The best deal for SPECTRUM owners?

Prove it

We wanted to tell you about the Logic 3 Spectrum Club.

We wanted to show you how our independent reviewers praise products that are good and slate those that are bad (even if a product has been hyped into the charts). We absolutely had to explain how we pick software from some of the biggest (and some of the smallest!) publishers in the business, and how our range of games, educational software, books and programming utilities is second to none.

Of course, we were going to tell you about the top discounts for club members, our New Member's bonus scheme, the "Win a Microdrive Competition", and how the club had grown to 8,000 members in just six months . . .

But then we figured out that you would want to check all this out for yourself. So this month we are making a special offer—send in the coupon—and we will send you, absolutely FREE, the latest 20-page edition of the club catalogue—packed with 150 reviews!

I have

Mountbatten House, Victoria Street, Windsor SL4 1HE, England.

HITTING someone over the head with a rolled-up newspaper may not be featured in the latest guides to modern business practice but it is a certain way of making sure you hit the headlines.

It is definitely a more entertaining way of settling your differences than bringing in the lawyers. Cheaper and more effective as well, if the festive season disagreement between Sir Clive and his arch-rival, Chris Curry of Acorn Computers, is anything to go by.

Following the tortuous road of legal processes to obtain redress can always ensure that the original course of the dispute will be remembered far better than the outcome. The Rule of Rolled Newspaper, on the other hand, ensures headlines and the immediate opportunity to put the record straight. It is more satisfying too.

It does help if you are the media's favourite new technologist and if the object of your spontaneous irritation is a former colleague and most serious competitor, but it opens up many new possibilities which could hit the pockets of the legal profession and provide the need for a new correspondent in the newspapers.

Perhaps the battle for circulation in the popular tabloids could be settled with rolled-up copies of the *Mirror* and the *Sun* held by Robert Maxwell and Rupert Murdoch instead of Bingo; elections could be decided by Margaret Thatcher and Neil Kinnock with copies of the *Daily Telegraph* and the *Guardian*.

Readers will have realised by now that the basis for all this speculation is the incident which occurred just before Christmas at a public house in Cambridge and which is related in more detail on the news pages.

The fact that it took place between two grown, apparently intelligent, men says a great deal about the competitive nature of the home computer market and the rivalry between the two industry chiefs.

When Sir Clive set up his first company, Sinclair Radionics, one of his employees was Chris Curry. He worked as a technician during the period when the calculators, black watch and small television were being developed, produced and sold.

Their association continued as Sir Clive reduced his interests in Radionics and was involved in a company called Science of Cambridge – the forerunner of Sinclair Research.

Then towards the end of 1979, as Sir Clive was doing the preparatory work on the revolutionary ZX-80, Chris left. He set up Acorn Computers with Hermann Hauser, launched the Atom in the same year as the ZX-80 and the two have been in keen competition ever since.

While being serious business rivals they have remained friends, apart from the odd incident. But Sir Clive has never been able to hide his disappointment at not getting the BBC contract which went to Acorn. That meant he suffered in the education market, and while he succeeded in the selling stakes he came second in product image: the BBC micro has always been the serious machine while the Spectrum was relegated to games playing.

That says much for the character of Sir Clive. It is not sufficient for him to be a commercial success – he has to be a success on his own terms. Despite the fact that the Spectrum is by far the most popular micro in Britain, and is a serious contender for the number one position in the world, Sir Clive gives the impression he would have preferred to have sold fewer machines and have them taken as seriously as the BBC machines.

He is an innovative thinker who sees himself as changing the world for the better. He does not like to think of himself as the mastermind behind the best value games machine on the market.

All that would appear to make little difference to the consumer. There are however two problems which could arise.

Competition is good for the consumer providing that it is fair competition. Advertising which makes outrageous claims about one machine's reliability and another's lack of it does nothing to help anyone. It does not enable customers to take better informed decisions but instead only confuses. That means that more people will make bad decisions about which computer to buy and find they have a machine which does not suit their needs.

Secondly, the industry is reaching a turning point. The tremendous growth of the past few years, for which Sir Clive is responsible, is over. If the market is to see further growth a manufacturer has to take the quantum leap of producing a machine that will appeal to the majority of the population which has shown no inclination to join the computer-owning classes.

What is needed is a person with the vision to see what those people will find attractive and then provide it. On past experience there is only one person who has demonstrated that necessary imagination – Sir Clive Sinclair.

Games-playing is not to be sneered at. It has already made the Spectrum the most popular computer in the UK, and surveys indicate that most alien-zappers sooner or later progress to exploring the full potential of their machines.

Sinclair declares Spectrum price war

THE SPECTRUM is to be discontinued and the Spectrum Plus to be priced at £129.95 in a series of massive price cutting moves by Sinclair Research.

The shock moves come only weeks after the announcement of an upgrade kit which turns the Spectrum into a Spectrum Plus for £50. Kits will now

Radioactive micro fashion

WHAT, you might wonder, is the well-dressed computer user going to wear this Spring? What better than the Microshield VDU Smock?

Surprisingly, that is not as funny as it may seem at first. There is great controversy as to whether or not radiation from VDU screens is harmful. Your 14in portable TV gives off far more radiation than a commercial VDU so if your bits start slipping you will know why.

As yet, the question of TV radiation affecting home computer users has not been raised, possibly because it appears mainly to affect pregnant women and there are few female users.

Details from Rolenworth International Ltd, 8 North Street, Chichester, West Sussex PD19 1LB. Tel 0243-774271.

cost £30.00 if installed by Sinclair Research and £20.00 in do-it-yourself form.

Reasons for the cuts, which could lead to a new price war, were given by Sir Clive Sinclair. "The home computer market is currently entering a very vigorous phase and we anticipate strong competition from US manufacturers in particular".

As a result, Acorn Computers has brought the price of the Electron in line with that of the Plus, to £129.95.

All is not well, however, in the add-on business. Companies such as DK'tronics and Saga Systems could lose business in the keyboard market. David White of Saga says: "We have brought

down the price of our Emperor keyboard from £55.95 to £49.95. We think that people will still want to put a good keyboard onto their machines."

The one piece of bad news in the package concerns the Six-Pack sold with the Spectrum Plus. Customers will now have to pay a promotional price of £14.95 to obtain the six titles, worth £67.00.

Celebrations of Sinclair's success in the computer market continued at the *Which Computer?* Show in Birmingham. A competition was held in which the five millionth computer was up for grabs. In typical Sinclair style it was a gold coloured QL.

Reports of death greatly exaggerated

THE HOME computer boom is over, according to recent reports in the national press.

Except for the Sinclair Spectrum and Commodore 64, computer sales last Christmas did not live up to expectations and it is doubtful whether the predicted one million units were sold.

Of all the hardware manufacturers, Sir Clive Sinclair is the happiest, describing the Christmas season as "extremely good and way up on last year".

Gary Lockwood, PR agent for Commodore, comments, "the Commodore 64 has exceeded our expectations", and on the subject of Commodore's sales over the Christmas period, says, "we have not got our exact sales figures at present and I am not going to pick a number out of the air — which is

what Sir Clive has done".

Acorn suffered its worst Christmas ever. The *Sunday Times* reported that despite a £4.5m pre-Christmas advertising campaign, Acorn's sales fell far short of its target of 30,000 machines.

Dealers overstocked and, when the Christmas rush didn't happen, were lopping as much as £40.00 off the BBC price.

Perhaps the biggest surprise was the lack of MSX hardware. Although the Japanese are eager to corner a large section of the UK market, there were only a few thousand MSXs for sale, mostly from Toshiba, Sanyo and Sony.

There have been predictions of doom ever since the computer industry evolved. 1985 will be the turning point for many but competition is still fierce.

Micronet matters

ONE OF four young hackers involved in the recent spectacular breach of Prestel security — during which the Duke of Edinburgh's private electronic mail was examined — has been recruited by Clive Sinclair for a job at his Cambridge Metalab.

The hacker, who remains anonymous, was given this remarkable reward for ingenuity after explaining to Sir Clive how he and his friends managed to obtain the highest possible security clearance on the Prestel system and thereby gain complete power over the 350,000 page database.

The 19-year old Micronet member explained his new job as "investigating opportunities for Sinclair Research in the field of telecommunications"; he refused to say if this might be connected with the rumoured portable Spectrum with integral modem.

Micronet's *Chatline* is the most popular area on Prestel — and that's official.

Chatline is Micronet's 'Citizen's Band' emulator, allowing subscribers to send electronic messages, uncensored by the editorial staff, for immediate display to the thousands of other users.

Only two months after *Chatline*'s opening, over 15,000 messages were posted on the system during December 1984.

"It's just gossip," says Micronet Technical Manager, Mike Brown. "Nobody talks about technical stuff — it's just people chatting and talking about the things which friends discuss."

"The nicest thing is that people can feel they're being left alone to partake in their own event. Micronet just set up the facility and then walked away."

Sid Smith, Micronet news editor

Clivemobile cruises in

SIR CLIVE'S electric buggy — the Sinclair C5 — was unveiled at Alexandra Palace on January 10, almost a year after the launch of the controversial QL.

Before the assembled and sceptical press Sir Clive announced his latest revolutionary product — a battery-powered tricycle, the result of 10 year's research and development, and over £7m of investment.

With a top speed of 15mph and a range of only 20 miles, the vehicle is termed a 'pedal-assisted cycle' and can be driven by anyone aged over 14, without needing a driving licence, road tax, insurance or helmet.

The open top, single-seater is steered by handlebars placed, surprisingly, underneath the driver's thighs. It is nevertheless

easy and comfortable to drive. The battery is recharged by connecting it to a domestic power socket for eight hours; its range might be considerably less than the 20 miles stated, depending on road conditions and manoeuvres.

The basic machine costs £399. It is available through mail order only at first, with an additional £29 for delivery, though retail outlets are

planned by the summer. Optional extras, considered by many to be essential, include wing mirrors, indicators, horn, seat cushions and weather-proof clothing. Those push up the price to more than £600.

The C5 has met with widespread criticism in the press and on TV: the British Safety Council, the Royal Society for the Prevention of Accidents and the Auto-

mobile Association have also expressed reservations about its safety on the roads. The AA says, "It could, due to its size and inconspicuousness, present a hazard to its occupant and other road users."

Sir Clive is dismissive of critics, claiming that the trike is safer than any conventional two-wheeled transport, but admitted at the launch that it had not yet been test-driven in daytime traffic on public roads.

Sinclair Vehicles is hoping for sales in excess of 100,000 in 1985. Orders were taken at Alexandra Palace, and sales approached 1,000 in the first week.

Currah vow of silence

CURRAH will never speak again. The company which made the speech synthesis products for the Spectrum and Commodore 64 has been bought recently by DK'tronics for a substantial but undisclosed sum. Says David Heelas, head of DK, "The purchase of Currah is a natural complement to our existing range."

DK'tronics has bought the sole rights to manufacture and sell Microspeech, Speech 64, Microslot and Microsource and will be manufacturing those products at their factory.

However, John Herrin, chairman of Welwyn Electronics — which manufactured the Currah products before the takeover — stated in the *Standard*, "Welwyn will be taking over sales as well as manufacture . . . we expect to treble production to some 250,000 units this

year." Apparently, Welwyn are looking for a turnover of some £7,500,000 from sales in the first year and have formed a sales and marketing team to sell the products direct to retail outlets and distributors as agreed under the original contract.

David Heelas was not pleased with the news. "Welwyn has no right to sell anything after it has disposed of its stocks." He added, "we have all the tools for the injection-moulded cases". Those will be supplied to Welwyn under the terms of the contract and in that way, Heelas reckons he will be able to monitor the number of units Welwyn will be producing.

Under the terms of Welwyn's contract with Currah was a clause stating that if Currah went into liquidation, Welwyn would have

the rights to sell the products remaining in stock and to manufacture a stated number of units.

Richard Philbrick from Welwyn says "Our output is limited to the terms of our contract, we will be selling and manufacturing around 120,000 units". That differs considerably from the 250,000 units stated by Welwyn's chairman in the *Standard*.

Welwyn's future in the home computer market seems to be limited unless it produces a product under its own name. Philbrick thinks that is a possibility and adds, "120,000 units is a lot of units in the speech market". DK'tronics will also be producing speech synthesisers but Philbrick is not worried, "DK'tronics hasn't many units and will have to start production from scratch."

Modem price slashed 30%

THE PRICE of the Prism VTX-5000 communications modem for the Spectrum has been cut from £99.95 to £69.95.

Paul Streeter, the sales director of Prism, is confident that the move will create more interest in computer networks such as Micronet 800. He says of the VTX: "The drop in price will clearly help it to appeal to a broader range of Spectrum owners who are keen to get into communications as long as the price is right."

The modem has been available for two years and was designed to work only with the Spectrum. It gives access to computer networks which provide users with telesoftware, viewdata services such as Prestel and electronic mailbox facilities on which messages can be left and answered.

The modem may undergo design changes in the future as a result of the discontinuation of the Spectrum. Such a move is being considered, claims Prism, but is unlikely in the near future.

Sir Clive hits out in pub punch-up

THE RIVALRY between Sir Clive Sinclair and former employee Chris Curry, now head of Acorn Computers, developed into open warfare over the Christmas period.

Having commissioned a survey on the reliability of micros which appeared to demonstrate the superiority of the BBC over the Spectrum, advertisements were placed in two national newspapers on behalf of Acorn, implying that Spectrums bought as Christmas presents would soon be taken back to the shops, and their owners would do better to buy BBC computers instead.

The advertisement so angered Sir Clive that he attacked Curry in the *Baron of Beef*, a Cambridge pub where both are regular cus-

Bugs attempt to sabotage free booklet

DUE to some unfortunate type-setting errors in last month's free booklet four of the programs contained errors in syntax.

Tip 18. Line 9915 contained an extra opening bracket at the beginning of the line. It should start `IF (PEEK(. . .`

Tip 31. Line 100 should read: `IF A(K) < B THEN LET B=A(K): LET D=K.` Line 135 should be inserted: `NEXT M`

Tip 36. At lines 30 and 40 `LENS` should read `LEN.`

Tip 47. The two extra opening brackets at the start of line 270 should be deleted.

We apologise to readers for these errors and hope that they are finding the booklet useful.

tomers. Sir Clive walked up to Curry and slapped him about the head, then argued with him about the advertisement. There was some shoving and jostling, and the two men later began fighting again in *Shades*, an upmarket Cambridge wine bar.

Such strong passions amazed the national press, which appear to have believed that the world of technology is populated by cold fish with few emotions. Sir Clive even fell victim to the notorious columnist Jean

Rook, who said in the *Daily Express* that she thought the fight gave him sex appeal.

The two leaders of British home computing are now said to have made up their differences, and Chris Curry was a welcome guest at Sir Clive's New Year's Eve party.

Sir Clive's brother Iain Sinclair comments, "It's nice to know our captains of industry are just as capable of letting their hair down and making complete idiots of themselves as the rest of us."

Spectrum + upgrade

SINCLAIR has just launched the official Spectrum Plus upgrade kit — so if you are feeling hard done by, having just bought a Spectrum 48K, cheer up because you can upgrade it for a mere £20.00.

The kit provides you with the new keyboard — complete with 58 hard, moulded keys including a space bar — an 80-page user guide and companion cassette which provides you with three arcade games and an 'interactive tour of the new keyboard'. You will, however, lose out on the free pack

of software which comes with a new Spectrum Plus.

According to Sinclair, you need no knowledge of electronics to tackle the upgrade, only a soldering iron and a steady hand.

If you do not feel up to the job, Sinclair will do it for you for £30.00 and return your computer within a record-breaking 10 days.

The Spectrum Plus upgrade will accept all peripherals in your Sinclair system. All future Spectrum peripherals are being designed with the Plus in mind.

Runner drops out of the race

FRONT RUNNER, the K-Tel software subsidiary, appears to be tightening its belt in 1985.

K-Tel entered the software market in 1983 and its first batch of releases included *It's Only Rock 'n' Roll*, which proved a minor success. The company name, Front Runner, was launched less than a year ago

and its recent releases include *Boulder Dash* and *Space Professor*.

However, the recession seems to be hitting even major record companies like K-Tel and a decision was taken recently to withdraw Front Runner from the LET show — a trade show at which almost every software house will be present.

The force is going soft

RETURN of the Jedi and *Deathstar Battle* form two major software releases from Sinclair Research.

The games, both for the Spectrum Plus, follow the adventures of Luke Skywalker and bear more than a slight resemblance to the events portrayed in the George Lucas *Star Wars* film trilogy.

The two packages will be part of the Spectrum Plus six pack, available free with the machine, replacing two other titles.

The fate of a stuntman

ELITE has suffered a small setback with its latest game — *Fall Guy*. A few days after its launch *Fall Guy* stumbled, damaging the game's turbo load facility in the process.

Five thousand copies of the game were initially released with the turbo load facility which refused to load the game at all. *Fall Guy* has since been recalled.

Steve Wilcox from Elite comments, "We immediately remastered the tape to produce the game without the turbo load. Anyone experiencing loading problems should return them to us for a replacement."

The fault can be rectified by adjusting the alignment of the cassette heads.

Sinclair upgrade for easier access

THE QLKIT, the toolkit from Sinclair Research, has at last been announced.

For £29.95 the QL owner gets a package of nearly 60 routines which have been written by QDOS author Tony Tebby. They include

Assembler price cut

THE Metacomco Assembler Development Package has been enhanced and its price dropped.

A linker has been added to enable assembler modules and user code to be chained together. Existing users will be able to obtain the upgrade for a sum which is as yet unspecified. The company says, however, that any charge will be nominal.

Metacomco hopes to draw a new type of customer with the price cut from £59.95 to £39.95. The company says that the new price will make the product more accessible to the growing number of home users of the QL.

First of the floppies?

A FLOPPY disc interface to supplement the Sinclair microdrives has been launched by Computamate.

The Q-Disk interface is available from WH Smith for £149.00. It is easy to plug in, says the manufacturer, and uses the RAM expansion slot at the left-hand side of the machine.

The operating system software which drives the product was written by QDOS author Tony Tebby. It uses the official Sinclair floppy disc format and is compatible with all software written for the QL. The company says that several companies have shown in-

terest in putting new software on disc using the system. a full screen editor, which is a welcome replacement for the inflexible line editor which resides in the machine, alternative character fonts and extended EXEC commands which allow programs and jobs from QDOS to be chained.

QLKit also provides easier access to the operating system. Pipes, such as those to be found in the Unix operating system, can be used to provide communication between programs, job

Big storage squeeze

THE STOP storage optimiser, from Digitex, will compress your microdrive files to as little as half their original size.

Digitex says that STOP, which is supplied on microdrive, will work on text files and data of any size; it makes the process of backing-up files easier and will work with any QL compatible software.

The optimiser uses a sim-

ple process. It reads the microdrive file, calculates the best practical way of condensing it and then produces another file which is about half the size of the original.

control is made simple and routines have been included for memory management. Other releases from the company include the standard specification for QL floppy disc interfaces and a QDOS programming manual.

The manual includes information necessary for programmers to get to grips with Tony Tebby's operating system. It costs £14.95 and will be available from Camberley.

STOP is recommended for use on large text files, Basic programs, word processor documents and data files. Digitex warns that it is not intended for use on code files, such as machine code.

The program can be obtained for £17.95 from Digitex Computers.

Initial releases

QL INTEGRATED Accounts, from Sagesoft, forms the centrepiece of a range of five new releases from Sinclair Research.

The package will retail at £89.95, a quarter of the amount charged for the program on other systems.

The other packages include **Cash Trader**, **Decision Maker**, **Program Planner** and **Touch and Go**.

Cash Trader, at £69.95, is the second major string in the Sinclair bow. Together

Hartnell's handy books

"PROGRAMS of originality and quality for all the family" are promised by Virgin Games in its new book of listings by Peter Shaw.

Games for your Sinclair QL, edited by Tim Hartnell, provides 20 games which you can type into the QL and retails at £2.95. Programs include Nimrod, Clock, Worms and Buzzphrase generator.

Hartnell has also launched his own book of listings and explanations. *Tim Hartnell's QL Handbook* retails at £7.95 and includes routines to produce a version of the programming language Logo, a section on creating adventures and programs to allow you to define your own character sets.

REGARDEZ

LANGUAGE LEARNING AIDS FOR
FRENCH, GERMAN & SPANISH

FOR BBC(32K) · ELECTRON
SPECTRUM (48K)

As used in numerous schools and colleges these programs provide a highly successful aid to modern language learning. Each cassette contains a sophisticated control program and a comprehensive series of vocabulary lessons which can be used in a variety of self-paced learning and test modes. Words, phrases etc are displayed with all necessary accents and special characters, different colours are used for masculine, feminine and neuter words to assist gender learning.

The programs are suitable for beginners, 0-level and beyond as simple commands enable new lessons in vocabulary or grammar to be created by the user, edited as required, then permanently saved for later use. Invaluable for homework and exam revision!

Two cassettes are available for each language, together these contain a vocabulary of thousands of words; Level A provides 16 lessons in general subjects; Level B provides a further 16 lessons including adjectives, adverbs and fully conjugated verb lists.

Available from your computer store or by mail order Price £9.95

BETA BASIC 1.8

ENHANCED BASIC FOR SPECTRUM 48K
FOR GRAPHICS — STRUCTURED PROGRAMMING
— DATA HANDLING

Release 1.8 is more powerful than ever! We don't have space to do this program justice — if you can't believe the ad, send us a large S.A.E. for further information.

Features: Commands are single-entry keywords in graphics mode. Syntax is checked on entry. Fully compatible with Spectrum Basic. Microdrive compatible. Comprehensive manual.

NOTE: Release 1.0 is still available for 16/48K Spectrum at £11.00.

ALTER screens colours (general or specific)	FILL enclosed area with specified ink or paper	RENUM versatile renumber
AUTO line numbering	GET wait for keypress	ROLL all or part of screen in any direction by specified number of pixels, with or without attributes
BREAK out of code loops	JOIN two program lines	SCROLL like ROLL, but without wrap round
CLOCK digital clock	KEYIN a string	SORT arrays (very fast)
CURSOR CONTROL CODES allow strings to have complex shapes	KEYWORDS new keywords sniiff	SPLIT program lines
DEF KEY user definable keys	LISTLIST line TO line	TRACE program execution
DELETE a block of lines	USED used with GOTO, GOSUB	UNLIL used with DO or LOOP
DO-LOOP structure	ON ERROR trap errors (with LINE, STAT and ERROR)	USING used with PRINT
DPOKE double poke	PLOT a string may contain cursor control codes	WHILE used with DO or LOOP
EDIT specified line	POKE a string	XCB, YCB move PLOT origin
ELSE used with IF... THEN	POP Basic's stack	XRG, YRG change PLOT scale
EXIT leave DO-LOOP	PROC, DEF PROC, END PROC (for named procedures)	

FUNCTIONS

AND (bit-by-bit)	HEX2 decimal to hexadecimal	RNDM fast RND
BIN2 decimal to binary	INSTR string search	SCRN recognises user graphics
CHARS number to 2 characters	MEM free memory	SIN2 fast sine
CODE fast cosine	MEMORY all of memory as a string	STRNG repeats strings
DEC hexadecimal to decimal	MOD modulus	TIME\$ current time
DPEEK double PEEK	NUMBER 2 characters to number	USING\$ formats numbers
FILL2 filled area	OR (bit-by-bit)	XOR (bit-by-bit)

Only £11.00 inclusive! (Upgrade price for Release 1.0 owners is £4.00. This includes a 12-page supplement to your manual. Please quote date of purchase. If you did not purchase from us, state supplier and return original cassette.)

Please send me:
Beta Basic, Release 1.8. Payment of £11.00 is enclosed.
(or £11.50 for foreign orders). Cheques payable to BETASOFT.

I don't believe it! Please send me full details of Beta Basic 1.8. I enclose a stamped addressed envelope.

As a result of SMT's purchasing power, we are now able to offer the superb Rotronics Wafadrive data storage system for only £99.95*. But hurry! Stocks will not last long. You've read the reviews. Now's your best chance to buy!

ROTRONICS WAFADRIVE

SMT Special offer!

Wafadrive only £99.95*

*Plus VAT and £2.00 post and packing

Integrated System

The Wafadrive is a complete system which contains the micro interface, two 128K drives, RS232 and Centronics ports, all in one attractively-styled, compact unit. There is a minimum of connecting leads and no extra boxes to clutter the desk top. Like the majority of professional systems, the units are dual drive. This offers the optimum balance between system flexibility and cost. Built-in serial and parallel interfaces allow the direct connection of just about any popular printer.

