassette 2: "WORDKILL"
(needs 16 K RAM and ZX printer) A word-processor which can enter, amend, insert, delete, move, list, print and save up to 200 lines of 42 characters each. 10 or 12 characters per inch. Prints 30 characters per second. Lower case and special character. Automatic right justification, etc., etc. Turns the ZX81 into a true word-processing machine.
To: Ivor Killerbite, 10 Elson Road, Formby, Liverpool L37 2EG Please send me
'WRITE EFFICIENT ZX81 BASIC" at $£ 5$
Cassette 1 "SWEET 16" (IK): 16 great programs at $£ 5$
Cassette 2: "WORDKILL" ( $16 \mathrm{~K}+$ printer): word-processor at f 5 .
Prices inclusive of PGP \& VAT
I enclose cash/cheque/P.O. for f

Occupying over $131 / 2 \mathrm{~K}$ of memory, a superb 3D graphics adventure game for the $\mathrm{Z} \times 81$ with 16 K RAM, for only $£ 3.95$ ! Enter Dracula's tomb at 30 minutes to sunset wander through the tomb's pre-mapped 300 vaults in search of the fabled Vampire's Treasure .... pick up valuable silver stakes and use them to defend yourself against the lurking horrors ... ghouls, zombies, pits of primaeval slime .. See them all on the $\mathrm{Z} \times 81$ 's plan of the tomb . when it will let you! Take a chance on a Mystery Vault ...if you dare! And all the time the minutes are ticking by to sunset when Dracula rises from his coffin and comes after you Each of the infinite levels of the tomb has its own 300 vaults
. go as deep as you like, the Prince of Darkness will seek you out in his blood-lust! WARNING: people of an exceptionally nervous disposition should play this game only during the hours of daylight! Special facility enables a game in progress to be saved on tape so you can continue it whenever you choose

Price of only $£ 3.95$ includes ready-to-load cassette with library case and inlay, full instructions, postage and packing Order today' Money refunded if not delighted! Send cash. P.O. or cheque to

MOVIEDROME VIDEO (Dept. SU7). 19 Leighton Avenue, Pinner HA5 3BW.

# Tonight on your Spectrum 

## MEET AN INVADER UP CLOSE!

And play Adventure, Chess or any of 26 more programs, plus tips and hints, all in OVER THE SPECTRUM book. "In the Spectrum stakes OVER THE SPECTRUM runs out the clear winner." -

PERSONAL COMPUTER WORLD. Only $£ 6.95$.

Experience the fantasy of J. R. Tolkien's "HOBBIT" on your 48K Spectrum. Danger, adventure and excitement are all part of it in words and graphics, but it is you who must solve the problems. Special features never seen before. THE HOBBIT is the program everyone is talking about $£ 14.95$.

TALK TO YOUR SPECTRUM! Why is this man smiling? You will too when you read Dr. Logan's book UNDERSTANDING YOUR SPECTRUM. Including a special section on the ROM operating system. The definitive guide for only $£ 7.95$.

# With the Spectrum, program writers have been able to write more complex games. John Gilbert investigates this new move Sinclair brings the thrill of the arcade into your home 

ALMOST every major type of arcade game has been simulated on Sinclair computers. There are also new games which have an arcade format but have evolved on a microcomputer. The Spectrum is an ideal machine on which to play arcade games. The quality of them has improved substantially since the launch of the machine. Some of the first arcade games to be produced for the Spectrum were versions of Space Invaders, the game which started the arcade craze.
Spectral Invaders was the first to be announced by Bug Byte, which was already renowned for its arcade and adventure games on the ZX-81. So far it is the game which most closely resembles the original arcade version. Although it is slow it is difficult to score points, as you can fire only one laser blast at a time.
By the time the laser bolt has reached the place where you wanted it to go, the target invader has moved on. That means that a great deal of anticipation and skill is required. Graphically, the Bug Byte invaders is the best, with rows of differentcolour aliens crossing the screen and large motherships moving from one side of the screen to the other at random intervals. Spectral Invaders is well-presented and costs $£ 5.95$.
Another invaders game. Space Intruders, was launched at about the same time as Spectral Invaders. The game is much faster and is recommended for those who like to keep their fingers on the fire button and amass a big score. The only criticism is that the aliens and mothercraft are very small and the mothership is blue on a black background and so is very difficult to hit. Apart from that

Space Intruders from Quicksilva is good value at $£ 5.95$.

Namtir Raiders, for the ZX-81, is a space invaders game from Artic Computing with a difference. The player still has to face the hordes of aliens which come down the screen but the laser base can be moved up and down as well as left and right.
The greater movement permitted to the player is compensated by the hail of bombs dropped by the aliens and the size and power of alien ships. There are four waves of aliens and as the game progresses the ships get bigger until the giant mothership arrives.

The player has five laser bases during the game and they can take only five hits from alien bombs. There are three levels of difficulty -
easy to impossible. The game, costing £3.95, is addictive and the graphics are neither awkward in design nor jerky in movement.

The game which is gaining popularity with 48 K Spectrum owners is Timegate, from Quicksilva. The authors claim that it is the ultimate in 3D arcade space action. The game is loaded in two parts, the first being a lengthy instruction manual. After the manual has finished you can load the game. The object is to destroy a race of aliens called the Squarm who are trying to colonise Earth. To do that the player must fight the enemy in space and go through time by locating a series of Time Gates to find the Squarm's base.

The pleasant thing about the game

more difficult and can be run in slow, normal and fast modes. It costs £3.95.

Silversoft has produced a Scramble-type game called Ground Attack. It works on the same principles as the Mikro-Gen game but is much slower. There is a good deal of blank screen between game rounds and the average waiting time between rounds is 15 seconds. Ground Attack costs $£ 5.95$.

The range of arcade-type games on Sinclair machines is always increasing. Manufacturers seem to feel safe in producing standard arcade games such as Space Invaders and Scramble. Those games, especially for the Spectrum, are becoming more imaginative and the graphics and sound more impressive.

Manufacturers have to be careful about copying ideas from other games but with the imagination of some of the firms in the Sinclair market, children and many adults will be kept happy with arcade-type games on the ZX-81 and Spectrum for a long time.

Space Invaders games have now been overtaken by Pacman in popularity. A number of them have been produced for the ZX-81 and

Quicksilva has also introduced a Spectrum version called Meteor Storm. It has the added attraction of speech before play. It is difficult to hear the words but we are informed by the authors that it says "Meteor Alert . . . Meteor Alert . . .". Meteor Storm is a novel version of Asteroids and costs $£ 5.95$.

Sinclair Research has a good game of asteroids, called Planetoids, in its new Spectrum Software library. The asteroids are in 3D and much careful design work on both the asteroids and the player's ship seems to have gone into the game. Planetoids costs £5.95.