Fast and Reliable

The Wafadrive achieves very fast loading and saving, but not at the expense of reliability. Extensive research and the use of high grade materials ensure that the Wafadrive will give years of dependable operation. Data integrity is on a par with

floppy disk. Three fully interchangeable blank wafers in three sizes – 128K, 64K and 16K – are also included. Low capacity wafers give faster access. They are therefore most suitable for program development applications. The high capacity wafers are suitable for more general data storage. Loading rate is well over ten times as fast as cassette!

Software

Armed with the comprehensive user manuals, blank wafers and superb Spectral Writer word processor, you'll have a professional system to be proud of. See the coupon below for details of the rapidly growing range of software to enable the

programmer and games player to exploit the Wafadrive system to the full.

Buy Now!

Cheap, reliable mass data storage for the Spectrum has finally arrived – make sure you benefit from SMT's special offer. Clip the coupon below and your order will receive immediate attention.

Clive eats pub curry

SIR CLIVE has added fisticuffs to his already formidable verbal arsenal of offensive weapons against business rivals. You will have read already of the bust-up before Christmas at a Cambridge pub. Gremlin however is delighted to bring you an account of the proceedings as described by a short, stout, inebriated eye-witness

Jack 'Business is War' Tramiel, having just bought Atari, explains the technology behind the company's latest word processing package.

who has been held incommunicado for the past three months pending negotiations with the Gremlin slush fund.

The microworld's answer to Frank Bruno stormed through the doors of the *Baron of Beef*, elbowed his way through the crowd and slapped Acorn supremo **Chris Curry** about the head with an open hand, reports our informant — a closed fist being, of course, illegal in all-in wrestling. Curry, who has already taken an early bath at Clive's dive — Gremlin, January — dragged the enraged tycoon behind a partition where a frank and candid exchange of views took place.

Sluggo Sinclair then reappeared, holding Curry in the notorious twisted-ear-

grip, now outlawed from the ring, and waving the Acorn advertisement which had offended him. He introduced Curry to the assembled drinkers as a 'very silly little boy' or words to that effect. Whereupon both corners retired to an exclusive wine bar, *Shades*, to continue their negotiations.

Those expecting a rematch at Big Uncle's New Year's thrash, to which Curry was invited, were disappointed. The two are reported to have spent an amicable evening together at the same table. Another guest was the landlord of the *Baron of Beef*, Bob 'they are both respected customers of mine and I have no further comment' Wass. Perhaps Sir Clive is beginning to learn something about the gentle art of public relations

Not everybody talks with his fists, however. One Alan Osborne, currently squatting in Amsterdam, has been writing letters to various magazines complaining that his Commodore 64 game **Havoc** has been ripped off for the Spectrum and generally abused in the process. Osborne wants everybody to boycott the Spectrum version, which reviewers agree is eminently avoidable.

Dynavision, which publishes both versions, now hopes to receive a letter from Alan declining to accept royalties for the Spectrum version. What, and spoil all the fun? . . .

Spoiling all the fun for **BBC** owners is journalist Mike Cook of *Micro User*. Answering a reader's problem, he advised that a particular error message meant

the machine was about to explode. Hundreds of owners of the swanky Beeb — a machine for social climbers if ever there was one — displayed their collective genius by believing the joke. One housewife dunked hers in a bucket of water, which must have done wonders for the notoriously slow tape-load system . . .

The two-part *Masquerade* spin-off **Hare-restorer** refuses to give up the ghost. **Haresoft's** prolific PR agency are now claiming the boring brainteaser is being bought by schools "to involve pupils in developing computer logic skills". "We couldn't make an awful lot of sense of it," says headmaster Peter Holman. "I think most schools bought **Hareraiser** to try and win the £30,000 for their school. That's certainly why we had a look at it."

Gremlin thanks Peter for his comments, and Jeff Lubbock at Haresoft for arranging the interview. Better luck next time, Jeff

Brazen Backslappers of the Month award goes to **Imperial Software**, responsible for **Empires**, the intergalactic yawn that needs at least four Spectrums to play at a rate of one move per forty minutes.

Players are said to be "in the grip of a galactic cult", according to director Steve

Baker. He also says he "receives phone calls every day from nuts", which speaks for itself, really . . .

Also speaking for himself is programmer Don Priestley, who wrote **Minder** for **DK 'tronics**. To himself as well, to judge from the three pages of drivel emanating from his 'seminar' on the game. We are told that TV spinoffs are encouraging programmers to develop new forms of Artificial Intelligence. Priestley says he's not sure what AI is, but whatever it is, **Minder** has got it . . .

They call it the electric slipper down at **Sinclair Research** when **Sluggo** isn't listening. The excitingly named **C5**, the ZX-80 of the motoring world, may yet refute cynics and scoffers, but so far automobile expert **Sir Clive** has declined to drive his electric trike through the London traffic to demonstrate its roadworthiness.

What Gremlin would like to know is, when is **Kempston** bringing out a joystick interface to replace those dreadful handlebars? And, given a name like **C5**, what was so awful about the first four models? A million unsold copies of **Driller Tanks** to any reader who can answer these burning questions about the finest washing machine ever to hit the streets . . .

Huge killer busts of Sir Clive roam the countryside seeking out the organisers of the Quickbyte awards. Sinclair won the We Acquire Software Titles Earnestly award for its acquisition of the Imagine mega-con Banderbotch.

RAM MAKE MORE OF YOUR SPECTRUM...

Two great new add-ons to boost the power of your Spectrum (and Spectrum Plus).

The Ram Interface Mk.II is Kempston compatible. It lets you get the best out of your action games, with all the best joysticks around - even the Quickshot II rapid fire joystick. Electrify your enemies, with real power and lightning-fast reactions at your fingertips.

Pirate bashing is puritanical

THE rather sanctimonious letter of Andrew Turek bemoaning children who copy programmes because they can't afford the originals — January *Sinclair User* — should be taken with a pinch of salt, because of what he left unsaid.

If it is wrong for children to "pirate" games, can the often extortionate prices charged by some software houses be morally defensible?

Most people I see buying games programs in Telford are children, and the attitude pervading part of the industry is summed up in a short story by Robert Heinlein — *The Man Who Sold The Moon* — in which two rather dubious characters say "... I want an angle to squeeze dimes out of school kids, too." ... "Why stop at a dime?"

An old business maxim is 'charge what the market will bear.' School-child piracy indicates that the price is generally higher than the market will bear, but that greedy or stupid software makers will not see it. Some houses have and are to be praised.

Perhaps children are not the willing dupes that the 'adults' — and I use the word with reservations — controlling some software houses seem to hope, and will refuse to use their pocket money to subsidise the financial aspirations of people who want to get rich very quick.

Could Mr Turek please explain the difference to readers of *Sinclair User* between a software house deliberately setting out to market a copy of a board game without first bothering to obtain the permission of the legitimate copyright holders, and a school child who

makes one copy of a game for a friend?

The answer is, of course, that the software house hires an army of lawyers to prove why they should be allowed to pirate other people's work.

Right and wrong exist for people who make things as well as for those who use them, and it is high time that everyone realised that.

**Martin Scholes,
Telford, Shropshire.**

IN REPLY to the comments on pirate-copying, may I say that here in Zimbabwe there is really no other way of obtaining games but by copying. There are no personal computer stores here, so we have to order from Britain or South Africa.

However, we are only allowed an allowance of Z\$360 — which is about £200 — per person, per year. We must live on this when we go on holidays outside the country. That amount must also be used to buy hardware and software. If you do you have to pay a 69 per cent customs tax. A Spectrum bought privately here, with no extras, costs Z\$800.

**Jonathan Waters,
Harare,
Zimbabwe.**

New improved print driver

WHILE agreeing with all that is said in your review of the Print-SP, Spectrum Centronics Interface — January, *Hardware World* — we feel that the heading of 'New COPY causes corruption' is confusing if not misleading. May we point out what your reviewer has very correctly said, that if the printer driver routine has already been loaded then

a NEW command should not be executed.

We have accepted his constructive criticism and Print-SP is now supplied with a second printer driver routine which resides above RAMTOP.

Print-SP is meant to be a low cost, utilitarian unit. Those who want a sophisticated unit will have to wait a few weeks longer for our Polyprint which displays and prints in up to eight languages.

**L Dicks,
Cambridge
Microelectronics,
Cambridge.**

Up against a brick wall

I HAVE *Knight Lore* from Ultimate but I find it very hard. I can't get over or around walls.

**Peter McCabe,
Basildon,
Essex.**

● Try standing on one of the objects which you have collected, not forgetting to pull it up after you as you jump over.

Reviews are influential

I FIRST bought *Sinclair User* six months ago, before I bought my Spectrum. Using the ads and features I

Hewson's prompt

THE REPLY given by Andrew Hewson to Mike Hughes' query — January 1985 — is unnecessarily complicated. The query concerned the suppression of the "start tape and press any key" prompt when saving multiple program parts. In fact this can be achieved by a simple POKE before each Part which is to be saved, POKE 23736,181.

In a program the line which does all the saving would look something like
5000 SAVE "TITLES"
DATA A\$: POKE
23736,181: SAVE "AU-

was able to plan ahead, and know exactly what I wanted from my machine and the software available.

My favourite section is Spectrum Software Scene because you show an exact copy of the tape on the TV screen, one thing that put me off buying TLL, by Vortex.

Good luck in the future with your mag. You've got it right.

**S P Strong,
Betws-y-coed,
Gwynedd.**

Last word on Sabre Wulf

I AM just writing to update the Sabre Wulf affair.

I finished the game on a much earlier date than June 7, in fact before it was made generally available. My dad, who owns a software shop in the Outer Hebrides, was given a pre-production copy.

I decided that five minutes work was not worth writing about, until now.

I claim to be mega super incredible amazing wonderful Sabre Wulf King.

P.S. I finished (my first go) with a score of 300 (clocked 8 times) and 99%.

**Jeremy Gilder,
Beaconsfield,
Buckinghamshire.**

THORS" DATA B\$: POKE 23736,181: SAVE "SUBJECT" DATA C\$()

It is not advisable to put the Poke before the first item to be saved otherwise the SAVE would start without warning. Once the SAVE is underway then all the parts would be saved continuously. Note that all parts of the program, the screen display, the variables and machine code can be saved by this method.

**John Bloxham,
Stratford-upon-Avon,
Warwickshire.**

more letters on page 20

Faulty interface was reviewed

I WAS most concerned to hear from one of our many satisfied customers that your review in *Hardware World* of the AGF Protocol 4 joystick interface which appeared in the January *Sinclair User*, described certain operating problems with regard to the card programming system and controller movement response times.

Those problems are obviously the result of a defective unit and not a mode of operation which we would expect any of our customers to tolerate and I am most surprised that your reviewer considers those to be normal operating conditions.

I do note, however, that your tests were carried out on a pre-production unit and whilst I appreciate that your evaluation has to be based entirely on what you are given, it concerns me that much time and effort can be spent developing a product whose reputation can be instantly marred by comments which might be best levelled at the originator first in order to assess their validity. That would avoid misrepresentation and also a possible lack of credibility of reviews when users find that listed faults do not exist on their units.

Concerning the comment regarding limited life of membranes, regardless of our well-founded confidence in this proven technology, a quick calculation reveals that, even considering the worst possible parameters of operation, a card can be inserted 274 times a day over a period of 10 years without any adverse affect to the switching characteristics of the membrane. It is as well to remember that membranes are now widely used

in keyboards which receive fairly constant operation — inserting and removing program cards is done relatively rarely.

The use of membrane switching on the Protocol 4 is a contributing factor to our 18-month guarantee on the product as it greatly enhances the reliability of operation.

In closing, I would suggest your reviewer should return his interface for immediate replacement as that is what we would expect anyone to do if any of our products fail to operate correctly.

A G Fosberry,
AGF Hardware,
Bognor Regis,
West Sussex.

Allophones explained

IN reply to Declan Grady — Letters, January — full information on the SPO256-AL2 allophone set can be obtained from Maplin's Project Book Six. It contains a section called 'Allophone Speech Synthesis Technique' including information on the allophone names and length, sound, values in decimal, hex and oct.

It is available from Maplin Electronic Supplies, PO Box 3, Rayleigh, Essex SS6 8LR. Price 70 pence plus 50 p&p.

Rex Perkins,
Watford,
Herts.

The meaning of the word

AS AN ex-university lecturer with 10 years of research into computer languages and their implementation by code generation and interpretation, I must take issue with a statement in your

magazine that Metacomco have produced the first 'true compiler' for the QL — *Sinclair User* January 1985.

Computer One has been selling a Pascal compiler for the QL since late summer. In fact we were the first company to sell a range of languages for the QL. Although our compiler produces a fast compact version of P-code which is subsequently interpreted this is still a 'true' compiler implementing full Pascal. You would have been more accurate to say their BCPL compiler was the first to produce 68000 machine code.

Hamish I E Gunn,
Technical Director,
Computer One,
Cambridge.

● *John Gilbert replies: While agreeing with Mr Gunn that the Metacomco compiler could be more accurately described as producing 68000 code the term 'true compiler' has become a loose one meaning 'a package which generates true machine code'. If my use of this term has misled any readers then I can only apologise to Computer One.*

High-score scaremonger

I CLAIM to have the highest score on **Hunchback**, to be the first person to finish **Beach-Head**, and **Ghostbusters**.

On **Hunchback** I scored 1,800,900. I bought **Beach-Head** on the morning of

In defence of dirt

I AM writing in protest against your unfair review of **Travel with Trashman** in your December edition. Despite your reviewer's shocked attitude, I went out and bought it, and it turned out to be a very good purchase. I agree that Jerusalem and Benares are in bad taste, but the rest is tremendous.

I have managed to complete, in one game, all the screens except Kanyu,

December 8 and finished it after one hour. I finished **Ghostbusters** on my sixth attempt, on December 24.

In the latter, when you reach the Temple of Zuul, you must avoid the Marshmallow Man and close the portal to the spirit world. When you do this, it gives you an account number. I have \$22,600, and my account number is 11527002.

Miles Sturt,
Horsham,
West Sussex.

Call for a ZX-81 club

HAVING read Robert Tempest's letter in the December 1984 issue of *Sinclair User*, concerning a general lack of ZX-81 software and features, I can only give my wholehearted support to his points of view.

However, as I am not one to sit around and complain, I should like to suggest to Mr Tempest and the many, many other frustrated ZX-81 users, that they should band together to form some sort of national, postal, users' club for owners of that excellent little machine.

If there is anyone out there who has similar thoughts on the matter then please write to me.

Iain Dale,
78 Cobden Street,
Thornaby,
Stockton-on-Tees,
Cleveland, TS17 7ET.

where the irksome little guy with the spear manages not only to bump into me, but also to out-run me. There are also various interesting 'things' on each screen. For instance, has anyone tried going into the large, dark arch on Moscow, the little hut doors on Kanyu, or behind the set of steps in Madrid? **Nick Liassides,**
aged 15,
Worthing, Sussex.

KEMPSTON

MICRO ELECTRONICS LTD

CENTRONICS, RS232 INTERFACES

Printer interfaces for the ZX Spectrum allowing you to use a wide range of printers.

BBC PRO JOYSTICK

Complements the BBC computer in both design and performance. 8-way micro switches for precision control.

KEMPSTON JOYSTICK INTERFACE

Allows all joysticks in the Kempston range and others that are Atari compatible to be used with the Spectrum.

PRO 3000/5000 JOYSTICKS

Kempston's proven winners with excellent arcade quality action. Suitable for Atari, Commodore 64 & Sinclair ZX Spectrum (when used in conjunction with a Kempston Joystick Interface).

JUNIOR PRO JOYSTICK

Offering maximum arcade quality features at an unbeatable price. Available in a special Combination pack with the Kempston Joystick Interface.

PRO JOYSTICK INTERFACE

The ultimate interface for the ZX Spectrum. Compatible with the Sinclair/Psion software, Kempston Joystick software and cursor key software, together with cartridge slot for ROM based software.

The ZX Spectrum
Expansion System. Only £99.⁹⁵

Sinclair's complete alternative to floppy discs...

**The ZX Spectrum
Expansion System contains:**

- One ZX Microdrive
- One ZX Interface 1
- One wallet containing four programs on Microdrive cartridge
- Microdrive demonstration cartridge
- One blank Microdrive cartridge
- Full documentation
- Connecting lead for Microdrive/Interface 1
- ZX Net Lead

The new ZX Spectrum +

Fully compatible with all Spectrum software and peripherals, including this Expansion System

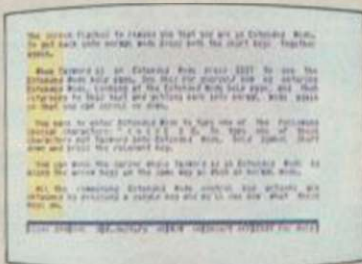

Tasword Two word processor

Turns your ZX Spectrum into a high-quality word processor!

Tasword Two has all the essential features of professional word processing packages – move and copy, insert, margin settings, 'help' pages, find and replace, and much more.

Written by Tasman Software Ltd.

Usual price (RRP): £13.90.

Games Designer

Now, all you need to create original games are original ideas – and Games Designer! It has eight, very different, pre-programmed games for you to play as they are – or modify out of all recognition!

There's never before been an easier, more enjoyable, way into games design.

Written by Quicksilver Ltd.

Usual price (RRP): £14.95.

Masterfile filing system

Address lists...personal files...stock inventories...stamp or album collections...club records...recipes...if you can file it, you can Masterfile it!

Masterfile is a menu-driven filing and retrieval system of immense power. Display formats are user-defined, so the range of applications is enormous.

Written by Campbell Systems Ltd.

Usual price (RRP): £16.95.

Ant Attack

The all-time classic 3D strategy game. Ant Attack combines stunning Escher-like graphics with fast-moving action and a real tactical challenge.

Your task is to enter the walled city, seek out your captured partner, and escape. At all times you can choose from four angles of view. But beware: the city is patrolled by giant ants...

Written by Quicksilver Ltd. Usual price (RRP): £6.95.

All programs run on a 48K Spectrum or Spectrum+. Recommended retail prices are for each program on cassette.

...includes this great set of Microdrive programs!

The unique ZX Microdrive system sets the Spectrum apart from all other home computers.

It gives you all the advantages of floppy disc drives – at a fraction of the cost. And tests show the Microdrives are faster than some disc drives.

Now, the complete Microdrive system comes in one package – together with four of the best-ever Spectrum programs, on Microdrive cartridges.

This software alone would normally cost you over £50.

Yet the Sinclair price for the complete ZX Spectrum Expansion Pack is just £99.95!

You'll find full details of its contents in the panel opposite.

ZX Microdrives – another Sinclair first!

The ZX Microdrive is a revolutionary fast access/mass storage device. And it's the only truly affordable alternative to disc drives ...

- Loads or saves up to 85K of program or data from Microdrive cartridges.

- Just 3.5 seconds to access a typical file.
- Only 9 seconds to load a typical 48K program.

The ZX Microdrive cartridge – a unique storage medium.

Smaller than a matchbox, the ZX Microdrive cartridge packs in a massive amount of data and programs.

Each Microdrive cartridge holds at least 85K bytes of data or programs (that's 30 pages of A4 text). And you can store up to 50 different data files per cartridge, identified by titles of your choice.

Every cartridge comes in its own protective case. Simply remove the cartridge, slot it into the Microdrive, and it's ready to use.

ZX Interface 1 – adds powerful new capabilities to your Spectrum.

ZX Interface 1 connects to the back of your Spectrum and controls up to 8 Microdrives. (Additional Microdrives are available for £49.95 each.)

It also gives you:

- An RS 232 interface – to link your Spectrum with full-size printers, other

computers using RS 232 (the industry-standard interface) and provide data transmission over telephone lines, via modems.

- ZX Net – lets you set up a local area network of up to 64 Spectrums, for high-speed data communications between you and Spectrum-owning friends.

At your local Sinclair stockist – today!

The ZX Spectrum Expansion System adds an exciting new dimension to Spectrum and Spectrum+ computing. At £99.95 it's superb value too.

To find out more, call in at your local Sinclair stockist now!

STOP PRESS: SAGA 1 EMPEROR NOW SPECTRUM + COMPATIBLE. NEW PRICE £49.95 (Please state model)

SAGA 1 EMPEROR

Sheer Elegance
AVAILABLE NOW

THE KEYBOARD FOR ZX SPECTRUM COMPUTERS

- * **EASY FITTING**
- * **PLEASURE TO USE**
- * **LONG LASTING**

The Saga 1 Emperor, equipped with 67 keys, is a carefully designed replacement keyboard incorporating many special functions for the popular Spectrum Computer. For business or pleasure, the Emperor will make your computing time more productive and

enjoyable. The SAGA 1 Emperor will enable you to use the Spectrum as a powerful programming tool easier and faster.

The style is easy:- for your benefit, the SAGA 1 Emperor has been designed to ensure that available Spectrum Peripherals will fit in the usual manner.

The assembly of the keyboard is simple - and fast. No soldering required, so that within just 5 minutes you can replace your current ZX Spectrum with the new SAGA 1 Emperor.

AND ALL THIS FOR JUST £54.95 (inc. VAT)

SAGA P.C.!

Your very own Personal Carrier, partitioned to neatly accommodate your Spectrum, Saga 1 Emperor and peripherals; Tape Recorder; Power Supply; Cables, manuals and cassettes. Of solid and attractive construction the P.C. is ideal for storing and transporting your computer accessories. The case uses a strong double stitched and bound Black Calf Vinyl with a tough thick ABS inner compartment, leather buckles and a strong handle. Only **£26.95** (inc. VAT).

DUSTCOVER

Another top quality product, this expertly produced long-lasting bound and sewn dustcover has been specifically designed for the SAGA 1 Emperor; which will keep everything looking neat and dust free. Only **£4.95** (inc. VAT).

THE COLLECTION

SOUNDBOOST

Hear that keyboard click with a SAGA SOUNDBOOST. The SAGA SOUNDBOOST is a tiny electronic circuit which considerably enhances the sound volume and quality of the Spectrum sound output. Adjustable from a whisper to a roar, the SOUNDBOOST provides added realism and excitement for games players and security for programmers (Hear that Keyboard Click!). No cutting, no soldering - just connect. Only **£9.50** (inc. VAT).

FLEXICABLE

Developed to relieve your Spectrum from the pressure of life, to fit your Spectrum and your add-ons taking the load with ease. By popular demand we now have two versions of the 9 inch FLEXICABLE available to suit your needs.

Male-Female FLEXICABLE - **£12.45**
Female-Female FLEXICABLE - **£9.50**
Converter PCB - **£2.95**

More from DK stable

AS ONE of the oldest suppliers of add-ons for the Sinclair market, DK'tronics has built up a reputation for good, basic, hardware. The latest additions to its range for the Spectrum — two joystick interfaces, a printer interface and a sound generator — do not break any new ground but are well designed and constructed.

All use a new, restyled, case which can be used with the Spectrum Plus and should also fit most full-sized keyboards. In addition, three of the four items have through connectors — a welcome change.

The less expensive joystick interface is Kempston/Sinclair compatible. It has two standard joystick sockets on the top, the left Kempston and the right Sinclair — keys 6, 7, 8, 9

and 0 for fire. Priced at £13 it should prove popular with arcade fanatics. It does not have a through connector, and thus must be the last add-on attached.

For those who need a wider choice of keys the programmable interface at £22.95 could be the answer. It can be programmed using the tape provided or, when a game is running, via a

switch on the top. The tape allows you to program any of the keys, including Shift and Enter, and to read two or more keys at once, so you can move diagonally and fire at the same time.

The printer interface is disappointing. It can drive any Centronics printer but it has disadvantages which make it a doubtful buy.

The software tape pro-

Low cost for high quality print

A PRINTER is a major expense for most computer users but a number of low cost printers are becoming available. The Fastext 80 by Smith Corona is classed as a budget, Centronics, printer but it has most of the features you are likely to need. RS232 is an optional extra.

As well as normal-sized text you can print in Condensed, elite or enlarged type — all with true descenders, change the international character set, underline characters and change the

line spacing and form length. An automatic line feed can be set using the single DIP switch on the back of the printer and in graphics mode you can print up to 576 dots.

The standard printer can accept paper up to 10in. wide and a tractor feed can be added for fan-fold paper. The friction feed works tolerably well but snags, occasionally. At normal print size it prints at a fast 80 cps.

With all that it should be

a reasonable buy but there are problems. The first are the instructions. The initial setting up is well documented but the list of control codes is poorly laid out and is a mine-field for newcomers. Although the codes are Epson compatible the common DCA is replaced by ESC W, ESC J executes at n/72 rather than n/216 and ESC C only operates on the number of lines.

The front panel has only an on-line button, line feeds and form feeds have to be sent by software or by using the manual knob. There is an LED to show if you are on-line but there is 'no end of paper' warning.

All the above could be forgiven if the printer were competitively priced, but at £224.25, plus £17.25 for a tractor feed and £8.20 for extra ribbons, it is not. For the same price you can get an Epson RX80 which has a proven track record and cheaper ribbons.

vided has two pieces of code on it, one for Epson compatibles and the other for the MCP 40. The Epson code is only 520 bytes long and redirects LPRINT and LLIST to the printer. A copy routine is included but only in one size and, when tested on an Epson printer, appeared to give a line feed which was out by 1/72in. The bottom two lines of the screen are not copied. The MCP code is 680 bytes long and includes a half-sized copy option as well as supporting the INK command.

For MCP 40 users the interface might well be a good buy at £39.95 but Epson or Seikosha users who want to use COPY should look carefully before buying.

The Sound Generator, priced £29.95, is based around the ever popular AY-3-8912 chip and includes a built-in amplifier and external speaker; it also amplifies the BEEP. The problem with this chip is that it is not one of the easiest to program, although thorough instructions are included that show you how to do this in Basic or code.

To overcome that, software is included on tape which allows you to write a tune in three-part harmony and replay it. You cannot alter the length of note — you have to enter two notes to double the length — nor edit a voice once it is entered; you are limited to 256 notes per voice.

The chip has 15 envelopes built in and a different one, and/or noise, can be assigned to each voice. That, again, is rather basic and reflects the age of the chip.

Although the chip is well known the problem has always been lack of support from software writers. DK'tronics is well placed to change this and some future releases will contain routines to drive the generator.

more hardware on page 26

Tactile teacher

FOR MANY applications the standard QWERTY keyboard is far from ideal. The Touchmaster, from Touchmaster Ltd, is one way to make data input easier.

It is a pad with a flat surface on which, as you draw, the position of the pen is returned to the computer. By using a number of different overlays different parts of the pad can be made to represent different things and so the keyboard can almost be dispensed with.

The Touchmaster is sold as a complete package of pad, power supply, stylus, interface and a drawing program. Interfaces are

available for a number of computers — Spectrum, BBC, Commodore 64, VC, 20 and Dragon — so if you change your computer you need only a new interface. As the package costs £149.95 that is a definite advantage.

The Spectrum interface is a standard black box which fits flat into the user port. An extension edge connector is provided on the back and a 3ft cable connects to the parallel socket on the pad. The pad also has a serial connector, possibly useful for a QL version, and a socket marked 'Foot Switch' but there is nothing in the instructions about that.

The drawing program, called Multipaint, has a number of features but does not compare too well with other drawing programs. On

the plus side, apart from entering text and loading the program, the keyboard does not have to be used, which consequently speeds drawing. When drawing freehand you can alter the 'brush' to give different thicknesses and styles.

The usual facilities of filling areas, drawing circles, boxes and polygons and changing the attributes are available. You can load and save screens but for some reason that facility could not be made to work. What it lacks are the grid overlays, magnification, scrolling and flipping of the more comprehensive programs. You can only draw on the top 22 lines of the screen and, as there is no grid on the pad overlay, you can easily lose your position.

Touchmaster sells a number of other programs for

use with the pad.

Of the three we look at — **Simon's Shapes**, **Simon Saw** and **Simon Says** — only the last one would hold a child's attention for long.

Simon Saw entails finding the correct jigsaw pieces to make a picture. If you succeed you can feed the cat. In **Simon Says** you build up a cartoon style photo-fit face. The computer then moves randomly some of the features and you have to repeat the sequence. You do that by pressing either the feature or the word on the pad. Then you get to feed the by now grossly overweight cat.

Although the instructions say you can run the Touchmaster using your finger, instead of the stylus, it needed more pressure than a small child could give. That may be because it was new but try one out if you are buying for your children.

The only comparable product to the Touchmaster is the *British Micro Graphpad*. The Graphpad is about £6.00 cheaper and has a superior drawing program but can not be swapped from one computer to another and, as yet, does not have any additional software. If Touchmaster can improve the quality of the software it could better realise its potential. Touchmaster Ltd, PO Box. 3, Port Talbot, West Glamorgan, SA13 1WH.

Assistant aid pack

IT often seems that the only qualification you need to work in a computer shop is a complete lack of knowledge about computers. How often have you asked an assistant a question, other than the price, to be told "I think it uses something called Basic", "it's got nice graphics", or "the expert will be in after school"? Help is at hand.

Stephen Adams has brought out a pack with which all the shop assistant has to do is plug it in the back of a Spectrum and turn on. The computer will then cycle through seven screens which show what it can do. The display is simple but it is better than being greeted by a row of blank screens in a store, simply because the assistant does not know how to load a program.

Further details of the unit, priced £50 plus VAT, from Stephen Adams, 1 Leswin Road, London N16 7NL. A customising service is also available.

Get turned on to reset

ONE advantage of the Spectrum Plus over the Spectrum and ZX-81 is the inclusion of a reset switch. That saves a lot of wear and tear on the power socket which, if it becomes too worn, can lead to reliability problems.

To save you the trouble of making your own switch, two companies, Yewser Friendly Products and Computerworld, have brought

out their own. Both consist of the inevitable little black box, into which the power lead is plugged, a push switch, an LED indicator and a lead to the computer.

The push switch on the YF unit turns the power on and off — like the switch on a bedside lamp — while that from Computerworld requires a simple push to break contact. Neither of the units is a substitute for

a mains on/off switch but both are convenient and simple to use.

Priced £5.45 for the Spectrum version, £4.95 for the ZX-81, plus 70p postage, the Yewser Friendly switch can be obtained from 7 Thames Street, Hampton, Middlesex TW12 2EW. Computerworld at 208 Kent House Road, Beckenham, Kent at £4.99 for a Spectrum unit.

GH**OST**BUSTERS™ THE COMPUTER GAME.

BY DAVID CRANE

© 1984 COLUMBIA PICTURES

Yes. Ghostbusters is a computer game, too.

The game play follows the film with incredible accuracy. Even down to the chart-topping music score.

Your task is to rid the world—and in particular New York City—of a cataclysmic plague of ectoplasmic nasties.

Play it well and we give you a Ghostbusters franchise—with your own secret account number. Use this number and the money it brings you, to buy the same ghost busting gear they had in the film. (Don't worry—we'll give you some money to get started.)

You will have earned it. And you can use it to go to undreamed of levels. Don't try to use someone else's number, we'll find out.

From then on, it's you against the ghosts. All the way to the Temple of Zuul.

Where the final battle begins...

Designed by USA's David "Pitfall II and Decathlon" Crane and running on Commodore 64 cassette and disk and Spectrum. Coming soon on other systems.

ACTIVISION®
Your computer was made for us.

AVAILABLE FROM SELECTED BRANCHES OF BOOTS, WH SMITH, JOHN MENZIES, LASKY'S, SPECTRUM, RUMBELOWS, WOOLWORTH AND GOOD COMPUTER SOFTWARE STORES EVERYWHERE.

Really inexpensive way of writing down whatever comes up on your computer screen.

Lightweight and totally portable — independent power source!

Normal, **EMPHASIZED**, CONDENSED and ENLARGED print.

Works perfectly in the dark even during a power cut!

45 characters per second (only in optional "totally-illegible-squiggly-line" mode).

Dear Me,
Even writes letters!

The New Epson Portable Printers.

Now the home computer user can have a true business quality printer, from Epson – maker of the world's most popular computer printers.

Our new P40 and P80 are only £99.95 and £184 respectively – and that's including VAT and mains recharger. They're suitable for BBC,

Sinclair, Commodore, Oric and almost any other popular home computer, as well as virtually any portable or desk top micro.

Running off their own rechargeable batteries as well as mains, they're totally portable and being Epson, an absolute doddle to use. And while the

P40 is particularly compact it too gives you 80-column width printing in condensed mode.

So wherever and whenever you want to print, now you can – with the new Epson portables. In fact, anything a ball-point does they can do – better.

Ring 01-200 0200 for details.

PERCY THE
POTTY PIGEON

COMMODORE 64 NOW AVAILABLE
SPECTRUM 48K

Make a suicide journey with our fluffy little friend Percy in his desperate attempts to build himself a cosy little home. Plunging to near certain destruction this crazy little bird has to pluck ten nest building twigs from the path of onrushing traffic, frantically avoiding the unwelcome attentions of a pigeon eating cat and starving ferret. Once off the tarmac the danger doesn't end as Percy carefully avoids the kamikaze planes, balloons and twig snatching sparrows before he can complete his nest and move to the next level. But don't be totally disheartened; our loveable little character has a few surprises of his own in the shape of revolting explosive eggs.

MONTY IS
INNOCENT!
COMING SOON

Damned by the nasties of the coal mining industry and their lacky socialist puppets for challenging the authority of their leadership when all he needed was compassion and warmth in his hour of need, poor Monty looks like serving a long stretch at Her Majesty's pleasure. But the heavy handed authorities hadn't counted on the wave of national outrage at our little friend's indisposition or the devious tricks and skills of his long time friend Sam Stoat. Watch carefully for the thrilling and nerve racking adventure these two encounter in springing Monty from his expectant doom.

COMING
SOON

Gremlin's collection of software hits are a must for any enthusiast's Xmas list. From fast moving action in Suicide Express to the absorbing skill of Monty Mole, play with Gremlin and those long cold winter days will pass in a flash. And don't be greedy - think of friends and family as well - they make great gifts and at a good price. Thanks to a little Gremlin Santa's job will be a little easier this year.

MONTY MOLE**
SPECTRUM 48K COMMODORE 64

MERRY
CHRISTMAS
£7.95
COMMODORE 64

With a long cold winter and bone chilling Christmas ahead, Monty Mole makes a daring, coal snatching raid to his local South Yorkshire pit. Grabbing a miner's bucket he heads off into the darkness, soon to wish he'd caught a cold instead. Alas there's no turning back. Onward to do battle with flying pickets and mammal eating fish; filling his bucket as he dodges the trundling coal crushers and roaming coal drills; keeping an eye on the constantly disappearing floor.

With his bucket filled, Monty makes his escape, only to surface in Arthur's castle where his way is blocked by a fiery figure seated on a graphite throne. Seizing his only chance of toppling the great man Monty collects the secret ballot papers and vote casting scroll. But Arthur's no fool when it comes to the heavy stuff and his personal bodyguard of super fit pickets and deadly flying hairsprays, put up an almighty struggle with our valiant Mole.

Wandering through the labyrinths of sleep
Through corridors that never end
Passed doors to other worlds and other times
From the beginnings of time to the very end
I'm destined to wander forever
On and on and on.
What do you want to do now?

The Sandman Cometh

ARE YOU lying comfortably? A little sand in your eyes and across the border of sleep you go.

The Sandman Cometh takes you into the shifting regions of the unconscious. Freud, Lewis Carroll and Her-

man Hesse are thrown together with liberal helpings of humour and fantasy to offer you a journey in search of the Hourglass of Infinity. Ghost trains, spies, gunslingers and perplexing puzzles await you in the palace of dreams.

The game is a standard text adventure with unobtrusive location graphics. Unusually, you are provided with the full vocabulary of the game if you care to ask for it. There are two 48K games on the cassette but you must obtain your 'ticket number' from the first to get into the second.

The adventure is attractively pre-

sented and the difficulty of the tasks and problems is progressive, so much so that you will soon find your head swimming. The concept is imaginative and allows the game to contain a number of different settings. Each is self-contained but you will need items from one scenario to help you in another.

Gift from the Gods

BENEATH the legendary palace of Mycenae, where Agamemnon the conqueror of Troy was horribly murdered by his wife Clytaemnestra, are vast labyrinths. Gates lead from one multi-tiered section to the next.

In Gift from the Gods you are cast as Orestes, son of the dead king. Your task is to collect certain geometric shapes from rooms within the maze and place some of them in their

correct arrangement inside the chamber of the Guardian. Only then is escape possible.

Your sister Electra will help you if you can locate her, whilst the shade of Clytaemnestra will attempt to destroy you by reducing your stamina.

The graphics are well made and the figure of Orestes walks and flies realistically. Technically an excellent production, but it does seem rather short on events. You can wander around the maze for quite a time with little happening to provide interest.

Gift from the Gods is a curate's egg really: long in technical merit, short on excitement.

Espionage

GET YOUR O Level chemistry textbooks out if you have the slightest intention of buying and playing Espionage.

The posh packaging may well lead you to think that you are getting some kind of fancy spy adventure set in the cut-throat world of JR. No way.

The program is a set of tests about oil and its chemistry and, unless you are interested in hydrocarbons in a

really heavy way, you'll soon find yourself swimming around in a big greasy mental pool of ethane, ethene, butene, butane, gasp, help.

You may deduce from errors in the information the identity of the mole in the company for which you are working. If petrochemicals are a closed book to you, this might be rather difficult.

Espionage is either mutton dressed up as lamb or homework masquerading as good clean fun.

The presentation is dull, the content dry and specialised and both the introductory and main programs failed to autorun. It may be useful if you want to be chairman of BP but if you just want a good time steer clear. Must rush off, my catalytic cracker's boiling.

Assignment East Berlin

AT CHECKPOINT Charlie only the swirling mists of the sub-Le Carré spy thriller show any signs of life. Checkpoint Charlie is the crossover point from West to East Berlin. It is also the starting point for Assignment East Berlin from Sterling Software.

Your job is to bring back the plans for LOBOT, a brain-numbingly important radio transmitter, and you are to achieve your patriotic objective in the conventional North-South-Get-

Rope-You-Are-Dead style of text adventures.

Unfortunately many of the conventional commands such as Inventory or Take are not supported, and consequently fiddling around trying to discover the correct words takes even longer than usual. Although the game is atmospheric, some of the detail is sloppy — what, for example, is a Russian guard doing manning an East German border post?

There is also a tendency to make problems unrealistic; the 'small book' turns out to be your passport, something you would know perfectly well

in real life. Such tricks spoil the illusion of involvement in an adventure.

Unattractively presented on-screen, and slow to respond, the game is less good than it should be. The story is not at all bad, and the ever-present threat of capture adds to the tension. It makes no sense therefore to spoil things by lumbering the user with a poor vocabulary and slow interpreter.

Skooldaze

SKOOLDAZE explodes into the imagination with a cloud of chalk dust and a hail of catapult bullets. It is one of those rare games where nothing over-ambitious is attempted in the way of programming but all the elements unite to provide an addictive and satisfying romp.

The screen displays a school, with classrooms spread over three floors. The playing area is not large, being about three screensful of scrolling school, but the careful planning of the game allows for plenty of action.

You are Eric, a Bad Boy whose dreadful school report is locked in the

headmaster's safe. The task is to get it out. Only the masters know the combination of the safe and to make them reveal it you must set all the school shields flashing by hitting them with your catapult. A nice refinement is that Mr Creak the History Master is a doddering fellow who cannot remember his part of the combination and must be forced to reveal it by writing his date of birth on his blackboard.

In between performing the quest, you must take part in the normal activities of the school — that is, playing and attending lessons. Instructions appear at the bottom of the screen and if you are caught in the wrong place by a master you will receive lines. 10,000 lines and you are sent home, and have to start again.

The characters of the game have a cartoon-style quality and represent school stereotypes — the trendy master, the bully, the tearaway and the swot. You can change the names to

those of your choice which should make the game even more fun.

Whether or not you want to attempt the extremely difficult problem of cracking the headmaster's safe, **Skooldaze** is tremendously enjoyable. You can have a great time simply trying to survive, as masters dole out lines with hideous abandon and, sometimes, quite unfairly. You can have catapult fights with other boys, and if you manage to fool a master into giving the bully or swot some lines then you lose some from your own tally.

They may not be the happiest days of your life, but **Skooldaze** should provide some of the happiest hours of the day.

Macman's Magic Mirror

TALK about Alice Through the Looking Glass! **MacMan's Magic Mirror** is an exploration of the world of mirror reflections, not only the relatively simple vertical mirror but also horizontal, a combination of both and diagonal.

The first problem presented is to match up pegs on the mirror screen moving MacMan around to place

them. There is a time limit, but using a joystick speeds up the action. When the pegs have been matched the next task is to reproduce a simple jigsaw and then comes the really fiendish problem of repeating a mirror image of patterned blocks. The puzzle requires careful observation, not only to recognise the pattern but also to reverse the blocks to their mirror image. It can be very tricky indeed especially using the horizontal/vertical mirror.

MacMan's Magic Mirror provides

plenty of practice in the all important skills of visual discrimination and observation of patterns in an entertaining and original way. The stated target age is four to eight but four year olds might find it rather difficult, and six to 10 is probably more appropriate.

Match Day

THE CROWD rises to its feet, screaming and cheering in frenzied excitement as two international teams are heralded onto the pitch by that well known tune from *Match of the Day*.

The scene is set for the cup final in **Match Day** from Ocean — the crowd falls silent as the teams prepare themselves. The whistle blows.

The Tooting Tigers fight desperately for supremacy, but they are out of their league. The Camden Crawlers start to win, scoring goal after goal. Ten-nil to the Crawlers at half time. The Tigers seem to have lost their claws and retreat desolated to the changing rooms.

Match Day is viewed from the eye of the camera with the pitch scrolling from left to right. Although move-

ment is slow there is a lot of detail in the program — your player can dribble, kick, head and throw the ball. The game includes corners and is as realistic as possible on the Spectrum.

As well as playing against the computer you can opt for a club match where as many as eight players can take part, each team playing the other through to the finals.

There is an extensive menu through which various game details can be altered — even to changing the team's name and colours.

You can control only one player at a time. He is always nearest the ball,

identified when his socks turn the same colour as his strip. This places you at a disadvantage when playing the computer as the opposing team work as one to get control of the ball.

There is no sound other than the introductory tune. Strangled beeps and squeaks filter from the computer at intervals throughout the game and sound more like a happy budgie than the grunts of the players.

It would be impossible to capture the atmosphere of football on a computer, but **Match Day** is a worthwhile attempt at reproducing a live game. If you are a football fanatic, you should enjoy this one.

Ghostbusters

THE SPIRITS of Christmas just passed may not have had the pleasure of the spectres from **Ghostbusters** in December due to a late release. The ghouls have, however, finally arrived and the results of programmer David Crane's hard work are likely to pay off as it is tipped for the bestseller charts.

The game has three phases each of which includes travelling around a city capturing ghosts with the equipment bought by you with a bank loan at the start of the game.

You can also select your mode of transport, which can be anything from a compact or 1963 hearse to a high

performance car which costs \$15,000. As you travel around the city map ghosts will float onto the screen and possess buildings which turn red when inhabited. Your aim is get into those buildings to catch the ghosts while running over and immobilising any spectres which you might find on the way.

When you arrive at the distressed building you must drop your trap and coax the itinerant ghoulie into the path of a mechanical arm which takes a grab at it.

At any point a Marshmallow Alert may sound and you will have to press the 'B' key to trap the mallow before it marshes all over the buildings. If he escapes from your trap then the city and your score will suffer.

Scaring, sorry, scoring, is achieved in two ways. You will gain \$100 for every ghost that you catch. If you attract a Marshmallowman, however, the mayor of the city will give you \$2000 for your trouble.

The game draws to its conclusion when the ultimate baddies arrive at the Temple of Zuul at the centre of the screen. If you have enough dollars you can take part in the final conflict, perhaps win the game, and gain access to a secret pass number which will give you access to any other **Ghostbusters** game in the universe.

The game is not much to shout about but cannot be damned just because it emulates the plot of a film and contains nothing new. One of the more interesting features of the game is the soundtrack, coupled with a nifty voice synthesiser which insists on shouting 'Ghostbusters' and 'Behind you' in a passable imitation of Ray Parker Junior's strangled wheeze.

Arrow of Death (1 & 2)

THE TWO parts of **Arrow of Death**, each sold separately, form the sequel to the tale of the **Golden Baton**. This magic object, which once brought luck to the heroic world it presides over, has now become tainted by the evil of the sorcerer Xerdon. Crops wither, the land is sick, the people murmur.

In Part One you must gird your loins and head up country to seek out the pieces of an arrow — the only weapon which will destroy the magi-

cian provided it is made of the correct materials. You begin your journey in the deserted palace where the baton throbs with malevolence and despair.

The second program is a game in its own right and needs no data from the first. In this part you have found the pieces and must now take them to the only fletcher who can make the Arrow in the correct, magical, way. He has unfortunately already been captured by the agents of the evil one, so don't expect it to be easy.

The games have similar styles and feature graphics for many locations. You can switch between the text description and the picture by using the ENTER key — though the in-

structions don't tell you that, which may confuse the unwary.

Se-Kaa of Assiah

EVIL rules the land — yawn — and only a hero can bring home the bacon by finding the Three Great Artifacts of Power and returning them to their rightful owners. In **Se-kaa of Assiah** you become the hero of the title — geddit? — and begin your quest in a village close to the dread castle of the Dark Ones. Enter at your peril and brave the forces of darkness.

The program is a two-part game which purports to be a text adventure with graphics. After a short foray into the fortress you will soon realise that

there is precious little description or supporting text beyond your own input. The inevitable result is a featureless and empty world which fails to grasp the imagination successfully. The graphics are interesting but do not add enough to the very slim story line to hold your attention for very long.

In some ways the game might have been more likely to succeed if the

programmers had decided to make it into either a graphic monster maze type game or a pure text adventure. The concentration on slick pictures has clearly reduced the power of the interpreter and the space available for words.

Although the program is cheap adventurers still have the right to expect more than this for their money.

Microfitness

A DANCE and health studio based in Walsall has come up with a get-fit program aimed at computer sloths. **Microfitness** is geared to get your corpuscles moving, the program first gives you a few simple exercises to perform and then tells you how unfit you are.

Before the program can gauge your fitness level it asks you a series of detailed questions about your body's dimensions including how much extra fat you are carrying and your resting heart rate.

You then start to get physical and are given a series of simple exercise to perform. The data from these helps the computer to predict accurately your anaerobic power, muscle power and flexibility, amongst others.

A detailed booklet comes with the package giving diagrams and explana-

tions on each exercise. To relieve the tedium of the computer screen, a line drawing of a man performing each exercise shows how it should be done. Should you find certain exercises difficult you are told in no uncertain terms to consult your doctor before continuing with the assessment.

Once your physical state has been decided, you can choose from among 54 sporting activities, those on which to base your training schedule. Those include running, jogging, windsurfing, skiing and also less strenuous sports like golf and snooker. It is difficult to imagine anyone getting fit playing snooker — unless that is, they keep well away from the beer. Having chosen your sports, you are given a strict training program designed to push you, with points being awarded at the end of each session according to how well you have done.

Microfitness has been well

Oil Strike

OIL STRIKE is a strategy game for eight to fourteen year-olds based on the oil industry search for new resources.

The action takes place on a screen grid and the object of the game is to search likely squares for supplies of oil. A player can choose to survey a square which will show the geological strata beneath and, if the survey is favourable, drilling can take place.

Drilling is not always successful as a survey may show conditions likely to produce oil, whereas in fact water is

the end result. On the first two concessions squares are numbered as to their potential for oil bearing, but after that players have only the strata to guide them.

Once found the oil gushes and a production level can be set. As the months pass messages scroll up on the screen, such as 'Oil price drops', and it will be time for the budding oil magnate to reduce production.

Other messages include money spent on cleaning up the environment after an oil spill or a well has dried up. Scoring is in the form of a bank balance and a monthly totalling of

income and expenditure.

Oil Strike is a valuable introduction to the interactive forces of the world commodities market and the language of the business world, as well as an exploration of geological maps. Its appeal lies in the strategic decision making which has to be revised continuously as world market conditions change, a heinously difficult task.

Airwolf

BUY the rights to a well-known TV series. Find an old game knocking around which bears a passing resemblance to the scenario. Hey presto! another spin-off is born.

In **Airwolf** you are the pilot of the eponymous helicopter which you fly through a series of scrolled scenes.

Two-thirds of the screen contains scrubs and mountains and the middle third, through which **Airwolf** travels, looks like a long black tunnel.

The inlay card informs you that **Airwolf** must rescue five scientists, who are being held in a base somewhere beneath the Arizona desert. You are not told why or by whom.

Viewers of the television series will already be familiar with **Airwolf**. The plot rotates around a slick and sophisticated helicopter which fights the baddies.

Sadly though, the arcade game is a poor substitute. The graphics are dull and the tasks uninspired. The first obstacle, a wall, appears as **Airwolf** shoots through the 'tunnel'. While busy destroying the wall with full firing power it starts rebuilding itself.

If you succeed in demolishing that wall the next obstacle which comes into view is — yes, you guessed — a very familiar looking wall. Very imaginative.