Artic Computing seems to be the only company to have produced a version of Galaxians for the ZX-81. ZX-Galaxians looks a little like Space Invaders but the invaders are ' V '-shaped and are supposed to be inter-galactic birds. The birds swoop from formation and bomb the
player's laser base. ZX-Galaxian is slow in action but can still be a very addictive game. It costs $£ 4.95$.

Defender is still a much-soughtafter game in the arcades and Artic Computing took advantage of that early in 1982 by producing a version for the ZX-81. The graphics are not particularly interesting and the spaceship which the player flies across the landscape is made up of a series of blocks which look only slightly like a ship.

Despite those criticisms, the original idea behind the game is still there and the Artic version can be
'With the imagination of some of the firms in the market, users will be kept happy with arcade games for a long time'
exciting, as you see the enemy ships rushing at you from the other side of the screen.

Now that the Spectrum has arrived, many manufacture have found an interest in the arcade game Scramble. The best and fastest version so far is from Mikro-Gen. In the game you have to go through caves which become smaller and smaller as it progresses. There are four sectors to the game, including Missiles, UFOs and Meteors. The player has to destroy the missiles which are fired from the ground at the player's ship, destroy UFOs with a laser blaster, and dodge the meteors.

The game becomes progressively
several companies are producing them for the Spectrum. It looks as if Pacman may provide the next boom in Sinclair software - but that is another story.
Bug Byte, 98-100 The Albany, Old Hall Street. Liverpool L3 9EP.

Quicksilva, 92 Northam Road, Southampton SO2 0PB.
Artic Computing, 396 James Reckitt Avenue, Hull, North Humberside.

Sinclair Research, Stanhope Road, Camberley. Surrey GU15 3PS.

Mikro-Gen, 24 Agar Crescent. Bracknell. Berkshire RG12 2BK.
Silversoft, 20, Orange Street, London WC2H 7ED.

## A COMPLETE LEARNING COURSE THAT EXPECTS NO PRIOR KNOWLEDGE FROM YOU AND GIVES FRIENDLY BUT WELL STRUCTURED TUTORIAL

## BOOK \& TAPE £ 14.95 <br> USA/CANADA/FAR EAST <br> ADD $£ 4.00$

The whole Dr. Watson series is written by people who teach computing but specifically structured to be used by you at home.
It remembers that home computing is for fun, it is easy to read and to follow but it also realises that you have no-one to answer your queries. All the teaching is integratedinto the programs that you write and the whole book and tape leads you to your own adventure game which you will continue to expand as your knowledge increases. Using a tape of prepared programs as you read makes it more simple and much quicker.

The chapters are organised to let you start and stop at will. Those with some idea will quickly cover the first few chapters but will soon reach more difficult sections as the course progresses to your structured adventure game. The book covers:

CHAPTER ONE PART ONE
The Spectrum Keyboard
Keys on the Top Row The Main Keyboard
PART TWO
Getting Started in BASIC
PART THREE
A Brief Summary of Sinclair \& Spectrum BASIC
Variables
Sting Variables
Other Functions
Screen Format
Cursors \& Report Codes High Resolution Graphics User Defined Graphics Sound
Conclusion
CHAPTER TWO
PART ONE
Guess the Number

Storing a Program
Load \& Save
Comparing Numbers
PART TWO
BODMAS Tester
CHAPTER THREE
An Etcha-Sketcha
Numbers \& Strings

## CHAPTER FOUR

Putting Structure into your Writing a Hangman Game
Initialisation
The Programs Structure
CHÄPTER FIVE
Developing a Video Graphics Game A Moving Ball
A Randomly-Moving Ball
A Bouncing Ball
CHAPTER SIX
Reaction Tester

CHAPTER SEVEN
Barcharts
CHAPTER EIGHT
PART ONE
Building on the Video Game
User-Defined Graphics
A Moveable Bat
Colour
Demolishing the Wall
A Final Program
PART TWO
Balltrap
PART THREE
Blockade
CHAPTER NINE
Composatune
CHAPTER TEN
Piecharts
Sample Problem
The Complete Pie Chart Program

## CHAPTER ELEVEN PART ONE

Adventure Game Project
The Adventure Database
Game Sequence Overview
PART TWO
Creating an Adventure
Loading the Database
Messages
PART THREE
Playing an Adventure
Debugging the Adventure
Extending \& Improving the Adventure Interpreter

## CHAPTER TWELVE

Sinclair BASIC's Advanced Features Save
Verify
Load
CHAPTER THIRTEEN

BEETHOVEN

BEETHOVEN is a remarkable program which allows you to produce music from your ZX－81．Stephane Crainic of Paris has linked hex values to the tones available from the speaker of your television set and has produced a table allowing you to convert the notes of the musical scale into those values．

When you have typed－in the pro－ gram，enter GOTO 110 so that you can read the instructions and the table of scales and hex codes．Then
transpose your tune into hex．After reading the instructions and pres－ sing keys to continue，the screen will show 0／9998．

Enter LIST 10，EDIT，and alter the A\＄to the list of hex values into which you have converted your tune．Increase the volume of your TV，enter GOTO 1 and your tune will be produced．The notes produced are all off－key but the quality is cer－ tainly no worse than that available from the Spectrum．Lower－case letters in our listing signify inverse video（ $16 \mathrm{~K} \mathrm{ZX}-81$ ）．

## Dobere Dise

THE OBJECT of Poker Dice is to throw five dice to get the best hand．Each player in turn throws all five dice by entering his name and pressing NEWLINE．He may then seek to improve his hand by entering the numbers of any dice with which he is dissatisfied．He can do so only once．
If the player does not wish to throw again，＂ 0 ＂will pass the play to his opponent．Poker Dice was sub－ mitted by John South of Bexhill－on－ Sea，East Sussex（ 1 K ZX－81）．

## VARIABLE LISTER

VARIABLE LISTER for the Spectrum is placed at the end of a program and after the program is run it will list all the variables，i．e．，string，string array， numeric，FOR．．．TO．
Your program must be RUN first and you should make sure that the variable routine is not RUN during execution of your main program． When you want to see what variables are contained in your pro－ gram，type GOTO 9990 and they will be listed．
This handy program was sent by Philip Taglione of Bradford，West Yorkshire．

OSEPH DONNELLY of Dublin has sent a fascinating game which involves moving a spent fuel rod from a nuclear reactor．The display shows the reactor from above，with different types of fuel rod arranged in a chessboard pattern．

The active rods must be manoeuvred so as to allow the passage of the spent rod，but active rods of the same type may not be placed too close without the imminent risk of contamination．A guage at the side of the screen shows
the danger level you have reached．
The game as listed is extremely difficult but could be made easier by omitting lines 115 and 117 ，which would allow diagonal moves，or by dropping line 210，which would mean that there was no restriction on the proximity of active rods．