Although there is the option for keyboard or joystick control the latter is well advised as all five keys would require simultaneous operation. The game bears a resemblance to **Blue Thunder** and is produced by the same company. This sheep in **Airwolf's** clothing is best avoided.

Disease Dodgers

DISEASE DODGERS is one of those programs which are much more fun than the program notes suggest. We are told that the game will show how health, diet and exercise are inter-related. It is based on this quite complex idea. You have to move the Dodger family over a series of jumps, eating food and drinking as you go along. The terrain varies and gets more awkward depending on which re-

gion of the world you are in.

The family consists of Dad, Mum, Gran, teenager and toddler. Invariably Dad has the best chance of survival, a dubious position to hold. As the dodger moves about the terrain he or she has to jump over obstacles and, if no food is eaten, gets progressively weaker. All the time various coloured blobs representing diseases attack your dodger.

The aim of the game is to build up immunity by eating the healthy foods on offer. Weight, immunity levels and survival scores are shown at the top of the screen.

Unusually for an educational game this has true arcade action. The dodgers have to take running jumps over the walls and not simply hop over

them, which all adds to the motivation factor. The big problem with the game is with the graphics. Some of the foods are difficult to distinguish; for instance was that purple shape a dyed egg or an aubergine?

Despite the colour problems **Disease Dodgers** is fun to play and demonstrates the relationships stated if only on an elementary level. Certainly it is to be recommended as an alternative to the average arcade game for children between eight and 12.

The Great Space Race

In space nobody can hear you scream which is just as well if you intend buying **The Great Space Race**. It is one of the most vacuous products we have seen and its time that this sci-fi 'epic' was exposed as yet another dose of Legend super-hype.

The loose plot involves a race between space ships, some piloted by user-controlled characters and others by the computer, to deliver consignments of an alcoholic beverage called Natof to as many planets as possible. During the delivery runs characters may indulge in ship-to-ship laser gun butchery or lift the lid on the cargo and arrive at the next port of call in a drunken haze.

At seemingly random times during the game one of the characters may discover the code number of a booby trap bomb which has been hidden on a planet or ship. If you have time to scribble the number and location down before the information is scrol-

led off the screen you can defuse the bomb in the unlikely event of arriving at the location.

If the game Loads without crashing back into Basic you will immediately see the most attractive aspect of the package. The graphics in which the characters are displayed are in brilliant high resolution which is produced on the screen with the utmost professionalism.

It is, however, a pity that the programmers at Legend do not seem to be able to produce a good animated representation of a space battle. The two ships on the screen look like two mis-shaped fried eggs sliding around in a pan. Legend has taken minimal graphics to new heights.

As for playability, if you want to make a cup of tea or 'phone a distant relative in Australia you can leave the game to play with itself. As with soaps such as *Coronation Street* or *The Archers* you can go away and come back without having missed much.

It is incredible that the company which produced **Valhalla** with interac-

tive characters and real-time action, difficult to program by any standards, could produce such a whimper after the bang. **The Great Space Race** includes real-time action but if intelli-

gent character interaction does exist within the game it must be hiding somewhere. As for the Natof, the game plays as if it was written under the influence of the stuff. John Gilbert

Grand Prix Manager

GRAND PRIX MANAGER heralds the return of the Toms, following a long silence after the incredibly successful **Football Manager**. Not that author Kevin Toms has written the sequel, **Grand Prix Manager**, but the game has been published by his company and is firmly based on the blend of menu-based decisions and highlights of the action which made the

previous game a Spectrum classic.

Unfortunately, the simulation of life as manager of a Formula One team is far less impressive.

You must choose a driver from a short list while keeping in close contact with the sponsors. Decisions regarding the race depend on the percentage of straights and bends, weather conditions and temperature. You can decide on your tyres, their hardness and tread depth, and set the elevation of the car's spoiler.

Then you sit back and watch user-

defined graphics stay motionless in the centre of the screen while other user-defined graphics whizz past them.

Written in Basic with occasional POKES of the crazy border variety, it is a dud effort if ever there was one.

Danger Mouse

DANGER MOUSE is back, fighting fit and once again ready to pit his wits against the mad Baron Silas Greenback in the Black Forest Gateau. Whoops! Chateau.

Colonel K, head of a department so secret that even he does not know its name, has sent his right-hand mouse with trusted assistant Penfold to the Black Forest to destroy the Baron's secret weapon — a Pi-beam, which poses a threat to world security. 'It should be a piece of cake', mutters Danger Mouse as they leave for Ger-

many in the mousemobile.

Many strange adventures follow in the quest for the Pi-Beam, more than once the intrepid pair find themselves in the soup as time after time they fall into the fiendish traps set by the mad Baron.

Their immediate problem is finding a way into the chateau, preferably in one piece, and with a little ingenuity and lots of luck they start to make headway.

Danger Mouse in the Black Forest Chateau is an adventure game played in a multiple choice format with a number of options to choose from at every move. Your success is dependent upon learning the area and picking up the right objects and you might find it helpful to draw a map of your progress.

Nearly all the objects have some uses although you might find a few red herrings. Penfold plays his part and

lets fall cryptic clues at almost every opportunity. Pay close attention to the dialogue — there is nearly always something there to help you.

The game is played in two parts, and you will have to solve the first half to gain the skeleton's secret bone number — this is a code allowing you to load part two.

Charming illustrations accompany each location. The game is fast moving with no long delays before arrival at new locations and the adventure is easy to solve. The simplicity of the game makes it ideal for young adventurers and an enjoyable break for those seasoned adventurers not wishing to expend much brain power.

Heathrow International ATC

PROBABLY the most disturbing simulation ever written has been re-released in a new improved form by Hewson Consultants. **Heathrow International Air Traffic Control** is guaranteed to dispel any idea you might have had that airports are safe places to be in.

The original program was a classic of simulation, and with the addition of Concorde flights, and a completely different version for Schiphol airport

in Holland thrown in on the B side of the cassette, the new product is even more impressive.

The screen displays a radar map of the area around the airport. Aeroplanes enter the screen at any one of four stacks, points where pilots are instructed to circle until the controller brings them in to land.

It sounds easy, but it is not. The idea is to get everything moving in an orderly flow, but you only have to make one mistake to start a chain reaction leaving bits of broken aircraft strewn all over West London or the Zuider Zee. Although the program is slow, being conducted in real time, and tests you over half an hour of

activity, once something starts to happen you will find it very difficult to work out the instructions for each individual aircraft quickly enough.

Although it is not the sort of thing to drive everybody wild with excitement, for those who like beating their brains into a pulp on wet weekends watching Concorde carving up the rear end of a DC10, Heathrow ATC is what they have been looking for.

The Magic Sword

THE WORLD of fairy tale is married with text adventure in **The Magic Sword**, a bookware package with a format calculated to appeal to the six to eight year-old child.

The story pits Princess Poppy and Prince Fred against Bad Bertha the wicked witch and is attractively illustrated without being desperately original in content. The tale ends with the imprisonment of the princess by Bertha. At that point you load up your program and take on the part of Fred in his quest for the sword. Naturally, he must rescue pretty Poppy from her ordeal.

The adventure uses bright, blocky

graphics and enlarged text to help the young reader. Movement and a few basic actions are carried out by single key presses. A compass flashes out the directions in which it is possible to move — a useful and sensible idea given that children of this age will have little concept of cardinal points. It is the kind of game which will probably be best played with an adult to help, at least at the beginning.

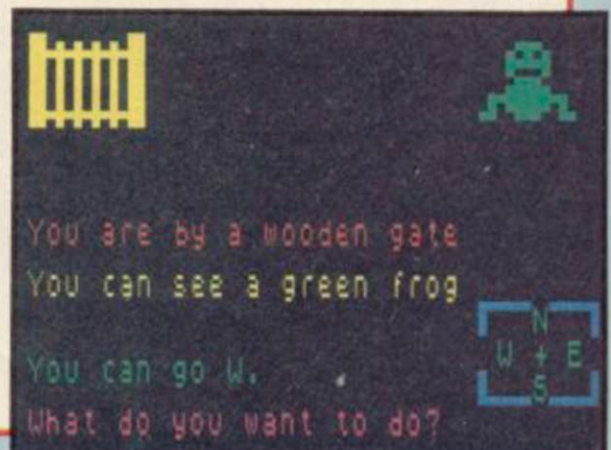

Although the package is well produced the press blurb suggests that the game is suitable for toddlers. This is definitely not the case as the reading and reasoning skills required are well beyond tinies. More sophisticated juniors might also find the story a little old hat.

Nevertheless, this is a creditable

attempt to reach an age group who are rarely catered for in games computing.

NOW
PROGRAMMING

YOUR HOME
COMPUTER

IS AS EASY

AS READING
THIS.

Let's face it, most 'beginner's guides' are anything but easy reading.

Now Dorling Kindersley have come up with a new way of learning BASIC that's unique, simple and down-to-earth.

It's called 'Screen Shot.'

Unlike ordinary guides, Screen Shot uses full-colour photographs of real computer screens to show instructions, program listings and displays.

So what you see on the screen in the book is precisely what you'll see on your own computer screen.

Which makes our programs easy to understand, easy to read and free from misprints or other sources of confusion.

The accompanying explanations are clear, practical and are written by experts.

You'll find there are Screen Shots for most popular makes of home micro.

Books 1 and 2 of each series form a complete guide to BASIC programming for that computer.

For the more adventurous programmer, Books 3 and 4 explore the creative world of computer graphics.

In the words of a reviewer in 'Big K' magazine, Screen Shots are "...clearly and expertly written with the best layout I have seen in a book of this sort... what you see is (for once) what you get. Outstandingly good and for beginners or semi-beginners: highly recommended."

The message is clear. If you really want to get into programming, get a Screen Shot.

With anything else, you won't be fully in the picture.

Screen Shot
PROGRAMMING SERIES

Screen Shot books available from larger branches of BOOTS, MENZIES, WH SMITH and other leading bookshops and computer stores. In case of difficulty, write to: Dorling Kindersley, 1-2 Henrietta Street, London WC2E 8PS.

Screen Shot Books 1 and 2 available for Sinclair ZX Spectrum, Sinclair ZX Spectrum+, Acorn Electron, BBC Micro, Commodore 64, Apple IIe. Books 3 and 4 available from April 1985.

Dorling Kindersley Publishers Limited.

THE AGE OF THE R.A.T

CONVENTIONAL JOYSTICKS ARE DEAD!

The Cheetah Remote Action Transmitter is the most sophisticated computer controller available.

It has these features:

- Infra Red transmission – so there are no leads trailing across the living room. Just sit back in your chair up to 30 feet from your machine.
- Touch control – no moving parts, extremely fast, long life.
- No extra software required.
- Can be used with all Cheetah RAT/Kempston compatible software.
- Fits comfortably in your hand for long play periods.
- Comes complete with receiver/interface unit which simply plugs into the rear of your Spectrum.
- Compatible with all Sinclair/Cheetah peripherals via the rear edge connector.

Simply incredible at £29.95 including VAT and p & p.

Dealer enquiries welcome. Export orders at no extra cost.

Explore the world of Sinclair

Sinclair User, the monthly magazine, will ensure that all ZX81, Spectrum and QL users get the most from their computers.

Every month we include exciting games programs, reviews on the latest software, bench tests on hardware and peripherals, as well as technical advice and development news on Sinclair products.

Sinclair User interviews key people within Sinclair Research, authors of top selling games plus regular features on the developments in the fast moving computer industry.

We cover all aspects of Sinclair, for beginners to enthusiasts right through to business users — Sinclair User will keep you informed. So, don't miss out — place an order with your newsagent or complete and return the coupon below and we will ensure that your personal monthly issue is sent to you direct.

Please send me SINCLAIR USER each month for the next twelve months. I enclose a cheque/PO to the value of £13.20 (UK rate including p&p). For overseas rate please contact Subscriptions Department.

A NEW, IMPROVED ZX81 KEYBOARD AT THE SAME OLD PRICE. £9.95.

There's only one thing wrong with the ZX81. Its keyboard.

Or rather its lack of one.

Since it's flat your fingers don't feel as if there's any response to the pressure put on the keys.

ZX81 KEYS

FILESIXTY KEYS

In other words, you're not quite sure which keys you've pressed until the screen actually tells you.

Our new, improved push button keyboard changes all that.

It matches the ZX81 perfectly. And the keys give a real calculator-type feel.

To set it up all you have to do is peel off the adhesive backing and stick it on top of the ZX81 touchpad.

Because no tampering or soldering is involved the guarantee is not affected. And it will last for up to 3½ million operations.

But our keyboard doesn't just come loaded with features. With it comes a separate overlay and a set of coloured stick-on labels to make game playing easier.

It's yours for the original price of £9.95.

Whichever way you look at it, we think you'll agree that it's a keyboard that's quite outstanding.

Orders to Filesixty Ltd., FREEPOST, London W9 2BR.

Hearing aids the volume

READERS may be interested to hear of a way of amplifying the sound from a Spectrum inexpensively.

Connect a television ear-plug, or 'Walkman' ear-phones, to the EAR socket of the computer, and this will amplify the sound when you wear the appliance. Although you cannot alter the volume — and ear-phones are louder than an earplug — it is far cheaper than any peripheral device for amplifying.

I am sure that this idea is not new, but I have never seen it in print before.

David Gilchrist,
Basingstoke.

Updated is outdated

I SENT my 16K ZX Spectrum away for an update and when it returned B,N,M, and Symbol Shift were no longer functioning properly.

Michael Doherty,
Uxbridge, Middlesex

● It seems that the company which carried out the upgrade has damaged the ribbon cable. If you do not trust them to fix it try TV Services of Cambridge, Chesterton Mill, French's Road, Cambridge CB4 3NP. Tel 0223 311371. They can supply a new one at a reasonable price.

ROMs around the world

YOUR REPLY to Daniel Morgan — Sinclair Surgery, December 1984 — regarding the Universal Modem Adaptor for the ZX-81 has brought us numerous en-

quiries regarding this adaptor. We have replied individually to those who enclosed a stamp but for the benefit of your other readers may we explain that although Comprosys Ltd developed the copyright ROM for the UMA we did not produce the adaptor itself and ceased supplying our copyright ROM to the hardware manufacturer in May 1984.

However we do continue to produce and supply direct to customers worldwide our own ZX Aszmic ROM and Aszmic External Card for the ZX-80/ZX-81 and our SP ROM.

I hope this may clear up any misunderstanding.

Donald F Johnson,
Comprosys Ltd,
29 Campden Road,
South Croydon,
Surrey CR2 7ER.

Brother runs as printer

WILL the Spectrum, through an appropriate RS232 interface drive a Brother EP22 electronic typewriter printer?

Richard Wall,
Pirbright, Surrey.

IN the July 1984 issue of *Sinclair User* it was stated that the Brother EP44 was not suitable as a computer printer.

I see that the Argos chain is offering the Brother EP22 dot matrix print typewriter at £145.00. It is described as follows: "Built-in interface for use as printer for micro-computers with these specifications: RS232C, 75 or 300 Baud, 8 bit no parity, DTR Hand Shake."

I have a Spectrum 48K

with Interface One and microdrive. Could you please tell me if this printer would be suitable for use with this micro?

R A Russell,
Orpington, Kent.

● We have received a number of enquiries regarding the Brother EP22 and EP44. Both can be used with the Spectrum although the EP44 in particular is rather slow. If you have an Interface One then use the standard Sinclair cable to connect the two together. To print something consult Chapter 8 of the microdrive manual. For listings enter:

OPEN #3;"t":LLIST
or for simple printing:
OPEN #3;"t":LPRINT
"This should work".

Monitoring a connection

IS there any way of connecting a monitor to an Issue One Spectrum?

Peter Copping,
Manchester.

● If you want to use only a composite monitor then it is easy. On Issue One and Two the video signal is not taken through to the edge connector. All you must do is find the word VID printed in white on the circuit board above two solder points. If you join those, the circuit is complete.

To use an RGB monitor you will need an adaptor. The only company which makes a separate one for the Spectrum is Adapt Electronics, 20 Starling Close, Buckhurst Hill, Essex IG9 5TN. Microvitec PLC, Futures Way, Bolling Road, Bradford BD4 7TU, sell a monitor which includes an adaptor. To use either you will need to make connections inside the Spectrum and they can advise you.

Receiving the Oracle

IS there any hardware which will enable my Spectrum to receive Ceefax and Oracle?

Also, is it possible to put the computer in and out of graphics mode during a program?

Finally, can I connect a DK'tronics 56-way ribbon connector to a Currah μ slot?

Jan Heath,
Bristol, Avon

● To answer your points in turn: 1 — the TTX 2000 from OEL, North Point, Gilwilly Industrial Estate, Penrith, Cumbria CA11 9BN, priced £143.75; 2 — use POKE 23617,2 for graphics mode; POKE 23617,1 for extended mode; POKE 23617,0 for the normal L cursor (that is best seen if you follow the POKE by an INPUT statement); 3 — yes.

Colourless keyboards

I RECENTLY acquired a Spectrum and I am not happy with the keyboard. Not just because of its sloppiness, but because I am colour deficient, which means that the colours red and green present a problem. I wonder if you could suggest an alternative keyboard.

G F Jones
London SW3.

● There are as far as we know, no keyboards that use different contrasting colours. The best we can suggest is that you have a look at the 68FX1 from Fox Electronics which uses only red and black or the Fuller Executive which only uses white — as does the Spectrum Plus.

software that's hard to beat...

SPECTRUM

TASWORD TWO

The Word Processor *

"If you have been looking for a word processor, then look no further."

CRASH June 1984

"The number of on-screen prompts, together with the excellent manual, make it ideal - even for an absolute beginner."

PERSONAL COMPUTER WORLD
September 1983

"Without doubt, the best utility I have reviewed for the Spectrum."

HOME COMPUTING WEEKLY
April 1984

Your Spectrum becomes a professional standard word processor with TASWORD TWO. Sixty-four characters per line on the screen is just one of the many features of this versatile program. The cassette also contains TASWORD TWO TUTOR. This teaches you word processing using TASWORD TWO. Whether you have serious applications or simply want to learn about word processing, TASWORD TWO and TASWORD TWO TUTOR make it easy and enjoyable. TASWORD TWO is readily adapted for the microdrives to give super-fast saving and loading of both program and text.

PRICE £13.90

TASCOPY

The Screen Copier

Screen copy software for ZX Interface 1. Print high resolution screen copies (in a choice of two sizes), and also large "shaded" copies with different dot densities for the various screen colours. Tascopy supports all eight pin dot matrix printers with Epson type control

codes. e.g. Epson RX-80 and FX-80, Shinwa CP-80, Mannesmann Tally MT-80, Star DMP 510/515, Brother HR5.

PRICE £9.90

TASMERGE

The Mail Merger

Transfer data from MASTERFILE to TASWORD TWO! Letters and forms typed on TASWORD can be printed with addresses and data taken from MASTERFILE. The mail merge facility allows, for example, multiple copies of a letter to be printed, each containing a different name and address taken from your MASTERFILE data. To use TASMERGE you must have one or more microdrives as well as TASWORD and MASTERFILE by Campbell Systems. (version 9 or later).

PRICE £10.90

TASPRINT

The Style Writer

A must for dot-matrix printer owners! Print your program output and listings in a choice of five impressive print styles. TASPRT utilises the graphics capabilities of dot-matrix printers to form, with a double pass of the printhead, output in a range of five fonts varying from the futuristic DATA-RUN to the hand-writing style of PALACE SCRIPT. TASPRT drives all dot-matrix printers with bit image graphics capabilities and can be used to

print TASWORD TWO text files. TASPRT gives your output originality and style!

PRICE £9.90

TASWIDE

The Screen Stretcher

With this machine code utility you can write your own Basic programs that will, with normal PRINT statements, print onto the screen in the compact lettering used by TASWORD TWO. With TASWIDE you can double the information shown on the screen!

PRICE £5.50

TASMAN PRINTER INTERFACE

Plug into your Spectrum and drive any printer fitted with the Centronics standard parallel interface. Supplied complete with ribbon cable and driving software. The user changeable interface software makes it easy to send control codes to your printer using the method so successfully pioneered with TASWORD TWO. The cassette also contains fast machine code high resolution full width SCREEN COPY SOFTWARE for Epson, Mannesmann Tally, Seikosha, Shinwa, Star, and Tandy Colour Graphic (in colour!) printers. Compatible with microdrives and ZX Interface 1.

PRICE £39.90

Wizz for Skooldaze!

WHEN YOU write a computer game it always go wrong becos of THE BUGS as any fule kno. Peason who is my grate frend wrote an uterly wet game in prep. but Mr Reidy make up games for MICROSPHERE and his are all grate fun with v. good graffics.

I decided to write about Mr Reidy for a projekt and espechally about SKOOLDAZE. It is a wizz game about skool you hav to hit the skool shields with gats and also the masters it is fantastic. In the game the head-master has a BAD REPORT in his study and you must get it back. Evidently Mr Reidy hav not heard of the Molesworth Bogus Report system for good marks.

Here is the projekt.

Mr Reidy

Mr Reidy live in a house his name is David but he is 32 yrs. He hav a wife called Helen. She is a teacher chiz chiz but she only teach tiny boys and gurls. Mr Reidy write the programs and Mrs Reidy she does the adverts and things in the offis.

Before he write games strange to relate Mr Reidy work with big computers price £1000000002 they are called MAINFRAMES. He sa, "I was a production systems manager working with on-line dataframe — all the buzzword stuff."

All profeshunal programers talk like this e.g. on-line dataframe which mean everybode on the same machine at once don't pull the ribbon cable peason CRASH and yet again the skool BBC xplodes and no more math. today cheers cheers.

Mr Reidy did not go to skool like us mere mortals but to UNIVERSITY insted. He learn about NEUROPHYSIOLOGY and ZOOLOGY. "Now you are going to ask me why someone like me is writing computer programs. In fact nerves are all about communication. From a practical viewpoint knowing the mathematics of information theory did help with computers, and I have an active interest in certain aspects of artificial intelligence, mainly graphical. I am not

Chirs Bourne unWisely allows a grate frend to investigate Microsphere.

talking about the Spectrum but big mainframes, the sort of stuff where you give it nine points and it draws a landscape."

That is quite enuff about that.

How to start a company

Mr Reidy start his own company at the end of 1982. He write for the ZX-81 but it is all weedy bizness programs. For the Spektrum he write OMNICALC it is a spreadsheet. Grabber hav it, it add up numbers and does all his homework. Grabber is head boy and a big buly.

"I was marketing software under the Microsphere name but also doing a lot of contract work. Optimax, a linear programming thing was sold by Hilderbay," sa Mr Reidy.

"Then we were begining to get games out. There was the Train Game and Wheelie. Wheelie broke very slowly, but it has been selling steadily now for over twelve months, which is remarkable."

Microsphere is a small company but Mr Reidy work with another man, Mr Warrington, his name is Keith. He does the GRAFFICS for the games becos he is an artist. All artists are suposed to be weedy unless they are French and kno about life and gurls hem-hem. But Mr Warrington is not bad, to judge from Skooldaze.

Skooldaze

"The only reason for doing Skooldaze was I wanted to see lists of all the dates of battles in English History appearing in the hint pages of magazines," sa Mr Reidy.

He sa this because in the game you must find when Mr Creak was born to open the safe with the dreaded report in it. He is the History teacher and v. old and he gives clues to do with battles.

I hav doubts about this, dates are better left in books where they belong. It is more fun firing the catapults at the masters insted. Mr Reidy do not mind this when I tell him.

"A game should not depend on the desire to achieve a single aim. If it is a simple maze there should be distractions along the

way. In *Skoldaze* you don't have to know what to do to enjoy it."

Mrs Reidy sa a boy rang up to ask how to write on the blackboards, which any fule kno. "I told him how to do it and then I went into the teacher bit and told him he shouldn't be writing on blackboards anyway."

Everybody in the game are just like in my skool. "It was designed for school stereotypes," sa Mr Reidy. "Every school has a swot, and a bully. Every school has one angelic looking little boy who is a real terror — Boy Wander in the game. And there is always someone who you wish you were as nasty as, but always gets away with it."

"Then there are the masters. The science master is always a mad boffin. Every school has one trendy master — Mr Withit the Geography master. You can put your own

FLETE ST.: "How do you do the graffics etc.?"

MR REIDY (*amazed by sagacity of question*): "I need a strong visual sense right at the beginning even if it does not coincide with that of the graphics artist. Keith Warrington will discuss it with me and do some roughs, so I know what sort of animation is required."

Mr Warrington kno all about colours and how they look next to each other, and also about what you do not see in the picture, i.e. if you look at a picture you do not notice everything there, and Mr Warrington kno xactly what you are not looking at. Mr Reidy think this is v. important.

Some companies write wizz games about killing things with germ guns and the PUKON but Microsphere do not write those games. Mrs Reidy sa "I'm not thrilled by violent games. We don't kill persons. Our games are usually to try and save yourself from something or other."

The state
of the
NATION

names in, which is very important. It makes the game more social, like a family occasion."

Aktually you do not want to involve your family in *Skoldaze* it is sordid enuff as it is without pater getting cross about your high score and becos sombode has drunk all his best gin hem-hem.

How to be Topp
at Games

"It takes four or five months to get an idea together for a game," sa Mr Reidy. "You say, 'I'm going to write a game about a school' and then several months later you can get on with it. You have to structure it properly to being with."

Mr Reidy hav a grate brane e.g. he can write MACHINE CODE straight down on paper, he does not even use an assembler sometimes.

LORD MOLESWORTH OF

All programers like to sa wot they think about the SOFTWARE INDUSTRY. It is becos they want to be reassured about working in it. Grabber sa the softwear industry is in trouble becos his dad has 700000 shops selling games and cannot afford to give him more pocket money but Mr Reidy sa it is not true.

"We are not feeling a squeeze at all at the moment but it does seem to have got into a seasonal market. That creates cash-flow problems and nobody likes it. In general there will probably be a shakeout this year."

What he means is when you shake a bottle of ginger beer it xplodes because the mollicules get excited. So we can ekspect to hear a lot of banging all over England in 1985.

"It was all little people at first," sa Mrs Reidy. "And now the big ones seem to be moving in." Mr Reidy agrees. "Quicksilva and Ocean were small once" sa he. "But the bigger things get, the more hype there is and there are less authentic original games. For us it is very healthy because we have a very successful game. If we were setting up at this stage I wouldn't bother.

continued on page 52

Hit Squad

continued from page 51

"The usual silly things happened at Christmas. We had to push quite hard to get into Smiths and Boots. They are not dependent on your game, and they also sell to a slightly different market to specialist shops. A lot of it is caused by hyping products to the eyeballs. They ask 'What backup do you have?' and if you have a massive advertising campaign they say 'OK, we'll take it'".

Well that is life and no more than you ekspect. If you think it is all a bed of roses just ask Mr Grabber he will tell yu a different story hem-hem.

ALL WORK AND NO PLAY etc

All programers do wierd things when they are not programing which they do nearly all the time as far as i can see.

Mr Reidy runs up and down all the rodes in N. London v. slowly, it is called jogging and worse even than GYM which make the body beatiful as if anyone could, look at peason his is beyond redemption.

He also pla the guitar, he pla the blues and Mrs Reidy pla classical tunes. He like to pla games but only those which exercise his grate brane

A Look into the Future

Mr Reidy sa he will go on writing games. He hav two he is thinking about already. Mrs Reidy made up the name of one she sa it is a pun and so bad she will not tell me chiz chiz.

Also Mr Reidy is going to do some conversions, it is like in Div. not as exciting as you think. "I want to get into the Commodore market. The problem with conversions is they are often done by people who do not like the game and do not understand it." He sa *Skooldaze* may be one so all the oiks with Commode 64s will hav it.

THE END

That is my projekt about Mr Reidy and Microsphere. Peason help with the title graffics, that is why they are all wet and weedy and uterly pathetic.

e.g. Chess and Go and intelektual card games.

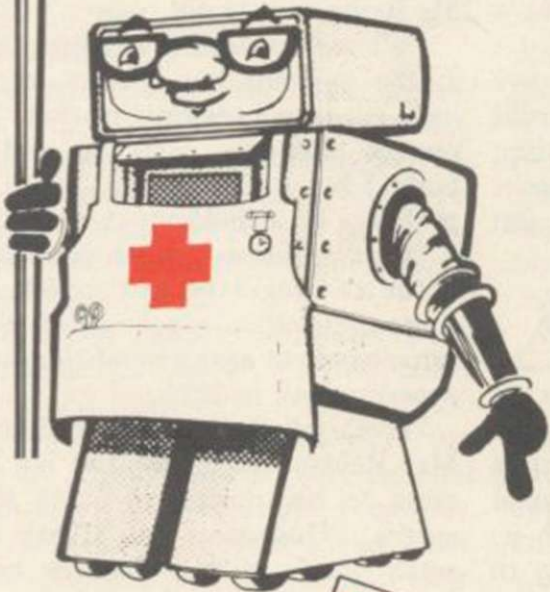

He read science fiction books. "I love the cheap stuff, like E E Doc Smith, but also Vonnegut and Van Vogt. I like *Dune* but I've heard the film's terrible."

Mrs Reidy sa he is a bit of an old hippy but he sa it is not true.

Papert's prophecy

SEYMOUR Papert, the father of the Logo language, has arguably done more for computers in education with his book *Mind Storms* than anyone else.

His ideas about the lifting of restrictions and enjoyment of learning within the classroom form the basis of the book which describes the conception and use of MIT Logo within educational environments around the world.

The basic premise, which he supports vehemently, is that children learn more by discovery rather than by rote. Give a child the choice between a multiplication table and a computer running Logo and the child is more likely to take the latter. Papert also asserts that the child will learn more and in *Mind Storms* he makes a good job of proving it.

Papert's arguments make sense not least because he is

more literate than many of his colleagues in education. As he explains his proposals he sets up questions between the lines which critical readers are likely to ask and then with great modesty knocks those critics down with practical solutions to the problems.

In the introduction critics are at first likely to attack him for his apparent lack of concern for the teacher/pupil ratio. Many will say

that his ideas seem to point to an educational system where the lack of resources and trained staff can be corrected through the use of computers.

Papert sets up the critics and then says: "My goal is not educational economies: It is not to use computation to shave a year off the time a child spends in an otherwise unchanged school or to push an extra child into an elementary school classroom . . . I believe that certain uses of very powerful computational technology and computational ideas can provide children with new possibilities of learning, thinking and growing emotionally as well as cognitively."

Papert is obviously a utopian but this book shows that he is willing to adapt, just as his language is adaptable. His book is a worthwhile read for everyone who is disenchanted with the computer scene.

John Gilbert

Simple QL games master

AS PREDICTED, the flow of QL games listings books has started and, ever to the fore, Granada, now Collins, Publishing and its seemingly resident authors Kay Ewbank, Mike James and S M Gee have released *QL Gamesmaster*.

The book is not to be confused with other titles in the Gamesmaster series. *QL Gamesmaster* has been written from scratch and provides some original and entertaining listings to enter for those who have nothing better to do with their time or £400 worth of Quantum Leap.

Ewbank and Co have tried to disguise the nature of the book by including an introduction which, in general, repeats the advice of author Roy Atherton in the *Beginner's Guide* which is packaged with the machine. Once they have got over that hurdle they sprint into a series of "simple but effective" program listings.

Admittedly, the programs are simple but the explanations do reveal new information about games design on the QL. That is not surprising as almost nothing has been written about the QL and its game-playing abilities. Programs include *Ant*

Hill, *Leap Frog*, *Frogling* and *Tadpole*. You can probably take an intelligent guess as to what they look like and how they all play.

If you are interested in demeaning the abilities of your expensive new computer then buy *QL Gamesmaster*.

Putting theory into practice

THE immediate impression upon opening *Software Projects for the Spectrum* is "oh no, not another book about structured programming".

You may feel by now you have grasped everything that there is to know about the subject, but few books ever show how to put that knowledge to good use. *Software Projects* is, thankfully, different.

Despite the usual introduction where the author, Rudolf Smit, tries to show what an artist he is with words — describing software writing in terms of analogies and similes — the book gets off to a promising start with a blow-by-blow account of the projects to be

attempted within the following chapters.

The programs include a birthday and anniversary calendar, a word guessing game and three-die roller. A motley crew, and not the most inspiring of topics, but we must not grumble as the book is, after all, for the beginner who has just received a Spectrum.

Each chapter contains a series of sections illustrating the program which is to be built and reproducing the subroutines which make up its main structure. The author is not content to give only lists of programs.

For instance, in the chapter on calendars Smit talks about the construction of

dummy statements in the computer which are then replaced with real program code when the programmer knows how the code should be written.

Although *Software Projects* succeeds in its aim of introducing new users to the practice, rather than the theory, of programming techniques it has to be asked whether the book provides too much help. The author may not give the full listings of projects but the descriptions of the programs leave little to the imagination.

THE WINNERS!

ADVENTURE, STRATEGY, SIMULATION OR WAR GAME ?

Whatever your choice the 1984 Cambridge Award competition has the game for you.

THE PRINCE, an adventure game, won the Cambridge Award and is an entirely new concept in adventure games, creating a believable world of medieval intrigue and counter-intrigue in which the four players become totally immersed. The game is very interactive and each player represents a particular 'power base' within the castle. The players need to make alliances with each other before the mystery is solved and become the new Lore-Master. Untrustworthy henchmen are recruited to spy or steal from other players, plots are hatched and unholy alliances formed. **Price £7.95**

1942 MISSION is an adventure where a British Agent is sent to find the rocket fuel plans in a German High Security camp. **Price £5.95**

BLUE RIBAND is a simulation where the Master of a modern ferry has to navigate his way through the narrow river channels of five South Sea islands. **Price £5.95**

INSURGENCY is a strategy war game which is unique in that the 2 players have very different types of armies. The government forces are better equipped but are less mobile than the guerrilla forces. **Price £5.95**

WAR ZONE is a war game where the player plays against the computer's Red Forces. There are 9 zones and up to 150 pieces on each side. Stunning, fast moving graphics. **Price £5.95**

The ultimate development from

The New Protocol4 interface for the ZX Spectrum brings you game control customising in a way that no other interface can. It accepts all commercially standard joysticks and is compatible with ALL Spectrum software. Operates like fixed option interfaces or can be fully hardware programmed. Infinite flexibility is achieved by the unique "CustomCard" System. CustomCards are easily programmed to suit all types of games. Protocol4 comes with 3 pre-programmed cards and allows operation with Kempston, AGF/Protek, Sinclair joystick 1 and 2 options as well as 2 programmable CustomCards and 10 Quick Reference Programming Cards. Simply clip in programmed card for immediate customised control.

Other exciting features include:

- ★ Automatic 8 direction control
- ★ Guaranteed conflict-free with other peripherals
- ★ Reset Button to clear memory between games
- ★ Fully guaranteed for 18 months
- ★ No power-down programming loss
- ★ Keyboard remains fully operative
- ★ Complete with full instructions

Also from the AGF Hardware range:

★ **Programmable Interface** — Ever popular fully hardware programmed joystick interface for ZX81 or Spectrum ... £24.95 + £1.00 p & p.

Protocol 4
Only £29.95 + £1.00 p+p
Now comes with a free CustomCard Pack worth £3.95

New Protocol K — converts your Kempston type into a fully programmable joystick interface for ALL Spectrum software! Only £17.95 + £1.00 p+p

★ **Interface II** — The best low-cost introduction to joystick control for ZX81 or Spectrum ... £9.95 + £0.50 p & p.

NEW: ★ RomSlot — Adds ROM cartridge software facility to Spectrum programmable joystick interface owners ... £9.95 + £0.50 p & p.

★ **Quickshot Joystick** — Excellent value game controller ... £7.95 + £0.50 p & p

★ **Quickshot II** — Trigger action firing button and unique Auto-Fire ... £10.50 + £0.50 p & p

★ Extra "CustomCards" (5 per pack) ... £3.95 inc p & p

★ Extra "Quick Reference Programming Cards" (10 per pack) ... £0.65 inc p & p

Lending an extra dimension to chess

Theo Wood reveals the secrets of Ann Hughes' QL graphics

QL CHESS was one of the games software high points of 1984, a year which included the state-of-the-art **Match Point**. Both games were produced by Psion. Both games featured graphics designed by Ann Hughes.

The company began in Huntsworth Mews, London — a small informal office packed to the gills with desks and people. The new base in Dorset Square is in direct contrast, an elegant Georgian house swamped with pile carpet.

Ann Hughes works here — one of a team of three graphic designers who have joined Psion over the past year. Ann is typical of many graphic designers; trained to use methods involving paper technology she is discovering that a knowledge of computer graphics is an almost indispensable skill in the commercial world.

Just before starting at Psion in October 1983 she had been working as a freelance stage designer, wielding massive brushes which could scarcely have been further from the pixel resolution required in a microworld.

She had no experience of using

computers: "I didn't know one end of a computer from another; I thought a pixel was a pistol." Her first work for Psion, designing the QL manuals and working on cassette packaging was little different from her previous training. The only problem was a lack of specialist graphic equipment to reproduce diagrams and charts. That was soon remedied.

Match Point was her first challenge in designing for the screen. "The game came to me with the dimensions of the court laid out so there wasn't very much to do in designing the game itself. Most of the work went into the design of the characters."

Ann found the limitations of screen design very frustrating in that the Spectrum screen attributes allow only two colours. When animation was introduced the problem became worse, and there was also the memory limitation to be considered. Tackling even a minor problem, like the movement of the heads in the crowd, had to be subject to an ingenious solution, "I did just two screens and narrowed the heads to make it look as if you were seeing their profiles, and then flicked them. There wasn't much else to do within the memory."

The animation of players and ball boys was done first on graph paper, colouring in the individual pixels, with eight positions for the ball boys and ten for the players. Steve Kelly — driving force behind the classic **Chequered Flag** — then wrote an animation program on a Vax computer which would remember the individual characters, send them down to the Spectrum and then run them in a sequence.

Initial results were not spectacular. "It was really funny though, as I'd not done animation before, and at first when the characters ran, they were doing some dreadful things . . . Some had peglegs," Ann laughs.

The title screen had its own particular difficulties. "This took the most blood, sweat and tears, and is what I would count as the most graphic thing. The skin tones were very diffi-

cult — I used a photograph and tried pixelating it to scale. I started with one version and then modified it. One aspect that really killed me was when he was holding the racket and I wanted the handle part to be a different colour. Then there was his hand and the background, so that was three different colours in one attribute. So I had to put it on the edge of an attribute and that meant that his arm might be too long. I had to really play around with those features."

Ann went on to design the title screens for the educational games **Estimator Racer** and **Number Painter**.

Then it was **Chess** for the QL. There was no software available at the

time, and to remedy that Steve Kelly wrote a graphics program providing the facilities that Ann required. Nick-named QDraw, the program is on microdrive and has a number of useful functions — enlarge/reduce, alter pen size, and patterning are just some. Designs can be **SAVED** on microdrive.

QDraw is obviously a powerful graphics package but QL users will have to live in hope, as what can be used as an in-house design program still requires a great deal of work before it can be introduced to the market. Psion has no immediate plans to do that.

Ann found it was with this program that pencil and paper became redundant. "When I started I was so used to

paper and pencil that I couldn't relate to the screen at all," she explains. "I did everything on graph paper, but when you draw on paper you don't get the same effect, as the light out of the screen tends to flatten everything. Now that I'm used to it I do most of my designing straight onto the screen."

One of the most useful facilities QDraw gave Ann as a designer was the ability to replicate pieces behind and on top of other pieces as well as to move them. That gave her the power to see how each piece would look behind or in front of another in various stages of play.

The problems of white pieces on white are obvious and the same goes

for black on black, but Ann found that the white/green and black/red combinations also suffered from lack of definition. A black line round the white pieces, and white round black, was used to overcome the difficulty — something she would not have done in an ordinary drawing. That technique is only used when necessary and the lines disappear otherwise.

Colours were a source of frustration: "It is totally restricting, coming from something where you have everything at your fingertips and to be told that you have to work in squares and you can't mix colours." Ann 'mixed' colours for the base of the board where she tessellated black and red to gain a similar effect.

Problems cropped up. "I started off by doing the pawn and did it much bigger because I wanted the pieces to really fill the screen. But then there was an overlap so I had to redo all the pieces I had done until then, as I started trying out the relationships."

Ann also designed the display board on the flick screen which records the moves made. That, unlike the playing board, is in 2D. But it is the 3D effects which are the most stunning, although Ann is self-deprecating: "Let's be frank. This QL gives me so much more. I don't necessarily think it's an advance because of what I have done."

Ann feels that the way forward for computer graphics will be towards higher resolution at lower cost. That means more realistic animation will be possible, and it is that aspect of computer graphics which interests her most.

She also feels that there will be a radical change in cassette packaging based, in many cases, on the 'cosmic' art of the '60s. Psion has gone through this change, exemplified in its logo which is now more abstract.

Her current work is mainly translations of various programs to other machines, and **Chess** will be translated for machines such as the IBM and Mackintosh. Ann Hughes however is not someone to rest on past glories and although already highly qualified as a graphic designer she wishes to perfect her work; she is attending a computer graphics course which will involve using programming techniques.

For would-be designers she recommends starting with a drawing package and using graph paper to work out animation sequences. And, "Be patient, that's the main thing really."

YOU ARE NOW the owner of a valuable piece of hardware — a Sinclair Spectrum. Hardware is a computer word meaning the computer itself, whereas software means programs that run on the computer.

A Spectrum may be under the protection of a year's guarantee which is reassuring but is not the same as insurance. A sensible move is to insure it, make a note of the serial number — found on the underside — and mark your name and postcode on it using an invisible marking pen.

Humidity, direct sunlight and dust are all potential hazards as are the many leads necessary to the operation of the computer. The Spectrum can get quite warm, even hot, and it is essential that the ventilation holes are not blocked up — a firm flat surface is the best place for it, not on a cushion on your knees.

A less obvious source of trouble is the plugging and unplugging of leads and the various accessories which you can buy. Apart from the cassette lead, all other leads and peripherals should only be plugged in or removed when the computer is switched off; never use force as they are vulnerable to mechanical damage which is expensive to repair.

The most popular way of storing programs is on ordinary domestic cassette tape and a very large proportion of all programs are supplied in that way. The problem is that the ordinary domestic cassette recorder is not designed for this purpose; Sinclair Research has kept the cost of the Spectrum down by making use of it along with the other necessary item — the television set.

The computer can be particularly sensitive to the cassette recorder and the setting of volume and tone controls. Once the correct levels are found then there should be no trouble. The tone control usually works best at one end of the range or the other and will be easy to set. The volume control will have a minimum setting above which all other settings ought to be correct.

Loading a program is generally easier than saving one; the cassette recorder controls may require experimentation before the correct levels are found. As there is no way of checking that a program is being saved correctly at the time Sinclair has provided a means of checking that a good copy has been made afterwards. That process is known as verifying and if it fails the cassette recorder controls should

Spectrum users get down to Basics

Our new series for beginners starts with an overall look at hardware and software. Michael Spencer is your guide

be re-adjusted and a fresh copy taken.

Mono cassette recorders are the most suitable type of tape recorder to use; stereo cassette recorders can be troublesome because there are two recording channels and unless provision can be made for recording and playing back on one channel alone it is unlikely that such a recorder will be consistently successful.

A useful feature is a tape counter, which can save time when finding previously saved programs or the space to save another. When buying such a recorder it is prudent to state that it is being bought for use with the Spectrum. If it is then found to be unsuitable it may be easier to exchange for another model.

A reduction in recording quality after many successful recordings may be due to poor quality tape or dirty recording heads in the cassette recorder. Do not be tempted to buy an expensive computer or tape recorder cleaning kit but read the manufacturers' instruction book instead. In many cases cotton buds and a little alcohol from the local chemist is a cheaper alternative. Most computer users record on short cassette tapes such as C15 and not long ones like C120. Buying very cheap tapes is false economy; buying a pack of short tapes

can be a worthwhile investment.

Televisions are as much a compromise as cassette recorders and often suffer from visual oddities. New users of home computers are very often disappointed at the picture quality and tend to blame the computer. If you are prepared to spend the money, about £300, then the most recent Spectrum models can drive some colour monitors with suitable connections. A colour monitor is not capable of picking up TV broadcasts so it is expensive for what it does, but you do get a good quality picture.

On an ordinary television set full use of tuning, brightness, colour and contrast can optimise the picture. There will be certain visual aberrations which cannot be eliminated — and a common complaint is something called dot crawl. The little dots which make up a television picture seem to be moving slightly and changing colour at the edges. There may also be small wavering lines or areas which can be equally annoying.

Devices which can be connected to a computer are known as peripherals and one useful peripheral is a printer. For any serious programming a printer is essential so that programs can be studied away from the pressures of the

continued on page 64

Spectrum + me

If you've got a 48K Spectrum™ and accounts to manage, OCP will make the job easier and faster.

All our business and utility programs are Sinclair Microdrive Compatible, and the Plus 80 versions are versatile enough to drive full size 80 Column Printers through most Centronics and RS 232 Interfaces including the ZX Interface 1. However, our standard programs (except Stock Manager) only work with ZX and Alphacom 32 Column printers.

The magic of MACHINE CODE has enabled us to produce the very latest "on the page" presentation which lets you enter and edit data naturally, as if filling in a form.

FINANCE MANAGER £8.95 PLUS 80 £19.95

Voted the best in its class by the Sinclair Users Annual, this easy to use program is a powerful and flexible aid to practically all domestic and business accounting applications. Show up to 255 separate accounts with running totals, and review standing orders as you scroll back and forth through your accounts. But that's not all, this program automatically raises a corresponding debit or credit for every entry, and will even open a new account if an entry features an unrecorded account name.

Having all your finance records so neatly stored is the height of efficiency! The program is entirely menu driven for ease of operation, yet the facilities are so extensive you'll soon wonder how you managed without it.

ADDRESS MANAGER £8.95 PLUS 80 £19.95

A very useful MACHINE CODE application program with limitless applications at work and at home.

Manage your address book with efficiency and speed! Address Manager stores up to 350 names, addresses, and phone numbers – depending on their length. Or up to 1200 individual names/titles/references. The Plus 80 version also embodies a comprehensive Label Printing routine.

In the office, Address Manager can store internal phone directories, store and analyse customer's records, and much much more.

If you've already got Finance Manager and/or Address Manager but in non-Microdrive format, and you'd like to update them, we'll give you a £3 rebate towards the cost of a Microdrive Compatible 32 Column, or £5 off the Plus 80 version. This offer is available via mail order only.

Means serious business!

VAT MANAGER £8.95 PLUS 80 £19.95

Your VAT 100 return need no longer be a headache! Simply key in the Gross or Net values of all the period's sales and purchase invoices and VAT Manager will check, analyse and total all the relevant details. Available in 32 Column or Plus 80 versions, VAT Manager will check all calculations automatically, and will even work out details of exempt totals where the trader is not required to pay VAT. This is performed with its CLASSIFY feature for types of transactions, and GROUP feature for more detailed analysis.

PLUS 80 STOCK MANAGER £19.95

Provides a controlled stock environment for up to 600 different product lines.

The program has facilities for the production of invoices, sales totals, price lists, and shows stock status, stock adjustment and re-order requirements.

No business should be without this crucial Microdrive program. Now you can compute your entire stock balances all on one program - Stock Management has never been so easy! Coupled with a suitable printer it will take advantage of the 80 column width printout to produce quality hard copy.

Now the most helpful aids to business efficiency are as near as your local software stockist. Call in soon and see the latest in OCP's exciting range of business software. Available from larger branches of WHSMITH or mail order direct.

For instant purchase contact the **OCP** Hotline with your details. Telephone: 0753 889 055

SINCLAIR, ZX, ZX SPECTRUM & ZX MICRODRIVE ARE ALL TRADEMARKS OF SINCLAIR RESEARCH LTD.

Simply The Best

4 High Street, Chalfont-St-Peter, Bucks SL9 9QB

continued from page 61

keyboard and at leisure — a printer is not considered essential for this series. The Alphacom printer uses special paper which is quite expensive, it is rather noisy and slow and is again a compromise. It is inexpensive and for the small amount of use to which it will be put at home it is adequate.

The software scene for the Spectrum is far ranging with all sorts of programs available. A goodly proportion of that software is bought over the counter in the high street and the rest is sold by mail order. There is an element of risk in mail order especially when ordering new titles which may not be as ready as the advertisements suggest, whereas in a shop you can see what you are buying.

Unfortunately for the software producers a growing market exists in pirate software. The knowledge acquired in learning to program is being abused by using this skill to copy software. Software piracy is a relatively new phenomenon and as yet there is not really any legislation to tackle it.

Another source of programs is computer magazines, some of which are devoted almost entirely to printing program listings. Most of those programs are written in Basic and are a good source of teaching material. Typing in, amending and running such programs can greatly help understanding of how they work. Learning the location of all the keys is also achieved.

If you want to progress from running programs and want to know how to program then you will need help. That can be obtained by reading books, following a teaching course, reading magazines or by more active methods such as computer clubs.

There are dozens of books published about the Spectrum, not to mention those about Basic. Many of these books are poor in quality and unless carefully selected might be a disappointment. *Sinclair User* reviews many books and you may find a recommendation which will suit your requirements.