In our listing，lower－case letters signify inverse video except when inside brackets，in which case they are graphic instructions．In line 1000，all As are graphic As（ 16 K Spectrum）．

## IPS＂Fast Load＂Monitor Program

## －Allows you to LOAD and SAVE ZX81 programs up to 6 times faster

－Easy－to－use in your own programs
－User－transparent when incorporated into programs
－Verifies proper loading
－Catalogues feature lists program names and memory usage
－LOADER occupies less than 500 bytes $(1 / 2 \mathrm{~K})$ of RAM
－Consists of 2 separate programs－KEYBOARD MONITOR and FAST LOADER
－Supplied on cassette with extensive documentation

The I．P．S．＂Fast Load＂Monitor is the dramatic break－ through in software needed to make serious use of the recent improvement in ZX81 hardware add－ons，such as 64 K memory units．
Whether you use the ZX81 for business，education or recreation，the I．P．S．＂Fast Load System＂increases available computing time by reducing idle＂waiting for the program to load＂time！
The I．P．S．＂Fast Load＂Monitor LOADS and SAVES ZX81 programs up to 6 times faster．
Fast loading and saving means you use less tape．One significant benefit is that almost ONE MEGABYTE of information can be saved on a standard C90 cassette！ And with＂Fast Load＂this increased database can be accessed quickly

```

1010 LET Gक="<graphic 8;3*SPRCE;
3*inverse SPRCE; 3*SPRCE; 3*invers
```

The＂Fast Load＂package consists of two separate programs：KEYBOARD MONITOR（including Machine Code Monitor），and FAST LOADER．
KEYBOARD MONITOR is a user－friendly BASIC program which gives such information as the speed at which the tape was recorded，file name，file type， number of bytes in file，and whether a read error occurred．If desired，the user－friendly portion of the program can be removed for direct access to Machine Code Monitor．Both parts reside at RAMTOP and are user－transparent．Full details are given in the manual for fast saving of your program．
FAST LOADER also resides above RAMTOP and can be used in front of any fast－saved program to enable it to be fast－loaded．This removes the need to load the monitor for each load．

## MOREIDEASTHA MORE PROGRAMSTHA LESS MONEYTHA

PROGRAMS FOR EDUCATION, HOME, BUSINESS, AND GAMES - FOR SINCLAIR, BBC, RESEARCH MACHINES, APPLE, COMMODORE, ACT SIRIUS, TRS-80, IBM, ICL, and more each month. . .

# NATHINK-TANK. NA SOFTWAREHOUSE. NYOU'DEXPECT. 

Whether you bought your computer for games, business, or education, you can spend a lot of time wondering what to do with it. And then spend a lot of money on packaged games and applications software.

NOW you can bring your computer to life economically - by joining the amazing new MICRONET 800 service: a vast database with hundreds of FREE games, plus business and education software, computer news, special offers and 'big prize' opportunities for you to compete against the system - and win!

MICRONET 800 is packed with ideas and information. And there's no waiting - you get programs straight down the phone line! Updates on operating systems... school and college programs
...gobble man....invaders... business packages. They're constantly renewed. And hundreds of them are free: you simply turn on your micro, dial up MICRONET 800 and LOAD.

Sounds expensive? Here's the surprise!
All you pay for is a low-cost adaptor (in most cases just £49) to link your computer to your telephone, plus a MICRONET 800 subscription of about $£ 1$ per week. Then, via your computer and telephone line you will be able to access over 30,000 ideas-packed 'pages' of the MICRONET 800 service, and call down the software you want to your own computer! Look at just a FEW of the services already available on Micronet for you to call on:

- Free Telesoftware: Indexed by subject and by name of micro, a huge selection can be loaded down onto your computer.
- Educational Exchange Library:Schools and colleges are already preparing to display programs written by students and teachers, so many can benefit from them eosily and economically.
- Applications Guides: Quick-reference guide by subject and by micro name shows you available applications software. You can move from the guide to further details held on the system if you wish. - Demonstrations: Check through the features of the software packages that interest you - privately and without obligation. Order only if you're sure it's what you need.
- Purchase 'Downloadable' Software: Many 'telesoftware' programs can be bought from the system and loaded down direct to your micro. But
don't worry - there's plenty of warning if any MICRONET service you're planning to use carries a charge.
- Electronic Mail: A mailbox service on Prestel allows you to exchange messages with other Prestel or Micronet users. Messages are held securely and only you can collect them.
- Bulletin Board: For an additional subscription you can operate your own bulletin board - club news, for example, like tips, swop-shop for second-hand items and so on.
- Phone-In: If you're away from your computer but need to send a messoge to another Micronet user call the Micronet 800 service by phone and we'll send the message for you.
- Prestel:Over 200,000 pages of information on British Telecom's established service. Facts and advice on finance, business, entertainment, features
and even direct bookings for travel, holidays, etc - Product and Service Guide: A constantly updated reference source - covering product comparisons, software reviews, deolership and price details and all the 'best buy' information. - Action Advertisinge Includes features, iust like a magozine, including jobs and classified ads. If you've read an article that interests you, through MICRONET you can find out about the manufacturer, the dealers, the prices, and even order the product via your microl - User Group News: The Amateur Computer Club and many others like ALCC, BASUG, ICPUG, TUG, TRS 80 UG, will maintain their news and reference service on Micronet.
- Big Prize Games: Micronet offers a range of games and quizzes to keep you entertained and involved - and there'll be big prizes too!

## SOUNDS FANTASTIC? THAT'S JUST THE START!

MICRONET 800 is a completely new service and we'll be adding to it all the time. Find out more about what Micronet 800 has in store for
you: return this coupon TODAY and we'll send you a FREE FACTS FOLDER on Micronet 800 services and details of how you can join!
 Send to: MICRONET 800, Petersham House, 57a Hatton Garden, London EC1B 1DT.
$\square$ Yes, I am interested in the MICRONET 800 service. Please keep me in touch with developments and send me details of the low-cost Micronet 800 adaptor.
$\square \mathrm{I}$ am interested in earning money on soffware I develop for the system I am interestedin: Homeuses $\square$ Business uses $\square$ Educational uses $\square$ Name

## NOW AVAILABLE FROM

 HILTON COMPUTER SERVICES LTDThe P.B.S. Bank reconciliation is believed to be the first such program to be available for the Sinclair $\mathrm{ZX81}$, the ZX Spectrum and Dragon.

Just look at some of its features:
Automatically matches bank statement items with transactions recorded in your "Personal Banking System.
List all outstanding items such as uncleared cheques, funds received but not advised to you, bank charges - highlights all discrepancies. No more scratching around to try and find out why your statement balance is different to what you expected.
Full search facilities allowing on-screen correction of any item.
Saves and loads data to and from tape (ZX81 version, at double speed). Exchanges data with the main P.B.S. program. No need to save programs. Single key operation - uses $\mathrm{m} / \mathrm{c}$ keyboard scan for single letter commands (ZX81 version).
Extremely easy to use. No jargon to wade through before you get started Demonstration program included.
All item lists, searches (with totals), etc. can be output to your ZX printer Full instructions included.
Unique after sales maintenance provided
Operates in conjunction with "Personal Banking System" (Full input and
correction facilities plus automatic posting of standing orders on due dates).
So banish the headaches, make life easier for yourself, send $£ 15$ for the Personal Banking System plus P.B.S. bank reconciliation and users manual.
Existing clients need only send f5 for the P.B.S. bank reconciliation which will operate with their present P.B.S.
The Personal Banking System (as reviewed in Popular Computing Weekly - 1 st July) is available separately for $£ 9.95$ for cassette and user manual. ZX81 P.B.S. owners can order the Spectrum version for just $£ 5$.

Please specify whether ZX81 (16K) or ZX Spectrum (48K) or Dragon Guaranteed software available from: Hilton Computer Services Ltd 14 Avalon Road, Orpington, Kent, BR6 9AX Your P.B.S. is never out of date)

We have full stock of all programs and supply by return of post (which is included in the price)

## TASWORD <br> THE WORD PROCESSOR

## "Very good value and great fun to use." <br> "Unreservedly recommended."

Popular Computing Weekly 19/8/82 - ZX81 Tasword

Now your Spectrum becomes a word processor with TASWORD. All the features of the ZX81 Tasword plus many extras. Designed to fully utilise the capacity and capabilities of your 48K Spectrum. More than 6K of machine code, a Basic program, and a manual, to give you a usable and powerful package.

Use TASWORD to produce your letters, essays, papers, records, lists, and for almost any task that requires the written word.

Whether you have serious applications or simply want to learn about word processing, TASWORD makes it easy and enjoyable.

## TASWORD TUTOR

"an eloquent demonstration of Tasword's uses"
We send you a manual and a cassette. The cassette contains TASWORD and TASWORD TUTOR. This teaches you word processing using TASWORD.
$£ 7.95$ fully inclusive mail order price.

## £1 DEMONSTRATION CASSETTE

See for yourself what TASWORD can do. Send just $£ 1$ for a demonstration cassette. This cassette contains the TASWORD program (with some facilities inhibited) and a text file which describes and demonstrates the performance and features of TASWORD. A voucher is included which gives you 50p off the price of Tasword.

## TASMAN SOFTWARE

17 HARTLEY CRESCENT LEEDS LS6 2LL

## ZX81 TASWORD

Tasword for the ZX81 (16K) is still available at $£ 6.50$. No demonstration cassette available but send 50 p (refundable against your subsequent purchase of ZX81 Tasword) for a copy of the manual.

## "A" LEVEL AND UNIVERSITY STUDENTS RESEARCHERS, SCIENTISTS

## Unibersity Software

PRESENTS SINCLAIR ZX81 (16K)* LIBRARY OF ADVANCED MATH/STAT/ECON
Made easy to learn and use with full instructions. TAPE 1 : MATRIX OPERATIONS
$£ 5.95$
Side A: Inversion, multiplication, addition, subtraction and scalar multiplicuser to complete all his operations without reloading in 6 min. 40 secs.
TAPE Determinants of square matrices
TAPE 2: POLYNOMIALS
£5.95
Raphson cludes quadratic equations (as degree 2 polynomals) and NewtonRaphson and half-interval search methods for
Computes the roots with 8 digits of precision
Side B: You can plot polynomials in any interval and examine their roots. TAPE 3 : INTEGRATION
Side A: Integration of functions by Simpson's and trapezoidal rules. Also computes the area enclosed by two functions.
TAPE 4: REGRESSION
£6.95
Side A: A highly developed multivariate regression program featuring up to 20 independent variables, log/In option on each variable (thus allowing exponential, geometric and nth order regressions), standard errors, statistics, F-statistic, Durbin-Watson statistic, interpolation.
Side B: Plot of bivariate regressions, You can see how your computer draws TAPE 5: LINEAR PROGRAMMING Side A: A general and efficient optimization program capable of handling any sort of linear programming problem with up to 20 variables and 20 constraints Features the cannonical equivalent of the original problem and its dual
Side B: Solutions of simultaneous equations with up to 30 unknowns.

- Cheques, P.O's payable to
- Five tapes for £30

This month John Gilbert looks away from the specific Sinclair publications More information
in general books

MANY GENERAL computer books, not written specifically for Sinclair machines, are so often useful to Sinclair users or other prospective computer owners. The Personal Computer Guide, by Tim Hartnell, provides information on most of the computers available. The guide is split into several sections, with a buyers' guide as an appendix to the computer reviews section.

The computer reviews contain short sections on the general appearance of each computer, approximate price, best and worst features. Hartnell draws some definite conclusions on the performance of each machine.

The guide includes a chapter on the history of computing from the days of Babbage to the present microcomputer boom. There is also a section on computer programming and how to use Basic.

One novel feature is that it has advertisements for a variety of machines, software and add-ons. The book also includes a list of clubs
and local organisations which the computer owner can join.

The Personal Computer Guide contains everything a first-time buyer or beginner to computing might need. It is excellent value at $£ 5.95$ and can be obtained from Virgin Books.

Computing is Easy, by David Parker and Martin Hann, is an easy introduction to computing. There are many simple programs ready to be typed-in and it is ideal for the

At the end of the book various topics are suggested to the programmer, such as currency conversion and composing tunes. The authors leave the programming of those tasks to the user. It is published by Newnes Technical Books and costs £4.95.

The Working Spectrum, by David Lawrence, is the handiest book about the Sinclair computer to appear so far. It charts the design of a series of routines, such as a filing system, an accounting program, a banking program and a graphic designer.

Each of the programs includes a discussion on how it works and the various techniques used, such as sorting and searching in the filing program. Each of the routines has been designed so that they can be used separately or in your own programs.

The book covers business uses, education and, of course, games. On the cover it indicates that it is volume one and I look forward to seeing the rest of the series. The Working Spectrum costs $£ 5.95$ and is published by Sunshine Books.

The Spectrum Pocket Book is another new book which can be recommended. It is more general than the previous book in the series, which was for the ZX-81, and includes a large section on machine code, which shows, among other things, how to print on to the screen using a machine code program and the Spectrum ROM.

There is also a full assembler program, disassembler and machine
> 'The Spectrum Pocket Book can be recommended. It is ideal for the first-time users and one with experience'
young user. A series of cartoons illustrates the book. They explain the concepts and, on occasions, are very amusing.