To help you learn your way around the keyboard there is a teaching program on the introductory **Horizons** cassette called Keyboard Trainer. It is well worth working through this program, until you are familiar and happy with the keys and their meanings. It explains the modes, K,L,C,E,G and how to recognise which mode the Spectrum is in and what will happen

when a particular key is pressed. Once the use of the keyboard is mastered it will be much easier to type in programs from magazines, you can then learn what all the words and symbols do in a program and eventually progress on to your own programming.

If you are loading and running programs from tapes, or typing in programs from books or magazines, then all you need to know are a few commands — LOAD, RUN, LIST, SAVE, VERIFY and NEW. This is not programming but operating. NEW is a useful command, when used with care, as it causes the Spectrum to restart — almost as if you had turned it off and on. If you do not like a program you have loaded and wish to delete it then NEW will do this most effectively; note that you will still have the copy on cassette tape. LOAD achieves the same thing and

loads another program at the same time from cassette tape. LOAD needs a program name thus:

LOAD "FOOTBALL"
where FOOTBALL is the name of the program on cassette tape.

Once a program is loaded it may run itself or it may need an additional command to start it — RUN. If you have typed in a program then it is very likely that you will use RUN to start it. Before you run it you might need to see a listing in order to correct any typing errors and for that the command LIST is used. LIST will list lines of the program a screen at a time, and to see the next screen you press any key. The lines of a program are numbered, rather like a list of questions. It is possible to use LIST from a particular line thus:

LIST line-number
where line-number is replaced by a line number of the first line you wish to see.

Having typed in the program, run it to see that it works and perhaps correct the odd mistake, then save it to tape for another day with the command SAVE. That takes a copy of the

program from the Spectrum to the cassette tape; if you have set the tape recorder controls correctly it will be a good copy otherwise you will have to SAVE it again.

SAVE "CRICKET"
will save the program to tape. The copy should be checked afterwards by a process known as verification. The command VERIFY is similar to LOAD and it compares the tape copy with that still loaded in the Spectrum.

VERIFY "CRICKET"
will do this and if for any reason it cannot verify then the message
R TAPE LOADING ERROR
will be seen. The only course of action then is to SAVE the program again after checking the cassette recorder leads and control settings. This error message may also be seen when a program fails to load.

The ability to edit lines is also considered an essential skill and one which ought to be practised. Lines are checked for mistakes as they are entered. If there is an error then the line is rejected and it has to be corrected before it can be re-entered. That is called syntax checking and means the line is being checked for grammar such as spelling and order of commands. It ensures the line will be understood by the Spectrum when it is run but does not mean the line is wholly correct; you might have given one instruction where you meant another, which is something the computer cannot know.

Incorrect lines can be corrected by the process of editing. The line is recalled, changed and re-entered. The mechanics of the process are covered in the Sinclair manuals and ought to be practised. The best advice on avoiding mistakes when typing in a program is to take care and pay attention to what you are doing — it takes but a little effort at the time and can save considerable trouble later on.

Finally as a taste of the next article in this series type in the following very short program, making sure there is nothing else in the computer either by switching off and on again or typing in NEW:

```
10 PRINT "PROGRAMMING IS FUN"
```

Type RUN and notice how the computer immediately responds by printing the message in quotation marks on the television screen. By reading the Sinclair manual find out how to put this message in the middle of the screen.

CP software FOR Spectrum, Amstrad, Commodore 64 & QL
THE STRONGEST VERSIONS OF THE CLASSIC GAMES — from good retailers or by mail order

SUPERCHESS 3-5

GUARANTEED TO CONSISTENTLY BEAT ANY SPECTRUM OR COMMODORE 64 CHESS PROGRAM WHATSOEVER

NEW FOR 1985

- ★ Save Game & Program to Microdrive
- ★ On-screen clocks for tournament realism
- ★ Unique new way of setting hundreds of levels
- ★ All play within tournament time limits

FEATURES

- ★ Unique new way of setting levels by time gives you total control with three different options: tell the computer to match your response times, give it a time limit to play to, or give it an average time to make its moves. And you can force it to play its best move found so far...
- ★ Change sides and levels during play if required
- ★ Stop the game and change positions at any time
- ★ Set up particular games you want to try at any stage
- ★ Will recommend your best move when asked
- ★ Can be set to solve problems up to mate in four
- ★ Extensive library of opening moves
- ★ Option to determine your own display and piece colours
- ★ You can play blindfold chess
- ★ Absolutely suitable for beginners; just set the minimum move time
- ★ Fascinating self-play mode for you to study the game
- ★ TOTAL INFORMATION about the computer's thought processes, including: best line of play found so far, number of positions evaluated, depth of search, internal scoring system, display of previous moves if required, help menu if you should ever get stuck

STRONG—100 times faster, 1500 times more intelligent
FAST—from 5 secs to the highest levels, all within tournament times
PENETRATING—at tournament levels it searches at least 7 moves deep, trying tens of thousands of lines of play
FRIENDLY—keeps you informed. Ideal for the expert or as a tutor for beginners
SAVES TO MICRODRIVE TO SAVE YOU TIME

£9.95 48K SPECTRUM

DEDICATED TO EXCELLENCE IN THE GAME OF CHESS

BRIDGE PLAYER 2
THE STRONGEST BRIDGE PLAYER YET

NEW FOR 1985

- ★ Play a realistic game of bridge against the computer
- ★ Computer can play as defender or declarer

At last, here is a program with everything the solo Bridge Player ever needed: The computer generates random hands, allows proper bidding in the ACOL system including the Stayman and Blackwood conventions, and then IT TAKES YOU ON, playing both your opponents' hands. Every feature that can be packed into the Spectrum has been included in this program to give you a really satisfying and enjoyable game of computer Bridge.

FEATURES

- ★ Versatile bidding routines give you a worthy opponent
- ★ Study your game: post-mortem facility allows rebidding and replaying of any hand
- ★ You can review the bidding or play to previous tricks while playing a hand
- ★ Or input a hand or contract of your choice to test yourself
- ★ COMPREHENSIVE ON-SCREEN INFORMATION DISPLAYS: contract, tricks won so far, cards played in current and last trick, score
- ★ Option to BIAS THE DEAL to give you and your "partner" more high card points if you prefer to play as declarer

ASTRONOMER
THE UNIVERSE OF STARS IN YOUR OWN PLANETARIUM

NEW FOR 1985

Astronomer has everything in one powerful program... See the night sky of more than 1000 stars from any time or place on earth. Watch it plot the planets or draw in the constellations for you. See close-ups from the Star Atlas of 362 charts. Watch animated detail of our Solar System in motion and see how it changes with the months. Calculate everything needed for serious astronomy to a high standard of accuracy and produce your own tables to save having to buy them. Anything can be transferred to a ZX Printer.

FEATURES

- ★ Comprehensive Manual with reference sections
- ★ Suitable for serious astronomical study
- ★ Night Sky views from anywhere on earth
- ★ Works for past, present and future times
- ★ Displays over 1000 stars
- ★ Draws the constellations on your command
- ★ Plots the solar system on the night sky
- ★ Huge Star Atlas for detailed study
- ★ Shows the motion of the solar system
- ★ Calculates position for the Sun, Moon, Planets, Comets and Asteroids
- ★ Then plots them on the Night Sky or Star Chart
- ★ Displays the phases of the moon
- ★ The distance from earth of any object
- ★ Sidereal time and rising and setting times
- ★ Ephemeris section: generate and print your own tables
- ★ Fully-compatible with ZX Printer

THRILLING command over the night sky from any time or place on earth
SERIOUS tool for the amateur astronomer — with excellent manual
"For those interested in the night sky it should prove fascinating"
"User friendly"
"Very good value" CRASH Oct 1984

£9.95 48K SPECTRUM

PINBALL WIZARD
FOR COMMODORE 64 AND ANY SPECTRUM

Superb, colourful fast-action graphics and sound give this game the feel of a real arcade pin-table. Realistic launch, flippers, bumpers, high-score, bonus scores and freeball features. Be a Wizard!

"...I thought that a few minutes would suffice, and then found that a couple of hours had passed and I was still at it. Excellent... Pinball Wizard has it made."
CRASH MAGAZINE

"A brilliant idea that's totally absorbing and so addictive..."
YOUR SPECTRUM

"The display is well-designed and colourful and ball movement is very realistic."

SUPERCODE III
FOR 48K SPECTRUM & SPECTRUM+

NEW FOR 1985

150 ROUTINES
100% MICRODRIVE COMPATIBLE

With 150 ROUTINES and 100% MICRODRIVE COMPATIBILITY, this has to be the ultimate Spectrum toolkit. It gives you the power to do everything you always dreamed of with your Spectrum in your own BASIC or M/C programs. Born of the earlier Supercodes (which themselves received 5 star reviews) we can claim confidence that we have packed absolutely everything into this State of The Art development. With interface 1 it transfers easily to microdrive and is recognised by Sinclair as fully compatible. Needs no special knowledge to operate and comes with a comprehensive manual.

FEATURES

- ★ Unique Access Program lets you INDEX/ LIST/TEST/TAILOR/RUN/RELOCATE/SAVE (to tape or microdrive with new or default name) /VERIFY automatically
- ★ Options include EXAMPLE/REPEAT/JUMP/AGAIN/CONT/Tir/DEMO/DIAGNOSIS/MOVE
- ★ 100% menu-driven with on-screen training
- ★ Brilliant user manual
- ★ Routines guaranteed SHORTEST AND FASTEST for all applications

ROUTINES INCLUDE
SUPER MICRODRIVE CATALOGUE-TRACE (with 256 preset program speeds)-SCREEN COMPRESS FOR ADVENTURES (ON ERROR GOTO)-DOZENS OF RS232 AND MICRODRIVE ROUTINES-ON BREAK GOTO- THE SUPER-RENUMBER (Does everything)-VARIABLE LIST-STRING SEARCH-STRING REPLACE-PAINT-FILL-5 SUPERB PROGRAMMABLE SOUND EFFECTS-RECORD+REPLAY SOUND/MUSIC-CONFUSE+UNCONFUSE LISTING-REMKILL-PROGRAM CONTRACT/EXPAND-PROGRAM ANALYSE-NUMBER-VAL COMPRESS-CHARACTER SWOP/SCRAMBLE/INVERT/ REVERSE/ROTATE-WHOLE NEW CHARACTER SET (SC-FU-FLASH+BRIGHT ON/OFF/SWOP-MEMORY FREE -PROGRAM LENGTH-BLOCK LINE+ MEMORY ERASE/FILL/COPY-APPEND CURSOR-SCREEN SAVE/LOAD/SWOP/ MERGE/FILL/SEARCH-HEX -DEC+DEC-HEX CONVERTERS-REMFILL-DATAFILL-GRID-INK+PAPER CHANGE -ATTRIBUTE SWOP/FILL/INVERT/RESET TAPE HEAD READER-PROGRAM PROTECT-PROGRAM BREAK-IN- HEADLESS FILE CREATE-AUTORUN CODE-PROGRAM AS CODE-TAPE COPIER DEFEAT-MICRODRIVE DIAGNOSIS-FAST LOAD MICRODRIVE-SURE SAVE MICRODRIVE-ADAPT TO MICRODRIVE-SURE CLOSE// -STRINGS+PROGRAM CASE CHANGE/SWOP-HEX LOADER-ANALYSE MEMORY-LINE ADDRESS -STARROW-FREE SCROLLER-24 LINE PRINTING-LOWER SCREEN CLS-NEW UDG-PROGRAMMABLE BORDER EFFECTS-REMOVE COLOUR-RIPPLE+SHUTTER SCROLLS+R)-SCROLL PIXELS/CHARACTERS/ATTRIBUTES, SINGLY OR JOINTLY, UP/DOWN/LEFT/RIGHT, WITH OR WITHOUT WRAP-AROUND, IN A USER DEFINED WINDOW OF ANY SIZE POSITIONED ANYWHERE ON THE SCREEN-SPRITE EFFECTS...and many more besides.

 WAFERS

**ROTRONICS WAFADRIVE
 FOR 48K SPECTRUM/
 SPECTRUM+**

Dual 128K storage. Fast access. Centronics and RS232 interfaces. And now FOUR free wafers from SMT, including the Spectral Writer word processing package. We're now including a free 16K, 64K and 128K wafer with each Wafadrive. All this makes the price of £129.95 (inc. p & p) even more attractive.

The Rotronics Wafadrive has now proved itself as the storage system that offers more. More features, more reliability and more speed. Its micro interface, two 128K drives, RS232 and Centronics ports are all contained within one attractively-styled, compact unit. Wafadrive achieves very fast loading and saving but not at the expense of reliability, which is on a par with floppy disk.

The fully interchangeable wafers are available in three sizes - 16K, 64K and 128K. Low capacity wafers are most

suitable for program development as they offer faster access. High capacity is most suited to general data storage. Loading rate is well over ten times as fast as cassette!

Software selection is ever growing - see list below for details. A full colour brochure on Wafadrive and up-to-the-minute software and accessory information is available.

Look to SMT for the best deal on all Rotronics peripherals

**ROTRONICS DX-85
 DOT MATRIX PRINTER**

High quality and high speed. The DX-85 prints bi-directionally at 100 cps, logic-seeking. It offers a 96 character set at 10/12.5/16.5 cpi which extends column width up to 132 characters. Programmable typefaces including extended and italic. Centronics interface standard and free dust cover supplied. Options include typewriter ribbon adaptor, telex roll holder, RS232 serial interface and sheet feeder.

See our special price when bought with Wafadrive. This offer also applies to previous SMT Wafadrive customers (proof of purchase required).

**ROTRONICS
 PORTABLE CASE**

Ideal portable work station. Tailored foam insert holds ZX81/Spectrum/Spectrum+ manuals and cassettes within executive style case. All components remain fully operational in situ.

Size 138mm x 700mm x 363mm.
ONLY £34.45 (p&p £2.50).

New - the official Spectrum Upgrade!

Turn your Spectrum into a Spectrum + for just £20

- Professional full-size keyboard – includes 17 extra keys.
- Responsive typewriter-style action.
- Accepts all current Spectrum software and peripherals.
- Complete with 80-page User Guide and Companion Cassette.

Here's some exciting news for 48K Spectrum owners ... the official Spectrum Upgrade Kit.

The £20 Kit has everything you need to turn your Spectrum into the stylish new Spectrum +. You don't even need an understanding of electronics, just the ability to solder a few wires together! The leaflet in the kit gives clear, step by step instructions.

If you're not sure about doing it yourself, don't worry. Simply return your 48K Spectrum to Sinclair and for £30 we'll upgrade it for you.

Whichever you decide on, you'll also receive the new 80-page User Guide and Companion Cassette.

The bigger, better Spectrum keyboard

The Spectrum + measures 12½" x 6". It has a large typewriter-style keyboard, with hard, moulded keys.

You'll find the new keyboard has a smooth, positive action – ideal for touch-typing, word processing, simulation programs, and extended programming sessions. Two retractable legs give a perfect typing position.

There are 58 keys in all, including 17 new keys. Programmers will be pleased to see dedicated punctuation keys, a space bar, and separate shift keys for graphics and extended modes. And a reset button allows you to clear a program from your computer's memory without disconnecting the power supply.

The official Spectrum Upgrade

Naturally your upgraded computer will accept all the peripherals in your Sinclair system - Interface 1, Microdrives and so on - as well as all

Spectrum software.

Just as important, new Spectrum software and peripherals will be designed with the Spectrum + in mind. So the Sinclair upgrade adds stylish looks, new capabilities ... and new potential for the future.

Included – the new Spectrum + User Guide and Companion Cassette

The new User Guide has over 80 pages of information, including a handy BASIC dictionary. The Companion Cassette provides an interactive tour of the new keyboard, and includes three entertaining arcade games.

TO ORDER BY MAIL:

When ordering the Upgrade Service, send off your 48K Spectrum to the address below, carefully wrapped, together with the completed coupon and appropriate payment. (Please do not return the mains adaptor, manual or other ancillaries.) Your upgraded computer will be despatched to you within 10 days of receiving your order.

When ordering the Upgrade Kit, simply complete the coupon, enclosing the appropriate payment and post it to us at the address below. Please allow up to 28 days for delivery.

BY PHONE: Access or Barclaycard holders can call Camberley (0276) 685311 for personal attention, 9am to 5pm Monday to Friday. Only the Upgrade Kits can be ordered by phone.

Please note: the upgrade offer applies to working 48K Spectrum models in the UK only.

To: Sinclair Research Limited, Upgrade Dept., Stanhope Road, Camberley, Surrey, GU15 3PS.

All prices include VAT, post and packing. User Guide and Companion Cassette.

Please send me the Spectrum + Upgrade Kit. I enclose payment of £20.

OR

Please upgrade my 48K Spectrum for me. I enclose my computer together with payment of £30.

Richard Price investigates the introduction of arcade and animated graphics into adventures

Skadi thro
Loki attac
Loki kills
Leer gets
Skadi arri

ONCE UPON a time in the remote era of the early 80s, adventurers knew exactly where they stood.

When they entered a software store they could ask the assistant for an adventure and be fairly sure that they would end up playing a pure text-based game of the Crowther and Woods variety. No frills, no nonsense, no pretty pictures — just a pile of deduction problems without time limits or fast-reaction sections.

Things have changed since then. The increasing sophistication of machines, programmers and users has spelled the end of comfortable assumptions about adventure. More than anything else, the vastly improved graphics capability of home micros has turned this end of the software market into a confused blurred area.

Now there are arcade adventures and graphic adventures, in such profusion and variety that many defy easy definitions.

Early programmers were faced with a simple problem — adding pictures to a text game used up valuable RAM and drastically reduced the memory available for vocabulary. That would result in descriptions bare of any real atmosphere, badly affecting the playability and general appeal of the game.

Pleasant illustrations of the locations were all very well but players were often peeved to find that they had lost a lot of complexity in the trade-off. Purists would sneer at such unnecessary waste, feeling that companies were conceding to the demands of the contemptible arcade market.

Snobbery aside, there is a lot to be

said for the adventure untainted by graphics — Artic has produced very fine and difficult games in its perennial A,B,C series whilst Level 9 has programmed some of the very best of British adventures, with **Lords of Time** and **Snowball**. Their intricacy is formidable and there is very little doubt that they will remain classics of their type for a long time to come.

Nowadays the majority of commercial adventures use location graphics. Programmers have learnt a great deal about squeezing information to get the best of both worlds — or nearly. Even the most staid, conservative adventure player will not raise an eyebrow to such practices anymore.

It is the power of the arcade game which has begun to exert strong and almost irresistible pressures for change in adventuring. Whatever you feel about them, arcade games, if they are well made, can be utterly compelling, mainly due to their visual qualities. So what is the difference be-

tween text adventure and arcade game?

The skills needed for each type are distinct. In style, most arcade productions deal in your understanding and manipulation of spatial relationships. The problems tend to be of a similar type in any one game and require fast reactions and manual agility. Any sort of intellectual input is limited and the range of activities the central character can perform rarely extend beyond two or three physical actions left, right, jump, fly or the like.

Take a look at Miner Willy, or Ziggy, the odd little hero of **The Backpacker's Guide to the Universe**. Nobody would argue that they can do much or that they possess wildly interesting personalities. There are also no other characters to relate to — the 'other' in arcade games is usually something to be destroyed or used in some way.

In text games there is a vast difference. Whereas in the arcade you progress in a simple linear way from screen to screen, in adventure you are provided with an interlinking and mappable world for exploration as you choose. Problems are hidden or obscured in some way and your major activity is mental. The stress is on persistent thought, intuition and deductive thinking, almost always in a verbal form. The visual has played a very minor part until recently. Puzzles will vary, running from codes to wordplays. Above all, you are given far more time to resolve problems, allowing you to reflect and try an alternative strategy.

Personalities abound — through your own imagination you can become

Behold the quest

the character you want to be. Other people in the game can also behave in a rudimentary human sort of fashion and your success depends on your ability to understand them rather than your speed at killing them. So far this has simply not been a feasible proposition in arcade games.

Slowly but surely the two species are now beginning to intermingle. Finding the missing links is difficult but there are a few types of game which cry out to be candidates.

Although they may not have been hugely popular the monster mazes can claim some part in the history. In those you travelled through large three-dimensional mazes avoiding dinosaurs or vampires, all the while collecting valuable items. There is no text input of any note in those games but they clearly had an influence on today's animated adventures.

Then along came **Valhalla**, where the vicious and unpredictable inhabitants of the Nordic afterworld come to life before your eyes. The little stick figures walk, eat, fight and die on the screen whilst you take part in their antics in a text adventure of some complexity — players are still racking their brains to find the magical objects and there is no sign of its popularity waning. Animation had arrived with a vengeance and in a way about which traditionalists could not really complain.

The speed of development since **Valhalla** has been astonishing. **Halls of the Things** was a milestone in the use of at least some adventure themes in what was essentially an arcade setting. The labyrinthine cavern of the game has doors, treasures and a variety of swift and deadly monsters all shown in a cellular system of interlocking locations.

Magic spells and combat routines are possible and planning plays a great role in your survival. Manoeuvring and manipulating the central figure is no simple task and jaded D&D players can take time out from their cerebral fantasy by enjoying a visually exciting and mentally taxing bit of cut and thrust.

Halls really set the cat among the pigeons and the companies began falling over one another in their attempts to outprogram the other — no bad thing as there have always been plenty of goats sprinkled amongst the sheep of the industry. Knowing the public has the ability to be discriminating concentrates the mind wonderfully.

More experiments followed. **The Oracle's Cave** took a standard adventure plot, animated the central character's journey through a group of caverns and introduced the idea of the single key process to cover certain actions. The animation is superior to that of **Valhalla** though the game does not have the same area or number of possible actions.

The Cave is interesting but is not very gripping to play. All too often the strict time limit on each quest means that you rarely finish. Dorcas has improved the format and eliminated the constricting time scales in its new game **The Runes of Zandos**, which uses similar animation.

Sprite graphic techniques and the

'Animation had arrived with a vengeance and in a way about which traditionalists could not complain'

use of various types of three-dimensional image have now brought what are effectively animated cartoons within the reach of the Spectrum user. One leader in this field is **Ultimate**.

Atic Atac can be said to be the first in a new generation of games where adventure motifs are combined with the thrill and visual appeal of the arcade. Pseudo-3D is achieved by the scene being depicted from above. Players can choose their roles and must travel the haunted rooms of the Castle in search of the fabled ACG key. Within the rooms you will find furniture, food, objects and monsters — the very stuff of heroic adventure but all played with a joystick. That is no simple progression from screen to screen and many routes are available to you in your wanderings. The graphics are sharp, fast and smooth.

Knight Lore, by the same company, took the art a stage further. It is a strong contender for Game of 1984. The 3D effect is vastly improved and the pictures are worthy of a Disney cartoon.

You are given total directional control over the hero; objects have to be collected and returned to the steaming cauldron somewhere in the castle. That is nothing new.

What is staggering is that objects, furniture — even the masonry — can

be moved and used to assist you achieving your goal. Precious objects may well be placed in highly inconvenient places and you will need plenty of the old lateral thinking skills you used in text adventure.

This is an arcade-quality game which can be called an adventure. So, it's not verbal, but it is intelligent and demanding in ways which will appeal to even the most stick-in-the-mud adventurer.

Controlling what amounts to a computer movie is a long way from **Space Invaders** or the original **Adventure** but it is the way things are moving now. **Tir Na Nog** from Gargoyle has the same filmic quality as **Knight Lore** though in a different style.

Here, deep in the mythical world of Celtic legend you send your hero through a landscape which shows convincing perspective, with fore- middle and backgrounds scrolling to help sustain the illusion. Unlike **Knight Lore**, there are other characters, some of whom may be hostile or helpful, but all living their own lives. Again, the game is almost entirely visual but adopts the style of adventure both in its aims and its enormous scope.

It would be difficult to talk about the new generation of adventures without mentioning **Lords of Midnight** and its sequel. The game is set apart from arcade games by using static location graphics and still retains features of the text adventure. Although it is governed by single key presses for choices the sheer vastness of the land gives you a convincing feel of taking part in the terrible campaign against Evil. The sense of moving slowly through the countryside is quite intense as the terrain 'grows' as you approach features.

The game has also taken on some of the qualities of strategy and wargaming. You must control the movements of large numbers of troops and vassals to forstall the assaults of the Dark.

Adventure is spreading its wings. There is a synthesis, where all available techniques are being used for the production of games which once tended to stick jealously to their own territories. The idea of separate compartments for adventure, arcade or strategy is becoming outdated.

Serious adventure players should not regard that as a threat to the games they enjoy most. There will always be text adventures just as there will always be pure arcade games. What is

Extend your 16k Spectrum to 48k for just £27.00.

And get a Free program worth £4.50 into the bargain.