It has a chapter of debugging exercises, so that the beginner can become accustomed to the types of problem which occur during programming.
code monitor. It provides much useful information on the internal workings of the machine.

It is ideal both for first-time users and a user who has had some previous experience. It costs $£ 4.95$ and can be obtained from Phipps Associates.
continued on page 84
continued from page 83
Andrew Hewson has launched into the Spectrum market with 20 Best Programs for the ZX Spectrum. The book includes mathematical, graphics and games programs, with information on how they work and how they were written.

It is excellent value at $£ 5.95$ and illustrates many programming techniques, including data filing, sorting and binary search.

Easy Programming for the ZX Spectrum, by Ian Stewart and Robin Jones, is another introductory text which can be recommended for the beginner. In particular, there are several good chapters on graphics which show how to paint outlined shapes with colour.

The authors explain how to debug programs and make them more efficient, an important but littlestressed area in most books about Sinclair machines. It is from Shiva Publishing and costs $£ 5.95$.

The Spectrum Book of Games, by Mike James, S M Gee and Kay Ewbank, is ideal for all those who just want to enjoy the machine by playing games. It contains game listings for Space Invaders, squash rackets and even nine-hole golf. The programs are all explained but this kind of book is nothing new. Most of the games are based around Space Invaders, Breakout and Find the Treasure.

It is a good start for a beginner who wants to write or just type-in
games programs. It is published by Granada Publishing, PO Box 9, St Albans, Hertfordshire AL2 2NF and costs £5.95.

Robin Bradbeer edited the Spectrum handbook and can be regarded as an expert on the machine. His new book, Learning to use the ZX Spectrum Computer, is an easy introduction to Spectrum Basic and some of the simple ways in which the computer can be used.

It provides a fine foundation for beginners but users who have some computing knowledge already will find little of interest in it. The book includes two appendices. The first lists additional reading material in the form of books and magazines and the second details the differences between Spectrum and ZX-81 Basic. It is available from Gower Publishing Co Ltd, Gower House, Croft Road, Aldershot, Hampshire GU11 3HR and costs £4.95.

## ZX81 SPECTRUM DRAGON 16K 16/48

## AWARI

$\star$ The ancient African game of logic. It takes 2 minutes to learn the rules but far longer to master the tactics.

* Select the 'Goat-herd' level of play and it's an addictive game for children ( $8+$ ) that exercises their minds - not their laser fingers.
* Select the 'Witch-doctor' level and it's a threat to your sanity. We haven't beaten it and we wrote it!

## ADVENTURE

$\star$ Over 200 places to explore in this machine code game using advanced data compression techniques.

* No random elements - you will need skill, cunning and a sense of humour as you explore caves, forest and castles.
$\star$ Evade ruthless pursuers and overcome a host of obstacles.
* Multiple word commands and single letter abbreviations.

## £1000 IN PRIZES

## FANTASTIC VOYAGE

## (ZX81 16K ONLY)

This real-time graphics simulation set inside the human body was written by a lecturer in anatomy. You are injected into the blood stream in your miniature submarine. Navigate the arteries, veins and heart to the brain, where a blood clot must be destroyed. Features a real vascular map. You will be attacked by lymphocytes which must be destroyed using arcade game type graphics. Everything you do uses up precious energy. Three display formats - a lateral and frontal body scan plus blood vessel name, a close-up scan and a laser-sight for fighting lymphocytes.
$\star \star$ Buy both Awari and Adventure and enter the 'Foilkade Challenge' competition. Details with cassette or send SAE.

## OXFORD SOFTWARE GROUP

offers you a powerful tool to understanding yourself and those around you: A PSYCHOLOGICAL PERSONALITY EVALUATION TEST

This is not a game - it is a serious scientific program utilising psychological studies which attempt to give an objective measure of personality and provide a comparison to that of the population as a whole. It provides you with a personality test, evaluates it, and allows you to see your own scores marked against those of the general population with extensive use of graphs and bar chart displays. You may run the test to find out how others see you, and compare these results with your own. You may also try the test on your friends, and find out how they view themselves.

The program comes complete with full documentation, including use of the test, the personality traits examined, how the questions are constructed to determine these traits, and a general discussion of questionnaires and their use in psychological studies.

This extensive program is now available on the Sinclair spectrum 16 K by being programmed in three sections each being auto-run, and is available for direct run on the ZX 81 . Versions are also available for the T199/4 with the Research 380 Z and 4802 (RML Extended Basic) the BBC Model B and the Acorn Atom available in March

Please send a cheque or postal order for $£ 7.50$ to: Oxford Software Group, Lady Margaret Hall, Oxford OX2 6QA. We will endeavour to deal with your order by return of post whenever possible.

ZX LOADING AID for $\mathbf{Z X 8 0}, \mathrm{ZX81}$ or ZX Spectrum (please specify). Removes guesswork from adjusting volume plugs in between computer \& tape recorder: red + green LEDs on - optimum volume set; red LED (only) on - volume too low; yellow LED on - volume too high. $£ 11.95$ includes instructions. Push-button to reset ' $K$ ' cursor $£ 1$ extra.

ZX81 KEYBOARD BLEEPER provides feedback missing from touch sensitive keyboard cheaply - easy installation. All 210 characters bleep in slow \& fast modes. No soldering required - all connections plug-in. Fits inside case under keyboard or ZX81 PCB. No trailing wires - also suits most full size keyboards available for ZX81. £9.95 includes illustrated instructions. On/off switch $£ 1.50$ extra

T-SHIRTS $£ 3.50$ SWEATSHIRTS $£ 7.50$. Black with red "SINCLAIR ZX81" or white with black "ZX SPECTRUM" + rainbow

Terrific hand airbrushed, multi-coloured designs "I'M A MICRO ADDICT" or "MICROCOMPUTERS TAKE YOU INTO ANOTHER WORLD" against space scene T-shirts $£ 4.50$, sweatshirts $£ 9.00$.

## Tony Poulter reports on our last contest

 Screen expandedin only nine bytes
easier to type-in. The nine bytes start at 17325 , as he says the program will not work anywhere else in the memory. When run, the screen is filled, mostly by inverse Hs and the machine is in a very odd state with the keyboard dead.

What do the nine bytes do? At the start, register A contains the remainder after dividing 17325 by 256 , which is 173 . Put 173 in 16418 and you enable 24 lines. Put 173 in 16441 and you enable 34 columns.

GOSUB to ROM address 16 and you print 173, which is inverse $H$, jump back, to the second 50 in fact, until the machine gives up.

Janda says that he entered the competition as part of a challenge from a friend.

Reading a great deal of interesting material, I felt that many were speaking in a new language - the language of the readable REM. For perfection, that needs to have no spaces or question marks in it.

Figure two, a combination of two entries, is an example of how the method achieves a full normal screen of 768 characters. It has two question marks in its 13 bytes, which are then supplied by the two POKEs, and no spaces. That creates 768 of high resolution. Press NEW

NEWLINE will get you out of it quickly.
To print normally have Y2 instead of Y0 and you will find you are using ROM address 2923, a string print routine which expects a start address in the DE, the ZZ and a length in BC, accidentally containing some larger number. This produces a printout of the ROM, or RAM, as readable REM.

Another way the method was used is shown in figure three which has no question marks in its 39 bytes and one space at the fifth byte. Bytes 4 to 8 are how the extra length is achieved. Error 4 is given when the stack pointer is within 36 bytes of STKEND. By increasing the stack pointer by $1 \mathrm{~K}, 31$ bytes are gained and nothing else is affected.

You must switch the machine off and on between examples.
The program allows you to type-in the 768 display, accepting letters, figures and punctuation, which it displays inverse. It is also possible to type STOP to return to Basic.

Useful numbers are 699, the ROM keyboard read, which sets H and L , and 1981, the ROM keyboard decode, which expects information in BC and puts in HL, the address at which the character is stored.

## JOIN THE USERS' CLUB

Make the most of your Spectrum or ZX81 by joining the country's strongest and most enthusiastic users' club-the National ZX Users' Club.

When you join us, we'll send you our 'new members welcome pack' with 30 programs ( 15 for the ZX81, 15 for the Spectrum), plus the first issue of our value-packed club magazine INTERFACE

Inside INTERFACE as well as at least six programs for your ZX81 or Spectrum, you'll find letters from members as they share tips and ideas, and sound off on a variety of subjects (such as you-know-who's appalling delivery times record), a list of local ZX clubs, and special offers from software houses and book publishers-special offers just for members.
If you're having problems with your computer, we have experts on tap to try and help you. If you want to start a local users' club, we'll give you publicity, and let you buy books at a special discount for your club members.
If you're not a club member, you're missing out on making the most of your micro (and try saying that ten times quicklyl) Come on in and join us, the water's fine. It's $£ 9.50$ for a year's INTERFACE, and we'll send you a sample issue for $£ 1.00$

Run by Tim Hartnell, the National ZX Users' Club is a resource just waiting to be tapped. Come on and start tapping.

```
National ZX Users' Club,
Dept. SU
44-46 Earls Court Road,
London, W8 6EJ
```

OK, Tim, you've convinced me:
( ) Send me my 'new members' welcome pack' plus my first issue of INTERFACE and keep those INTERFACES coming for the next year. I enclose $£ 9.50$ (UK), £12.50 (Europe)
$($ ) Just send me a sample of INTERFACE. I enclose $£ 1.00$
I have ( ) a ZX81 ( ) a Spectrum
Name
Address concerning the PRINT command Finding the answer to screen filling

MOST OF the questions this month are concerned with PRINTing problems. The first is from Derek Barry of Witney, who asks: It can be very annoying when the screen fills on the ZX-81 and the program grinds to a halt with Report Code 5. Is there a way to scroll the display automatically?

The column and line numbers of the PRINT position are held in the system variables at 16441 and 16442 respectively. For some eccentric reason the line numbers are counted from the bottom of the screen upwards, starting at one, not from the top downwards starting at zero as with the PRINT AT command. The bottom two lines normally are reserved for INPUT and error messages, although a method for PRINTing on these lines is given later in this column; hence if 16442 contains 2 or less the program will fail at the next PRINT command.
To SCROLL the screen automatically include the following line before each relevant PRINT statement: IF PEEK 16442 < 3 THEN SCROLL

The SPECTRUM has a separate system variable at 23692 to keep track of the number of lines which may be PRINTed before the next scroll?
query should be issued. To prevent the query appearing, POKE a number larger than 1 - and less than 256 - into 23692 as often as necessary.

Daniel Guillemyn of Toulouse, France asks: Is it possible to set the colour of a pixel in the Sprectrum display independently of all the others?

No. There are $256 \times 192=49,152$ pixels in the Spectrum display and $49,152 / 8=6,144$ bytes are used
simply to determine which of the pixels are illuminated and which are not. If each pixel could take any one of, say, eight colours, a further 3 $\times 6,192=18,576$ bytes would be required, to say nothing of the extra hardware required.
All current colour computers make some compromise on the colour detail they support. In the Spectrum each eight by eight group of pixels which form a character position is assigned an INK, or foreground, colour and a PAPER, or background, colour. Colours can be assigned to each character position independently but changing the INK colour, for example, of one pixel in a character position also changes the INK colour of the other 63 pixels. There are $32 \times 24=768$ character positions in the display and their

long line is being INPUT or EDITed.
To PRINT in the lower part of the screen, POKE the value 0 into DF-SZ, as in this example:

## 10 POKE 16418,0

20 PRINT AT 23,8 ;"THE BOTTOM LINE"
30 PAUSE 32768
The PAUSE command is not necessary generally but I have included it in this example to prevent the STOP message being PRINTed and thereby obliterating the output from line 20.

The Spectrum stores the value of DF SZ at 23659 and the technique for PRINTing on the bottom of the screen is similar except that the machine will crash if PRINT AT is used on line 23 or if the value in 23659 is not POKEd back to 2 after

current colours are held in the attributes file which is held at locations 22528 to 23295.
Is there a way of printing on the bottom two lines of the display? asks Gordon Charlesworth of Macclesfield, Cheshire. On the ZX-81 the DF-SZ system variable at 16418 is used to store the current number of lines, including one blank line, in the lower part of the screen. DF-SZ is normally set to 2 and is increased only when a particularly
use. The following routine PRINTs a number on all 24 lines of the display:
10 POKE 23659,0
20 FOR i $=0$ to 23
30 PRINT i
40 NEXT i
50 POKE 23659,2
60 PAUSE 0
The machine will crash if the routine is run with line 50 omitted or if line 30 is replaced by:
30 PRINT AT i, i; i
continued on page 90

continued from page 89
Several people have asked about the machine code PRINT AT facility for the Spectrum described by Andrew Pennell in the October issue of Sinclair User. Andrew Beale of Tolworth, for example, writes: I cannot find a reference in Appendix A of the manual to the RST 10 command described. Please tell me the exact decimal codes to, say, PRINT AT 0,$0 ;$ " $A$ " in machine code.

It is conventional to count in hexadecimal when referring to machine code routines, thus the 10 in RST 10 is in hexadecimal, i.e., 16 in decimal. Appendix A of the Spectrum manual uses the decimal system so that the RST 10 instruction used by Pennell refers to the RST 16 instructions about onethird of the way down column four on page 186 of the manual. The decimal code is 215 . The following routine is the machine code equivalent of

PRINT AT 0,0;"A"
LD A, 16
RST 10
215
620
215
630

RST 10
LDA, 0

## 50 NEXT i

To call the routine, initialise the PRINT position and then use the USR function, for example:

## 100 PRINT <br> 110 RAND USR 32600

To alter the Y and X PRINT AT coordinates, change the fifth and eigth numbers in the DATA statement and to PRINT a different character change the eleventh number to the appropriate character code.