Is the manual past chapter 24 a mystery to you? 'Beyond Horizons' shows 48K Spectrum users how to PEEK and POKE systems variables, how to manipulate the display file, how to control the attributes, how to find out how much spare memory is left and much, much more. With the SP48 this program is free. On its own, £4.50.

SP48B, 32k Memory Extension with Program — £27

The SP48 simply plugs into the sockets provided by Sinclair inside your Spectrum and turns your 16k machine into an absolutely standard 48k ready to run 48k programs.

The SP48 fits Issue 2 and Issue 3 Spectrums. Full step-by-step instructions are provided. Fitting is easy and there is no soldering.

The SP48 carries our full warranty and all our customers enjoy the benefits of our renowned product support.

And you get a free copy of Beyond Horizons, and educational program which has already enlightened thousands of 48k Spectrum owners about the inner workings of their computers.

48/80 FORTH

This compiler and editor is fast becoming recognised as the most professional and highest quality implementation of the FORTH language on the Spectrum. FORTH gives you the speed of machine code without the tedium of machine-code programming.

All the Spectrum's excellent graphics commands are retained including DRAW, PLOT and CIRCLE. Real arcade quality sounds can be produced using BEEP.

More advanced FORTH programmers will find that 48/80 FORTH provides a complete implementation of FIG-FORTH, including the sophistications of BUILDS, DOES and CODE.

Each 48/80 FORTH cassette includes a separate FORTH editor which uses part of RAM as if it were disk. The 48K Spectrum allows a 16k RAM 'disk', while leaving nearly 20k of dictionary space. A comprehensive user-manual is also included, which covers both compiler and editor, and has a lucid beginners introduction.

Extensions to 48/80 FORTH will shortly be available to existing customers at a nominal charge. These will include floating point arithmetic, and microdrive handling.

EAST LONDON ROBOTICS

continued from page 69

exciting is the sudden growth of novel concepts which will add to the repertoire of home computer entertainment.

The more variation, the better; it is healthy for the computing public who will have a wider choice and it is healthy for your imagination. After

all, who really wants to be stuck in the same old repetitive rut year after year.

Making predictions is a tricky business — as one or two computer tycoons may well have realised by now — but the likelihood is that computers will stay well within the reach of Joe Public and will get smarter and faster as chip technology improves. Net-

working should be common soon and video techniques will be enlisted in the search for the game to beat them all. The 'interactive' video cartoon games in the arcades now may well be seen as primitive in a short while. What shape will the networked, truly interactive and fully animated — or filmed — adventure take? Dream on.

At the sign of THE DANCING OGRE

At his inn on the moors landlord Gordo Greatbelly dishes out spicy mead and help for adventurers

NOW, that letter from Janga. I tell you I came near to tapping the messenger's skull with my club when I glanced through it. This miserable Prince Janga, Lord of Maru — a stinking sand-ridden hole if ever I knew one — summoned me to undertake a quest. And, wrote this snivelling fop, if I declined his necromancers would weave a curse so strong that my hair — such as it is — and teeth would drop out and my belly shrink.

Well, I am a superstitious man I knew well that Agonnar, his warlock, could achieve this threat. Where would my business be then, eh? What recommendation is a skinny, starveling, bald and gummy landlord? No, I knew I must forsake the comforts of the Ogre for the perils of the road — and at my age too.

Let us dwell on other things for the present though. The grim rites of the Priests of Artic still perplex many of you. On Espionage Island young Ian McCartney of Birmingham cannot leave the trail in the jungle. Consultations with the priesthood reveal that there is little point in wandering from the path — its whole purpose is to lead you to the boat.

I have a number of missives requesting help with the journey on the Planet of Death. I would suggest to the fair Tomlinson of Matlock that the force field can only be passed in this way — first, fire your laser three times at the field. Then hold the mirror and dance. I have been assured that this is the proper spell. She also asks if the green man is of use. My own experience is that he is best put out of the way and is potentially a serious danger.

Kathleen Burnett of Frazerburgh is equally stranded. She wishes to know whether there is any other route from the shed besides returning past the ravine. Ma'am, it is the only way. Then there is the prison — escape from here is only possible by bribery. Though it goes against the grain, corruption brings results.

John Evans of Merthyr cannot obtain information from the computer on the planet. It seems as if you should first ask for help or a hint. If that achieves nothing then examine whatever you can in the room and keep Looking!

So much for that. Shirley Edge of 12 Maelor Court, Overton on Dee, Wrexham, Clwyd wishes to enter The Inferno but, whatever she does, cannot pass from the Portal into the Circles of Hell. I cannot help her here but those of you have been that way may know.

Andrew Willshire has embarked on a Classic Adventure and is labouring in vain with a vending machine. I think you must first pour oil on it to loosen its workings and then drop any coins you have. It should work well enough then.

A metal smith of Nottingham, Ralph Venables by name, cannot even begin his quest yet — he cannot pass the great snake which blocks his way. I hope he has his flute with him — he will need it. Play this flute and you will soon see the serpent sleep. There is more though; when you see it nodding off release your bird and the snake will flee in utter panic.

Former deck-hand Neil of the Wood is landbound in the saga of Erik The Viking. Ah, Neil — this is

no mystery to one such as I! If you wish to board the Gold Dragon, Erik's longship, do thus: summon your crew with a horn blast. When they have assembled at the boat-shed, pull the ship down to the shore. Here you can enter the boat at your leisure.

Simon Yates watered his steeds at the Ogre whilst returning from Kentilla. He tells me that saying 'Kentilla' transports the great sword to your hand — useful in a fight. To cross the river Cara adventurers should throw or swing a rope, and pulling the arms from a gargoyle statue within the castle will open a steel door leading to a teleport chamber. Simon could not use the furnace in the castle nor open the desk there. Should you be able to help him he can be contacted at 100a Trentham Road, Langton, Stoke on Trent.

So, farewell until we meet again next moon. Zul and Zel have begun packing my weapons and rations — we have ten mules for the purpose. I have little taste for foreign fare and my own beer is still the best. Tomorrow we set off for Maru. Your letters will reach me by the Royal Couriers, so fear not and keep writing.

Gordo Greatbelly, landlord

If you have a tale to tell, or are in need of a helping hand, write to the Landlord of the Dancing Ogre c/o Sinclair User, Priory Court, 30-32 Farringdon Lane, London EC1R 5BH.

Eureka!

DOMARK

Dear Reader

16th January 1985

You've probably heard all about **Eureka!**, the '5 games in one' graphic adventure written by Ian Livingstone with a £25,000 prize. No one has yet won it although many of you are extremely close.

The storylines travel through five time zones of our history - Prehistoric, Roman Empire, Medieval Britain, Colditz and the Caribbean, where you come face to face with the evil Hugo Von Berg. He is holding us all to ransom and demands to be made Emperor of the World, otherwise he will destroy it. A secret telephone number direct to the British Prime Minister has been specially installed for you to ring when you have worked out the secret code which will save us all. You must find this code and decipher the telephone number.

The **Eureka!** Hotline number is:

01-460 1115

Ring this at any time to witness Von Berg's evil progress and to check that the prize is still available.

We wish you all the best of luck in your search and to help you on your way, will send you a FREE Guide to Adventure Games (no clues to the £25,000 though!) if you send in a stamp plus your name and address to us.

Happy searching!

Mark Strachan

Spectrum Shops and all good software dealers. Trade enquiries welcome.

LOOK!

**NOW THERE ARE
HI-RES PROGRAMS FOR
THE 16K ZX-81**

FORTY NINER

In 1849 the Great American Gold Rush started. Almost everyone who could sold up everything and dashed to the west coast to look for this precious metal – including you!

You must excavate this precious metal – but can you survive the giant rats and that vicious Gremlin which will come to infest your mine? Can you trick the snakes into leaving their comfortable nests and destroy the rats for you? Can you keep the Gremlin at bay?

Riches await you – but so do the hazards!

- 1. Nuggets
- 2. Giant Rats
- 3. Burrowing Rat
- 4. Support
- 5. Cave In
- 6. Snake
- 7. Snake Nest
- 8. Gremlin
- 9. Mound
- 10. Pile of Earth
- 11. Cave

ROCKET MAN

Get rich quick by collecting Diamonds that are simply lying there waiting for you! Oh... I forgot to mention that there are one or two problems!

There is an expanse of shark infested water between you and the Diamonds and a strange breed of Bubble that seems hell bent on getting you in it! Somehow you must cross it...

You have a Rocket Pack to help you (a Vulture on higher levels) but you must rush around the platforms and ladders collecting cans of fuel (legs of lamb with the Vulture) and cursing that weird Bubble. Once you have enough fuel then it's Chocks Away!

Oh... but don't run out of fuel on the way – otherwise it's... SPLASH!

- 1. Diamonds
- 2. Sea
- 3. Platforms
- 4. Ladders
- 5. Fuel Cans
- 6. Rocket
- 7. Vulture
- 8. Leg of Lamb
- 9. Player
- 10. Bubloid
- 11. Fuel Gauge
- 12. Men remaining

W-new-new-new-new-new

Z-XTRICATOR

A long time ago, in a galaxy far, far, away a terrible war took place between two hostile races. Any prisoners taken could not expect to live very long in the hands of their captors. Their only hope lay with a group of valiant warriors – the XTRICATORS – whose task it was to rescue fellow beings from the alien planet's surface. You are about to take on the role of such a warrior...

Please send me:

	QTY	TOTAL AMOUNT
FORTY NINER £5.95		
ROCKET MAN £5.95		
Z-XTRICATOR £5.95

PROGRAM PRINTOUT

GRAPHICS INSTRUCTIONS

Instructions for graphics characters are printed in lower-case letters in our listings. They are enclosed by brackets and separated by colons to distinguish them and the brackets and colons should not be entered.

Inverse characters are represented by the letter "i" and graphics characters by "g". Thus an inverse W would be represented by "iw", a graphics W by "gw", and an inverse graphics W by "igw".

Spaces are represented by "sp" and inverse spaces by "isp". Whenever any character is to be used more than once, the number of times it is to be used is shown before it, together with a multiplication sign. Thus "6*isp" means six inverse spaces and "(g4:4*i4:g3)" would be entered as a graphic four, followed by an inverse four repeated four times, followed by a graphics three. Control codes appear with cc before the appropriate key. They are obtained by pressing Caps Shift while in Extended mode.

Where whole words are to be written in inverse letters they appear in the listings as lower-case letters. Letters to be entered in graphics mode on the Spectrum are underlined>.

Inverse characters may be entered on the ZX-81 by changing to graphics mode and then typing the appropriate characters and on the Spectrum by changing to inverse video and typing the appropriate letters. Graphics characters may be entered on the ZX-81 by changing to graphics mode and then pressing symbol shift while the appropriate characters are entered. On the Spectrum graphics characters may be obtained by changing to graphics mode and then pressing the appropriate character. User-defined graphics will appear as normal letters until the program has been RUN.

GHOTI

A TASTY dish for a funky fish awaits you in **Ghoti** by K Jefford of Upminster, Essex. You must eat as much plankton as you can in a single day to survive, but watch out for the diving turtles which terrorise the denizens of your cosy swamp. Full instructions are provided, and the game runs on any Spectrum.

Ghoti uses our special abbreviations for graphics characters, so please read the above instructions before entering the program.

48K
SPECTRUM

Acclaimed the best football simulation game....

"...after using it for several days I had to write and congratulate you on a really excellent program." - A.M. (Middlesex)

"The program is addictive, last night I spent from 11.00a.m. to 11.30p.m. taking Leeds to win the championship by 1 point." - I.B. (Shropshire)

"I must congratulate you on an outstanding game well worth every penny. Thank you." - S.S. (Essex)

"My son and grandson in Australia are delighted...a gem...neither of them have stopped playing it. Thanks for a great game." - N.C. (West Sussex)

"I thought I should write because of your excellent game." - Mr. McD. (W. Mids)

Note the following true-to-life features....

● Full 11-a-side match action

● On-screen commentary showing current score, name of player in possession, time played

7 REASONS TO GO MICROFRAME . . .

Disc interface connects up to two mini or micro floppies.

PROM boots Disc Operating System into on-board 16K DRAM.

Decoding circuit for up to 256 I/O channels.

Easy expansion with a 5 slot card frame.

Full buffering on signal lines.

External System Reset button.

Simply plugs directly into the Spectrum.

The GORDON MICROFRAME plugs directly into the back of any Spectrum, allowing the user full control of over 256 I/O channels through its 5 slot motherboard. It also has a floppy disc controller interface which boots the operating system into 16K of memory which shadows the BASIC ROM. The operating system supports basic commands such as load, save, merge, erase, cat., open and close.

To purchase a MICROFRAME or obtain further information about all GORDON MICRO products, including the full range of interface cards, please write or telephone:

GORDON MICROFRAME £149.50 (inc. VAT) (plus £3.00 p & p)

Gordon Micro Limited, 3 Callendar Rd, Heathfield Industrial Centre, Ayr KA8 9DJ.
Telephone: (0292) 280467.

THE FASTEST WAY TO GET THE BEST PROGRAMS

Software Supermarket is a very different kind of software shop. First, we actually play all the programs ourselves - and choose just the best to offer you. Second, we send FREE with your order our unique 32-page catalogue of the best programs - which quotes all the reviews and even lists load times! (For a catalogue only, send £1 cash and we will send you a voucher for £1 off any order - plus your catalogue.) Third, **WE ALWAYS TRY TO SEND OUT YOUR PROGRAMS ON THE SAME DAY WE GET YOUR ORDER.** UK prices include VAT. Export prices are the same (plus p&p). To order by VISA/ACCESS call 01-789 8546 at any time, 24 hrs a day. We're not the cheapest, but our customers in over 40 countries tell us we're the fastest - and we only sell the best.

GHOSTBUSTERS "The best game I have ever played on a micro...the graphics are superb and the sound is better than anything you've ever heard...this game is terrific." (Comp&VidGames). "Simply brilliant...colourful, creative and slick graphics...it's a winner." (PersCompNews). "The speech synthesis is very good indeed and the tune is really catchy...THE GAME IS REALLY JUST AS GOOD AS THE FILM." (PopCompWkly). (ACTIVISION) CASSETTE £10.00

DOOMDARK'S REVENGE "Actually improves upon 'Lords of Midnight' by developing the graphics, options available and scope of the game." (PopCompWkly). "How Mike Singleton has managed to pack so much into 48K is a mystery." (MicroAdventurer). 48,000 entirely new graphic views. 20-page manual: keyboard overlay. 28 single-key commands: PRINT out a record of your quests. Very long, totally absorbing adventure. (BEYOND) CASSETTE £9.95

MINI OFFICE "QUITE EXCEPTIONAL value... the first affordable program suite I have seen... I strongly recommend beginners get this first." (PersCompNews). 4 programs on one tape all working with EPSON-compatible printers. **WORDPROCESSOR: DATABASE: SPREADSHEET: GRAPHICS.** An amazing collection at an unbelievable price. (DATABASE) CASSETTE £5.95

RUNES OF ZENDOS "Although the game stands up as an adventure in its own right, it is the superb animation which will be the more immediate attraction of what is a very fine game." (CRASH) 12 GRAPHIC ADVENTURES FOR THE PRICE OF 1. There are 12 gates to the castle of Zendos the wizard and each one leads you into a different, but very graphic, animated adventure. Understands every word it displays. **SAVE TO TAPE OR MICRODRIVE** (DORCAS) CASSETTE £7.95

CYCLONE "STUNNING is the word to describe these graphics. The game is so absorbing you lose track of time...even the sound is good...The best game I've seen in months." (HomeCompWkly) "Tornado Low Level" with even more impressive graphics and much increased playability...a winner, the best ever Vortex game." (PopCompWkly). The helicopter movie -by the T.L.L. programmers. Kempston/Interface2/Cursor STICKS. (VORTEX) CASSETTE £6.95

THE ILLUSTRATOR "Just about the best designer program I've seen for the Spectrum...one other amazing detail - it still leaves a total of 35K for your adventure." (PopCompWkly). The Illustrator allows full-screen hi-res pictures to be added to your QUILLed adventures. Your pictures use only 100 - 600 bytes each! 19 commands: 8-direction cursor: 28-page manual. (GILSOFT) CASSETTE £14.95. THE QUILL adventure writer program also available at £14.95.

DESIGNER'S PENCIL One of the simplest and clearest drawing programs we have ever used. Brilliant use of a full-screen scrolling menu where, in a very Macintosh-like way you move an arrow around with the joystick and point out the commands you want to execute. 32-page 'hands-on' guide. Demo. Capable of most effects, including even recursion, with variable drawing speeds. **SAVE AND PRINT.** (ACTIVISION) Kempston/Interface2/Cursor STICKS. CASSETTE £9.95

SYSTEM 15000 "One of the most gripping and compulsive Spectrum games so far...utterly absorbing and compelling...absolutely recommended" (SinclairUser) "AN ABSOLUTELY WONDERFUL IDEA...ARTIFICIAL HACKING! System 15000 closely mimics a vast number of different databases and you have to hack your way around discovering passwords." (PopCompWkly) "The game provides a convincing simulation of the hacker's trade." (YrComputer) (CRAIG) CASSETTE £9.95

WHITE LIGHTNING "The most extensive and effective games-making package yet to appear...almost as fast as assembly language, but easier to use. IF YOU WANT TO WRITE A GAME OF COMMERCIAL QUALITY USING A GAMES DESIGNER, THIS IS THE ONE TO BUY." (YrComputer) "Anyone who wants to write compiled games ought to buy White Lightning. It is easily the most complex games language on the market and produces stunning effects on the screen." (Sinclair User) (OASIS) TWO CASSETTES £14.95. MICRODRIVE VERSION £19.95. MACHINE LIGHTNING: TWO CASSETTES £19.95

BLOCKBUSTERS The official version of the TV series. Compulsive general knowledge game for 2 players with hundreds of questions and spare sets to be loaded. 73K of program altogether! 9 skill levels. Plays the 'Blockbusters' theme and is tolerant of speed-spelling errors. Very hard to stop playing! (MACSEN) CASSETTE £7.95

COMPLETE MACHINE CODE "THE BEST MACHINE-CODE TUTOR...no serious Spectrum programmer should learn machine-code without it." (Crash) "Simple to use...the lessons are comprehensive enough to help even the beginner...an excellent introduction to assembly language...very user-friendly." (SinclairUser) Over 70K of data loads in 4 parts from 2 cassettes. Helpful manual. (NEW GENERATION) TWO CASSETTES £14.95

RAID OVER MOSCOW "Much more difficult and challenging to play than 'BeachHead' and will certainly take a lot longer to master." (Comp&VidGames) "An excellent arcade spree...will bring hours of fun and challenge." (CCInt) Begin with the 'view from space' at S.A.C.HQ then lead your squadron to knock out Soviet missiles and eventually attack the Kremlin. Morally, a bit dubious, but everything else is perfect! (J.S.GOLD) Kempston/Interface2 STICKS. CASSETTE £7.95

KNIGHT LORE "THE MOST TECHNICALLY SUPREME GAME I HAVE EVER PLAYED. It is a hideously addictive and compelling arcade/adventure. The game is a triumph of design." (PopCompWkly) "Quite simply the most technically awesome game Ultimate have released." (PersCompNews) "This is the first 'arcade adventure' that requires good arcade skills and presents a series of problems to be solved within a satisfying whole." (YrComputer) (ULTIMATE) Kempston/Interface2/Cursor STICKS. CASSETTE £9.95

ON/OFF SWITCH! Probably the most useful Spectrum add-on is this off-on switch. Stylish black switch clips on to your Spectrum and stops you pulling the power lead in and out ever again. No soldering, glueing or anything. Takes 5 secs to fit and works brilliantly. £4.95

THE QL has excellent graphics potential, but little help is given by the manual to realise it. Philip Smith of Biggin Hill, Kent has written two programs to define your own characters.

The first listing enables you to redefine any part of the character set from space to copyright. When you have your new set of characters, you can SAVE them. The second program consists of two procedures for using the new set. Procedure 'udg' should be used once and LOADs the new set into memory. The second procedure, 'start char set,' should be used every time you open the stream.

To return the characters use: POKE L 167722,41304.