Finally, Philip Pfeil of Havant, Hampshire, asks a perennial question. He writes: At the risk of admission to the funny farm, can you please tell me how to SAVE and LOAD programs into my ZX-81?

It is a sad fact that many people have difficulty in SAVEing and LOADing. The problem is particularly acute for the newcomer to the ZX-81 who has not had the experience to diagnose a fault. None of the advice I can offer is original; most of it has been published several times but I repeat it because about five percent of the letters I receive are from people who cannot LOAD and/or SAVE.

When SAVEing a program, make sure that the cassette and the player are free of dust, because even a

RST 10
LD A. 41
RST 10
215

RET
The right-hand column lists the decimal codes. The routine can be loaded into the graphics area of the 16 K Spectrum as follows:
10 DATA $62,22,215,62,0,215,62$, 0, 215, 62, 65, 215, 201
20 FOR i = 32600 TO 32612
30 READ a
40 POKE i, a
6265 215 201
 momentary interruption in the recorded information will make reLOADing impossible. Connect one lead only - the SAVE lead in this case - between the computer and the cassette player, otherwise a low frequency hum may be recorded on the tape, smothering the signal from the ZX-81.

A television set generates a strong oscillating electric field and the result can be a high-pitched noise recorded on the cassette. The

cure is to keep the cassette player at least three feet from the TV set. Always SAVE at least two copies, thereby increasing the probability of obtaining an adequate copy.

Some people suggest that batteries should be used to power the cassette player so that there is no possibility of picking-up interference through the mains supply. I have always found that batteries are more trouble than they are worth; even the high-power versions drain very rapidly, causing the cassette player to run too slowly.

Similar precautions should be taken when LOADing a tape but you must also adjust the volume on the cassette recorder to the required level. If the sound is not loud enough to make you wince when the tape is played with the EAR lead disconnected from the recorder you are unlikely to be able to LOAD the program satisfactorily.

When LOADing, the TV display should show fluctuating broad black and white bands like a zebra crossing. If the volume is low the bands will not appear or the black parts will be interspersed with white. If the volume is too high the screen will appear almost entirely black. Adjust the volume by making a dummy run through the tape.

If you find SAVEing and/or LOADing is impossible, your next step should be to isolate the problem as it could be the tape, the cassette player or the ZX-81. The easiest way to do so is to contact a fellow ZX-81 owner and swap your items with his until you are certain which unit is at fault. Even if the other person is a complete stranger, you will no doubt have an enjoyable time swapping tips with him which may be some consolation if the worst comes to the worst and you have to return your computer for exchange or repair.

THERE was a fantastic response to my first puzzle. Many correct answers and only a few incorrect ones. I will include the best program with respect to size, technique, and speed. It was sent by W E Thomson, of Aldeburgh, Suffolk. While most took six to 10 minutes, this took only one minute five seconds.

There was a mistake on my part to the solution given last month; it should be $1,548,137$. To use the program it should be typed into a ZX-81 but it should work on a Spectrum. When it is run the highest number to test is required; in the

## Philip Joy sorts through his postbag and finds a chess cassette which speaks

## Good response to first puzzle

150 IF P\$(M) $=$ " X " THEN NEXT M
160 IF $\mathrm{M}=\mathrm{L}+1$ THEN GOTO 220
170 LET $\mathrm{N}=\mathrm{M}+\mathrm{M}+1$
180 LET T $=$ T +1
190 LET $\mathrm{S}=\mathrm{S}+\mathrm{N}$
200 IF N < Q THEN GOTO 110 210 NEXT M
220 PRINT "NUMBER OF PRIME
NUMBERS $=$ "; T, "SUM OF
PRIMES $==" ;$ S
230 SLOW
There was a program sent by B C Woodrow of Dorset. He says he has had his ZX-81 only since September and while not the best version, it was very good.
The Quicksilva 48 K Spectrum chess program has been sent. It seems to have some space age theme
> 'A very good way of testing programs is to find in how many moves mate can be achieved. It is easy to create a mate problem and gives the most accurate check'
about it, as the short story with it is like a science fiction story. The game has speech, something you may or may not be able to hear. It also has six levels of play, analysis of moves, and a save game option. The game, called the Chess player, is available from Quicksilva Ltd, 92 Northam Road, Southampton, SO2 0PB.

Now to a letter first mentioned a few months ago from Simon Gross of Ipswich. He says that to put a chess program through tests, to see how good it is, is best done by recording results, as opposed to studying the
program. Studying a program of 9 K machine code is not a very easy task. It is a very skilled job to look objectively at the skill sector of a chess game, let alone unravel the machine code as well.

Recording results about the look ahead and speed is much easier. I must agree that very few people could look at so much machine code and decide how a game will play.

Gross suggests mate in so many moves type of problem, so that the program has to look ahead; the better programs will find mate easier and earlier. That is a very good way of testing programs and anyone can create a mate problem. The time it takes to work out the problem, if it does, is noted. That will give the most accurate check on chess games the average person can do.

It may give you some insight into how to beat your version of chess in the end-game. If you make up the problems, your own game will be improved. Different versions will act differently, so you can try it on all your versions. If you discover anything interesting, send the details.

For this month's puzzle I have devised a cunning maths problem: $1 \cdot 2 \cdot 3 \cdot 4 \cdot 5 \cdot 6 \cdot 7=165 / 6$ or 16.833333

The dots are either,$+ \sigma^{*}$ or $/$, but which is which? The idea is to get your ZX-81 or Spectrum to find what each individual dot is. The program must work out the answer. Send the answers and program, again no prizes, but the best one will be published in a future issue. Remember that $1+2 * 4$ is 9 and not 12, i.e., multiplication first.

## ZX SPECTRUM \& ZX81 EDUCATIONAL SOFTWARE

## Spectrum Junior Education

Use your Spectrum to help your children with their school work. This cassette contains eight attractive, easy-to-use programs for the 7 to 11 age group

- Topics include English comprehension, spellings, homophones, junior science, maths and history.
Entering your own questions and answers allows you to adapt two of these programs for exercises in any subject area.
- Moving colour graphics and sound are extensively used to improve motivation.
- Use the "draw" programm to produce pictures, maps and diagrams

Suitable for the 16 K or 48 K Spectrum. Program notes are supplied.

O-Level Chemistry (C1)
c5. 50
This cassette contains four clearly presented revision/tutorial programs. The subject matter has been carefully structured to cover the most important aspects of:

- Elements, compounds and mixtures.
- Structure, bonding and properties.
* Redox, electrolysis and the activity series.
- Acids, bases and salts.

48 K Spectrum and 16 K ZX81 versions of the cassette are available. Please specify which you require.

The first of the best of the year! A complete guide which follows the course of all the Sinclair developments in the last 12 months-and you'll never believe how much has happened until you see it!
Since Sinclair User was launched in April, we've tried to keep you up-to-date. Now we've asked our top writers to take stock of the year's progress in the compendium you won't want to miss.
We've also chosen the best articles and programs from previous issues-so the new Sinclair User Annual makes a great gift for a new enthusiast, as well as forming a valuable reference work for you.
The Sinclair User Annual will be available from the beginning of December, price $£ 1.50$, from your usual newsagents.
Make sure you order your copy in good time-because everything about Sinclair is fast-moving! So don't miss it!
If you are unable to obtain Sinclair User Annual from your newsagent, order it by post from:

## MAIL ORDER ADVERTISING <br> British Code of Advertising Practice

Advertisements in this publication are required to conform to the British Code of Advertising Practice. In respect of mail order advertisements where money is paid in advance, the code requires advertisers to fulfil orders within 28 days, unless a longer delivery period is stated. Where goods are returned undamaged within seven days, the purchaser's money must be refunded. Please retain proof of postage/despatch, as this may be needed.

## Mail Order Protection Scheme

If you order goods from Mail Order advertisements in this magazine and pay by post in advance of delivery, Sinclair User will consider you for compensation if the Advertiser should become insolvent or bankrupt, provided:
(1) You have not received the goods or had your money returned; and
(2) You write to the Publisher of Sinclair User summarizing the situation not earlier than 28 days from the day you sent your order and not later than two months from that day.
Please do not wait until the last moment to inform us. When you do write, we will tell you how to make your claim and what evidence of payment is required.
We guarantee to meet claims from readers in accordance with the above procedure as soon as possible after the Advertiser has been declared bankrupt or insolvent (up to a limit of $£ 4,250$ per annum for any one Advertiser so affected and up to $£ 10,000$ per annum in respect of all insolvent Advertisers. Claims may be paid for higher amounts, or when the above procedure has not been complied with at the discretion of Sincloir User, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of readers' difficulties).
This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payment made in response to catalogues etc, received as a result of answering such advertisements). Classified advertisements are excluded.

# MICHAEL ORWIN'S ZX81 CASSETTES <br> THE BEST SOFTWARE (BY VARIOUS AUTHORS) AT LOW PRICES 

## QUOTES

"Michael Orwin's £5 Cassette Two is very good value. It contains 10 stolid well designed games which work, offer plenty of variety and choice, and are fun."

Your Computer, May '82
"Michael Orwin has built a reputation for value-for-money software and his Cassette 4 offers quantity as well as quality."

Sinclair User, October ' 82
"If each game was on a separate tape and selling for $£ 5$ each I would still recommend them. But all on one for $£ 5$. . . .I This sort of value for money just has not been seen before on any personal computer."
"Without sounding pushy I would like to conclude this review by saying - if you have a ZX81 and like games, then you should buy Michael Orwin's cassette 4."

2 extracts from ZX Computing, Oct/Nov '82

## CASSETTE 1

(eleven 1k programs)
machine code:
React, Invaders, Phantom aliens, Maze of death, Planet lander, Bouncing letters, Bug splat.
Basic:
I Ching, Mastermind, Robots, Basic Hangman. PLUS Large screen versions of Invaders and Maze of Death, Ready for when you get 16 k .
Cassette One costs $£ 3.80$

## CASSETTE 2

Ten games in Basic for 16k ZX81
Cassette Two contains Reversi, Awari, Laser Bases, Word Mastermind, Rectangles, Crash, Roulette, Pontoon, Penny Shoot and Gun Command.
Cassette Two costs $£ 5$.

## CASSETTE 3

## 8 programs for 16k ZX81

STARSHIP TROJAN

Repair your Starship before disaster strikes. Hazards include asphyxiation, radiation, escaped biological specimens and plunging into a Supernova.
STARTREK This version of the well known space adventure game features variable Klingon mobillity, and graphic photon torpedo tracking.
PRINCESS OF KRAAL An adventure game.
BATTLE Strategy game for 1 to 4 players.
KALABRIASZ World's silliest card game, full of pointless complicated reles.
CUBE Rubik Cube simulator, with lots of functions including 'Backstep'.
SECRET MESSAGES This message coding program is very txlp qexi jf.
MARTIAN CRICKET A simple but addictive game (totally unlike Earth cricket) in machine code. The speed is variable, and its top speed is very fast.
Cassette 3 costs $£ 5$.

## CASSETTE 4

ZX-SCRAMBLE (machine code) with 3 stages. Bomb and shoot your way through the fortified caves.

8 games for 16k ZX81

GUNFIGHT
(machine code)

## INVADERS

(machine code)

GALAXY INVADERS (machine code)
Fleets of swooping and diving alien craft to fight off. SNAKEBITE (machine code)

Eat the snake before it eats you. Variable speed. (very fast at top speed).
LIFE (machine code)
A ZX81 version of the well known game.

## 3D TIC-TAC-TOE (Basic)

Played on a $4 \times 4 \times 4$ board, this is a game for the brain. it is very hard to beat the computer at it.

7 of the 8 games are in machine code, because this is much faster than Basic. (Some of these games were previously available from J. Steadman). Cassette 4 costs $£ 5$.

# ZX81\& SPECTRUM KEYBOARDS COMPLETE WITH LUXURY CASE FOR ONLY $£ 37.95$ (ZX81) OR £45.00(SPECTRUM) INC. V.A.T. 

These highly professional keyboards incorporate executive buttons similar to those used on top-quality computers. A repeat key facilitates entering of characters much faster than is possible with a conventional keyboard, thus making it particularly ideal for cursor control and erasing. Attractive black plastic moulded case. Supplied with $12^{\prime \prime}$ flexible ribbon cable for connection into your computer. Not to be confused with toy keyboards currently on the market. Other attributes as reviewed by Tim Hartnell, ZX Computing/Interface.

## OTHER KAYDE HARDWARE/SOFTWARE

| ZX81 4K GRAPHICS BOARD <br> The KA YDE Graphics Board is probably our best accessory yet. It fits neatly inside your $\mathrm{ZX81}$. It comes complete with a pre-programmed 4 K Graphics ROM. This will give nearly 450 extra graphics and with the inverse makes a total of nearly nine hundred. <br> The KAYDE Graphics Board has facilities for either 2K of RAM (for user definable graphics) 4 K of ROM or our 4 K Tool Kit Chips that will be available shortly. All the graphics are completely software controlled therefore they can be written into your |  |