The program uses our special abbreviations for graphics, so please read the instructions on the first page of Program Printout.

```

Gobble up the mice but watch out for the much more dangerous rats in **Paws** by Terry Braverman of Cambridge for the 48K Spectrum. Luckily you play the part of a particularly gruesome moggie with poisonous spit just right for dealing with the rats.

Paws was an entry in the 1984 Cambridge Awards competition and is compatible with the Kempston joystick interface. Full instructions are given in the program.

Paws uses our special abbreviations for graphics characters, so please read the instructions on the first page of Program Printout before entering the listing.

seeing red

WHAT do Scottish men wear under their kilts? The bull knows and it is seeing red in this game for the 16K Spectrum. The author, C C Stock of Chelmsford, puts you in the role of the bull taking it out on the farmer.

This program uses a graphics notation explained at the start of Program Printout.

UNISTAT

STATISTICAL PACKAGE

MULTIVARIATE REGRESSION: Main output consists of estimated coefficients, t-stats, standard errors, R^2 , corrected R^2 , standard error of regression, F stat, and Durbin-Watson stat. Further output options: multiple correlation matrix, var-covar matrix, ANOVA of regression, residuals, plot of residuals, interpolation. Data options: Log/ln option for each variable, no-constant regression, choice of dependent variable, selection of independent variables, auto-omission of linearly dependent variables.

ANALYSIS OF VARIANCE, SCATTER DIAGRAMS AND TIME SERIES PLOTS: One-way and two-way (without interaction) ANOVA tables, scatter diagrams of paired data and time series plots with auto-scaling.

STATISTICAL TESTS, CORRELATION COEFFICIENTS AND PROBABILITY DISTRIBUTIONS: Basic stats on each column of data (size, sum, mean, variance, std. dev.), Chi-square (contingency table), t (one sample, two sample, paired), F, Mann-Whitney U, and Wilcoxon signed rank tests. Pearson's, Spearman's rank and Kendall's rank corr. coeffs. Chi-square, t, F, binomial, Poisson and normal (std., non-std.) distributions. Results of tests and corr. coeffs are displayed with significance levels.

DESCRIPTIVE STATISTICS, FREQUENCY DISTRIBUTIONS AND HISTOGRAMS: Analysis of raw data or data with frequency counts. Raw data sorted and grouped. Choice of lower bounds and class intervals. Absolute, cumulative and relative frequencies. Histograms with up to 200 classes. Output displays sum, mean, mean deviation, median, variance, std. dev., 3rd and 4th moments, skewness, kurtosis, range, etc.

All programs are datafile compatible with Matrix Operations program in UNIMAX package. Data matrix capacity examples (columns by rows): **CBM-64:** 2x1250, 5x700, 10x380, **BBC-B:** 2x750, 5x400, 10x200, **48K Spectrum:** 2x1800, 5x900, 10x500. **CBM-64 (disk/cass): £85, BBC-B (disk/cass): £85, 48K Spectrum (mdvcart/cass): £60**

UNIMAX

LINEAR PROGRAMMING PACKAGE

LINEAR PROGRAMMING: A powerful and instructive optimisation program capable of handling all sorts of linear programming problems (min/max, any combination of $< =$, $=$, $> =$ constraints and $x_i > = 0$, $x_i < = 0$, $-\alpha < x_i < \alpha$ sign constraints). Primal, canonical, dual and their solutions are displayed in standard mathematical form. Unbounded problem and no feasible solution prompts. Edit option for all inputs. Capacity examples (variables by constraints): **CBM-64:** 10x35, 25x30, 40x25, **BBC-B:** 10x25, 20x20, **48K Spectrum:** 10x45, 25x35, 50x25.

MATRIX OPERATIONS: Inversion, transposition, determinant, pre- and post-multiplication, scalar multiplication, addition and subtraction of matrices and vectors. Any output can in turn be used as the input of the next operation without re-typing. Matrices can be saved or loaded at any stage. Datafile compatible with UNISTAT package. Capacities: **CBM-64:** 35x35, **BBC-B:** 25x25, **48K Spectrum:** 45x45.

CBM-64 (disk/cass): £60, BBC-B (disk/cass): £60, 48K Spectrum (mdvcart/cass): £45.

Prices include VAT and delivery within the UK. For orders from Europe add £1.50, outside Europe £3.00 per item for airmail post. Dealers enquiries welcome.

COMMODORE 64, BBC-B, 48K SPECTRUM

- * Comprehensive user manual
- * Full data handling facilities (display, print, change, save, load)
- * All results can be printed out *

For a better image

The Sinclair QL gives you the best in micro technology. So why entrust it to a screen that cannot match this?

A blurred, incomplete or fuzzy image can ruin even the best program. Not to mention the strain it may put on your eyes.

Now, we can offer you the monitor to match the micro.

The Prism QL14 colour monitor has been designed to meet the exact needs of the QL.

It gives you clear, pin-sharp graphic images, and the ability to display the full 85 column text available on the QL.

And the light-weight Prism QL14 is fully portable, incorporating a retractable handle and is provided with the necessary connecting cable.

PRISM

TRANSFORM LTD. Computer Accessories

ZX Spectrum and QL Microdrive Storage Box

- Designed to match QL and Spectrum
- Holds 20 cartridges and index cards
- Fully interlocking

Available Now

QL Centronics Interface	£39.95
QL Dust Cover	£5.00
QL RS 232 Lead	£10.00
Spectrum Monitor Connector	£11.50

• We also supply printers, monitors, labels, ribbon and listing paper.

£5.95

Available from selected WH Smith's and leading computer shops

ELFIN WAY

THE SHADOWY landscape in which the Elves hide is fraught with danger of both natural and supernatural origin. Climb up to peaceful hill-tops but beware the chasms which could spell your death.

Also be wary of Goblin Settlements. Those evil folk love their weapons as much as they hate Elfkind.

This gentle adventure for the 48K Spectrum was written by J Gorman of Greenford in Middlesex.

Infinite Scroll

REMOVE the pauses in a long screen listing with the **Infinite Scroll** utility for the 16K Spectrum. Written by Jonathan Hatcher of Bournemouth in Sussex allows fast smooth scrolling through any Basic program without have to press 'ENTER' to continue. It is a boon to all programmers.

48K SINCLAIR ZX SPECTRUM

"ALIEN 8" recommended retail price £9.95 inc VAT
Available from W.H.SMITHS, BOOTS, J.MENZIES, WOOLWORTHS
and all good software retail outlets. Also available from
ULTIMATE PLAY THE GAME, The Green, Ashby-de-la-Zouch, Leicestershire LE6 5JU
(P&P included) Tel: 0530 411485

You should see what he's just seen.

Micronet 800.

Stretching the mind of your micro far beyond its limits.

Micro evolution continues with this unique communications, information and software system. Set on our mainframes nationwide.

Includes 30,000 pages and access to Prestel™ with its full range of services.

A tremendous Communications section that networks you to thousands of other members across the country. Send and receive electronic messages and graphics at a touch of a button.

And there's the Chatline service, Swapshop and Teleshopping.

Check with daily updates on the very latest computer news.

Micronet also has its own huge facts data base.

And a choice of up-to-the-minute software to download absolutely free.

For only £13 a quarter and just a local* telephone call whenever you want to connect up (that's only 22p per half hour at cheap rates) you could be part of Micronet.

The only accessory you need is a Modem.

A small price to pay to join the other visionaries on this exciting new system.

Fill in the coupon for more details and send to Micronet 800, Durrant House, 8 Herbal Hill, London EC1R 5EJ.

But be warned, Micronet 800's features are almost limitless and constantly updating. So maybe you'd be better to call in at Laskys, John Lewis, main Boots or your local Micronet 800 Action Station.

To feast your eyes on all the amazing things it can do.

To: MICRONET 800, Durrant House, 8 Herbal Hill, London EC1R 5EJ. Telephone 01-278 3143. Please send me the full facts about Micronet 800.

Mike Wright assesses new packages for Spectrum and QL on page 103, and there are more goodies in the Shop Window on page 104.

SINCLAIR BUSINESS USER

Transform top

REFERRING to the letter 'Transform Warning' in your January 1985 issue, I feel that Mr Delby has been remarkably unfortunate with his professional keyboard from Transform. I bought one some months ago and had no problems except for an occasional jump in picture response.

The letter enclosed by Transform said that I might have problems with Spectrum Issue Three, which I have, and following a most helpful phone conversation, I purchased the recommended buffer — delivered in under 24 hours. Since then I have had perfect results from my keyboard and Spectrum — including microdrive, printer, **Tasword II**, **Masterfile**, **Tasmerge** and so on.

Would that more suppliers were as co-operative as Transform.

M G Miller,
Chertsey,
Surrey.

IN ANSWER to L S Delby, who condemns the Transform keyboard, I have such a keyboard and have experienced no problems whatsoever.

He should realise that no matter how strict quality control is, the odd defective unit does escape detection.

If he had looked at past issues of *Sinclair User* he should have noticed that in the June 1984 edition, in the

review of keyboards, it was stated that there were some problems with the keyboard when used with Issue Three Spectrums, so he had been forewarned.

I recommend all readers considering buying a keyboard to consider strongly the Transform keyboard; it is excellent.

Derek Easton,
Falkirk,
Scotland.

Spreadsheet satisfaction

I READ in the January issue the letter from W L Simpson and it prompts me to write, not just on that particular question, but generally on the Spectrum.

My company has Olivetti and Tandy computers, which I use regularly; but on a number of occasions I have used my Spectrum for

the development of new systems.

This letter was typed on a 48K Spectrum using **Tasword II**, which I have also used for producing a small mail-shot. I also use **Omnicalc** for our annual budget, and in addition have recently devised a computer estimating system.

Probably the best business program for the Spectrum is Campbell's **Masterfile**. I am using this program to develop an order entry system and related production list.

So the answer to Mr Simpson is that **Omnicalc** is a reliable and useful tool. The Spectrum is capable of excellent work and will give real benefits to any serious business user.

M A Harris,
Edenbridge,
Kent.

I NOTED with interest the letter from W L Simpson since I am also a church

treasurer and employ a 48K Spectrum in connection with that task.

I find the Campbell **Masterfile** package best because although it is not a true spreadsheet — one does need a pencil from time to time — that is balanced by the ease of creating records coupled with the ability to total by category.

I handle accounts bearing upwards of 600 entries each year and certainly the Spectrum with **Masterfile** has made the preparation of interim and final balance sheets very much quicker. It is also easy at finance committee meetings to find specific items.

While on the subject I have written programs in both Basic and Pascal — using the Hisoft compiler — to compile figures for the recovery of income tax relating to deeds of covenant.

E W Bromley,
Biggleswade,
Buckinghamshire.

Unjustifiable criticism?

I WAS interested to see your review of Wafadrive and **Spectral Writer** in the December issue, and I agree with most of your reviewer's comments. However, he was wrong when he said that you cannot justify a paragraph at a time with **Spectral Writer**. The AND command is used to reform a single paragraph with **Spectral Writer**, exactly as the STEP command is used in **Tasword**.

I have found only one problem with **Spectral**, and perhaps a reader may be able to help me. I was able to add another option to the **Tasword** menu, to allow for printing multiple copies of reports without having to return to the menu and printing option after each copy. It is just a simple FOR — NEXT loop which repeats the printing process a specified number of times. Provided you enter a form

feed printer control at the end of the last page of your text, it works perfectly.

A similar arrangement will not work with **Spectral**, because it prints from the cursor to the end of the file, and after the first printing the cursor stays at the end of the text until you return to the text file option.

Carol Brooksbank,
14, Willow Grove,
Tile Hill,
Coventry CV4 9EP.

Are you taking your Spectrum seriously?

£69.95
plus
£2.00 p&p

The Transform Keyboard transforms your Spectrum into a fully operational professional machine.

- Will incorporate micro-drive interface and power supply
- 60 keys including fullsize space bar
- Large ENTER key
- Full stop, comma, semi-colon, colon, single delete and edit keys
- On/off switch with LED
- Easy installation – no soldering required
- Black anodised case
- Now with 3 colour printed key tops
- EMODE key

"Its price of £69.95 reflects the kind of use to which it will be put but it is certainly the top keyboard at the moment."

SINCLAIR USER JUNE 1984

Business Software

Business Bank Account £10.75

This program will enable you to enter debits under 17 different subheadings. Statements include totals of all subheadings.

Sales Day Book £10.75

For all your invoices, this program will enable you to prepare statements of outstanding invoices. Program will also calculate VAT.

Purchase Day Book £10.75

Keeps a complete record of all your purchases under 17 different subheadings. This program also calculates VAT.

Business Pack £25.00

Including all the above programs.

Stock Control £10.75

Handles 900 lines, including details of supplier. Program has full search facilities enabling you to search and update all lines from one supplier.

Invoicing £15.00

This program will print out invoices, calculates discounts and VAT. The program will calculate totals from unit prices. Up to 50 accounts with 250 outstanding invoices.

Word Processing by Tasman £13.90

Tasword Two is a powerful word processing program that will perform all the functions available on large processors. The program will give you 64 characters per line on screen.

Masterfile by Campbell Systems £15.00

This is one of the best database programs available for the ZX Spectrum. This program has many uses in a small business.

Dian by Campbell Systems £7.95

Use your Spectrum to sell your products. Dian will display messages in up to 11 different typefaces. Will scroll text in any direction.

64 Column Generator by Tasman £5.50

You can use this program within your other programs to display 64 columns on screen.

Payroll by Byte One £19.95

This payroll program will handle up to 40 employees and will calculate NIC, PAYE, superannuation and many other deductions. This is a very user friendly program and extremely good value.

NEW

Sales/Purchase Ledger Invoicing £25.00

This program is for use on micro-drive only. The program will print an invoice using a built-in price list and post the invoice to your customer's account. Will also print price lists, statements, labels etc.

Tasmerge £10.95

Allows you to transfer data from Masterfile into Tasword enabling you to use Tasword for mail merge. The program allows you to specify line and column of each field. For use on micro-drive only.

Superfile £14.95

This is a new database program that stores pages of text 64 columns x 22 rows. The program includes word processing and full search facilities.

Omnicalc 2 £14.95

This is the long-awaited micro-drive version of omnicalc complete with histograms and many other features.

Projector 1 £13.90

Business graphics program that will help you present your cashflow, sales expenditure in many different ways including pie line, and histogram charts.

Tasprint £9.90

Use this program with Tasword Two to produce 5 different fonts on a dot matrix printer.

MF-Print £6.95

Enables you to set a print format for your full-size printer within masterfile. Supplied complete with masterfile for £19.95.

Trans Express £9.95

Micro-drive utility program which will enable you to backup all your micro-drive cartridges.

Now in stock

Blank micro-drive cartridges £4.95
Continuous paper £12.99
Printer ribbons from £3.50

QL

Centronics Interface £39.95
QL Dust Cover £5.00

Transform can supply a wide range of printers, monitors, and leads for the QL. For further details send S.A.E.

Monitors

It is possible to connect your Spectrum to both Black/Green and composite Video monitors using high resolution monitors are particularly useful with programs like Tasword that use 64 columns. We supply complete instructions on how to connect monitors to both Issue Two and Issue Three Spectrums. These monitors can also be connected to your QL.

Phillips black and green £75.00
Kaga/Taxan black and green £99.95
Sanyo Med res for QL £273.60

Printers

All the software we supply runs on full-size printers (unless you are using interface 1) you will require an interface to connect your Spectrum to a printer, the interface we supply uses the graphics characters to set printer codes as in Tasword and prints a double size screen dump.

Centronics/RS232 Interface £45.00

Dot matrix printers

Brother HR5 £132.00
Brother M1009 £163.00
Star Gemini 10x £199.00
Epson RX80 FT £229.00
Epson FX80 £324.00

Daisywheel printers

Smith-Corona TP I £189.00
Silver Reed EXP500 £284.00
Brother HR15 £349.44

Please add £5.00 delivery plus VAT to the price of printers and monitors. All software prices include VAT, post and packing.

TRANSFORM LTD. (Dept. SU) 01-658-6350

Sending circulars the easy way

Documents from files: Mike Wright finds the latest software package wanting

A NEW PIECE of independent business software for the QL has arrived — **Quilmerg**, produced by Pitch Associates. It attempts to fill a space left by the original Psion package and is designed to merge database fields stored in an **Archive** file into a document created by the word processor **Quill**.

The program is written in SuperBasic and will handle documents about three pages long and with up to 15 different fields. Each field is restricted to a maximum of 25 characters.

Before **Quilmerg** is used two separate files must be produced, one of which contains the selected records from **Archive**. Once the required records have been selected they are written to a file using the Export command. Apart from the restrictions mentioned above, the fields must be character fields — they must end with a sign — and their names must be less than 15 characters long.

The second file contains the document. It is created using the print option in **Quill** and typing in the name of a microdrive file when **Quill** suggests printing to a printer. The blank document is typed in as normal but where a field is to be merged from the **Archive** file the name of the field is typed in surrounded by `<` and `>`.

The first disadvantage is that **Quilmerg** will not reformat the document after the fields have been inserted. That means, effectively, that the field name inside the brackets must be padded out to the length of the longest record. That in turn produces unsightly gaps for data with fewer characters and makes it difficult to use with text that is centred or right justified.

Quilmerg is loaded using the 'lrun' command. The option of loading directly from the F1 Monitor/F2 Television option has not been provided. Once run **Quilmerg** asks for the file-names of the text and merge (database) files. It also allows various parameters to be set. Those include the printer baud rate, the serial port to be used, the type of paper and the

number of lines per page and characters per line.

Once the parameters have been set the program searches for the first record and displays it on the screen. You then have the option of printing the text using the record or of moving onto the next record in the file. If the print option is selected the data is merged with the text file and printed.

Once all the records have been dealt with, the message 'Quilmerg complete' is displayed and an analysis of the number of records read, printed and reprinted is shown.

The program, however, remains something of a curate's egg. The program is easy to use and certainly

fills a void, yet it leaves a disappointed feeling. That may be due to the limitations on the fields and the gaps left by not reformatting the text.

Other aspects indicate a lack of thought in the preparation of the program, such as the title screen. That is fine if the program is loaded from TV mode but if you are in Monitor mode it is squashed into the right-hand window with the consequent overflow. Another minor but irritating point is at the the end of the merge, when you are dumped into SuperBasic and have to enter 'run' instead of being given the option of another run or going to SuperBasic.

Despite those disadvantages it should be pointed out that it is the only program available to fill this gap and it is certainly easier to send out circular letters this way rather than manually inside **Quill**.

QUILMERG

Electrifying efficiency in office automation?

A four-in-one package attempts to ease the monotony of general administration

EVEN IF your office comprises only one filing cabinet, a battered Remington, a desk and telephone, attempting to run it from a single 48K program is unlikely to make the difficult task of office automation any easier.

Electric Office from Fisher Software, however, is a suite of four programs on one cassette which tries to do just that. The programs consist of a word processor, mailing list, graph plotter and diary.

The programs are written in Basic and each one occupies about 7K. They are linked by a header program which is used to load any one of them. There is no provision for loading one program from another; each time you want to use one of the other programs you must clear the memory and again load the header.

The 'manual' consists of two A4 sheets and contains little more than the message that the programs are self-explanatory and that demonstration files are held on side two of the cassette — unfortunately absent on

the review copy. The header program graphically displays a desk, chair and blackboard. The instructions are displayed, unclearly on the blackboard.

The mailing list is run by a seven-option menu which allows names, addresses and telephone numbers to be added, deleted or listed. Despite seven options the prompt on the bottom of the screen is to press keys 1 to 6.

Adding a name is easy: select option

continued on page 104

continued from page 103

1 and type in the name and address, remembering to separate the different lines by a colon. The program tells you that you may only use 60 characters but the manual quotes 100; neither mentions that you are further restricted in the number of characters per line or that a name and address must contain at least one colon.

Deleting and listing a name can be done by specifying either the record number, the name or the road. Your choice in naming files which you want to save is restricted to giving a number from 1 to 9. The program prefixes it automatically with "M.list:".

The word processor is woefully inadequate for nearly every use which can be imagined. It is run from a menu with seven options which allow text to be entered, printed, saved, loaded, wiped or displayed on screen. The seventh option clears both program and data from memory.

As new text is entered the last two lines only are displayed. ENTER is used, as usual, to start a new paragraph, but is only shown as a special character — a reverse arrow — in the text. Text can be inserted at any point by using CAPS SHIFT 1 to move to the required line, inserting a number

of blank spaces and then typing in the text. Excess blanks can then be deleted using CAPS SHIFT 0.

The graph plotter can draw bar charts, line graphs or both together with up to 30 — though the manual says 32 — values or columns. Before the data is entered the screen colour, number of values, maximum and minimum values and a title must all be entered. The program then prompts for each value in turn, checking to make sure that it is within the specified range. As it is entered the value is plotted. Although the program is easy to use there are several major omissions, including the ability to edit data once it has been entered. That entails having to start afresh every time you make a mistake.

The diary is probably the best of the four programs. It enables you to make an entry for any date in any order. The entries can then be recalled by date or by listing them for a particular month. A list of the dates for which entries have been made can be displayed and the usual save and load functions complete the options.

Making an entry into the diary involves entering the date. The only error trapping seems to be on the year, where two digits must be entered. In

all cases any mixture of two numbers and/or letters is acceptable. The entry to the diary is typed in normally with the only restriction on size being the amount of memory left.

When a date is entered, even one which does not exist, the program checks to see if an entry for that particular date has been made. If so, then it prompts for you to take the "recall an entry" choice and add the extra information.

Electric Office is a set of programs which could be useful but has been written and presented very carelessly. Of the four programs the diary is the best and is possibly a better word processor than the dedicated one. The mailing list can have few practical uses since the names cannot be merged into letters produced on the word processor. The graph plotter is easy to use but requires data preparation beforehand; care is necessary to ensure the data is entered correctly.

SHOP WINDOW

SHOP WINDOW IS a regular service to Sinclair User readers to enable you to publish details of specialist programs with limited markets. Details of such programs will only appear once in Sinclair Business User, at no charge. If readers would like details to appear regularly they should advertise in Sinclair Supermart.

Computer Estimating Versatile program for use by any section of industry who prepare multi-item tenders containing rates built up from component parts and/or part use of subcontractors quotes. Can cope with up to 300 items. 48K Spectrum. SAE to A Macdonald, 8, Loch Place, South Queensferry, West Lothian.

Duplicate Bridge Computer scoring for the Spectrum 48K. Allows for up to 36 boards and from 4 to 250 teams, as well as catering for Howell, Mitchell or individual competitors. The program checks the scores on each hand and gives cumulative totals to date and instantaneous final placings, which can be copied to your printer. £25.00 from R F Wheen, The Grange, Rectory Lane, Buckland, Betchworth, Surrey.

Occurance Chart. Spectrum 48K. A histogram program

to record and store four years of events in monthly charts. Each block of the bars can contain any character, including user-definable, so differing events can be identified. Colour, sound, user-definable key and print-out options are included. Suggestions for use: weather, test results, crime and accident records, sales figures, sickness reports, bird spotting. £5.00.

Telephone charge. Spectrum (16K and 48K). Automatically records a running cost whilst you make a telephone call, with digital clock, time elapsed, name of caller, and date. £4.00.

Questionnaire. Spectrum 48K. Easily-entered results from a questionnaire with three answers for each question. Displays results in table form and histogram, with two lists for additional suggestions. Allows for four classes of persons' answers to be compared. Initially set for 60 questions, with printout facility. £4.00.

Box Flow Chart Designer Spectrum 48K. With vertical scrolling. When completed the chart can be used one box at a time with the ENTER key for lectures, or automatically for continuous displays. Will make 400 entries, as one or more charts. £5.00.

All programs are available from B M Wornham, 20 The Parklands, Droitwich, Worcs. WR9 7DG.

Sail Racing. A range of seven microdrive-compatible Spectrum programs which cover all the calculations required for handicapping, corrected times, performance indicators, series racing, with a database covering membership of a sailing club. £6.50 each inc. p&p from John Caine, 4 Birch Hill Avenue, Onchan, Isle of Man.

News from the world of
Sinclair QL computing.

QL

NEWS

One year old... and look how we've grown!

When we launched the QL last year, we knew we were starting a revolution.

For the first time, the serious computer hobbyist could afford the same power and performance as the professional computer user.

A year later, and the QL is more than a unique computer, it's the heart of a unique system.

And the next 12 months promise even more for QL owners... new software options, extra storage devices, printers, monitors...

Read on, and see how far we've come, and how much further we're going!

N°1

NIGEL SEARLE

Now it's the quantum leap for QL software and peripherals

Without doubt, the QL was the computer innovation of 1984. Launched to outstanding reviews, it soon gathered thousands of happy owners, and recognition from people like ICL, who have incorporated QL technology and its Microdrives into the new One Per Desk.

The quickest glance at the QL's specification shows what the fuss was all about...128K RAM, 32-bit processor architecture, 200K built-in mass storage, bundled software. They're features that would normally cost you three or four times as much!

But that's only half the story, because the QL is now the heart of a computer system, with a growing library of software...

As you'll see from these pages, 1985 is the year of the quantum leap for software and peripherals. Already there are no less than five QL languages together with special programs for software developers, a world-beating chess game... and much more on the way!

On the hardware side, there's a special QL monitor to make the most of that high-resolution 512 x 256 pixel display. There

are memory expansion boards, Winchester disk drives, printers, and low-cost Microdrive cartridges.

In fact, there's so much going on, we'll be running these regular Newsletters just to keep you in touch!

If you already own a QL, the next few pages will give you a taste of the exciting year ahead.

And if you don't... take a look at what you're missing. It should be all the persuasion you need!

Now read on...the quantum leap into serious computing starts here.

Nigel Searle, Managing Director, Sinclair Research Limited.

From sophisticated business packages to superb animated games... QL software makes the most of the computer's extraordinary specification.

New QL Software

Utilities, languages, games and business packages...with more on the way!

Two things are now certain about QL software. First, there's going to be plenty of it. And second, it's going to set completely new standards for microcomputers...

At the moment, there are well over 100 software programs in development. And the first

software releases, shown here, demonstrate how exceptional the best QL software will be.

The QL already has five languages, superb programs for software developers, a top quality accounting package and in QL Chess it has its first game.

QLUB: 10,000 members and growing!

QLUB is the special Users Bureau for Sinclair QL owners. There are now well over 10,000 QLUB members, and membership is growing all the time.

For their annual subscription of £35, QLUB members are enjoying a whole range of information and advisory services, exclusive offers and special discounts.

One of the most important QLUB benefits is the special news magazine, appearing six

times a year. The magazine provides a forum for QL owners to exchange views and keep in touch with all the latest developments.

Each issue is packed with updates on QL hardware and software, tips on applying the four QL Programs, and news of how other people are using the QL. QLUB members also receive a range of special discounts, with savings of at least 20% on selected software products.

Current special offers include:
 QL Chess for £14.95
 QL Toolkit for £19.95

QL Assembler for £31.95
 QL Cash Trader for £54.95
 Special subscription rates for Personal Computer News and QL User.

The multilingual Sinclair QL

BCPL – a forerunner of C, BCPL has been described as a systems programmer's delight. In the words of QL User, this compiler is a 'brilliant compromise between a high-level language and a low-level systems language'. Whilst not for beginners, this is an essential buy for anyone with a good knowledge of systems programming. Complete with manual.

Available from
Metacomco – £59.95.
Tel: 0272 428781.

LISP – already well-known for its artificial intelligence appli-

cations, LISP is a powerful and versatile language. This is a sophisticated implementation of LISP, by one of its leading exponents, Dr Arthur Norman. This package features full QL graphics, and a full manual is supplied.

Available from
Metacomco – £59.95.
Tel: 0272 428781.

Pascal – probably the most popular high-level language of all. Pascal is particularly well-suited to structured programming sophisticated data manipulation and algorithmic problems. Pascal interpreter complete with 87-page manual.

Available from
Computer One – £39.95.
Tel: 0223 862616.

Forth – this 'new generation' language is proving both popular and easy to learn. The program provides a full implementation of the latest Forth 83 standard with graphics and sound extension.

Available from
Computer One – £29.95.
Tel: 0223 862616.

APL – the compact mathematics-based interpreted language designed for scientists and mathematicians.

APL keyword interpreter complete with manual.

Available from
MicroAPL – £99.95.
Tel: 01-622 0395.

Programmer's packs

QL Assembler – two programs operating in tandem. The first is a full-screen editor for creating and altering program files. The second, a Motorola-format compatible 68000 assembler which converts source files written in M68000 assembly language into machine code files which can run on the QL.

Both assembler and editor are written in machine code and can be multi-tasked with SuperBASIC, so you can switch

between editor, assembler and SuperBASIC instantly.

Written by GST Computer Systems – £39.95.*

QL Toolkit – a programmer's toolkit with over 70 programs and extensions to SuperBASIC. Most are linked to SuperBASIC initially and can then be used from commands or from within a program. Enhancements include printer spooling (print a file while running a SuperBASIC program); improved file access (with full random input/output command); job control (allows management of multi-tasking programs including the ability to display, alter priorities, and delete jobs from the QL); and SuperBASIC screen editor.

Written by Q Jump – £24.95.*

World-beating chess!

QL Chess – fresh from its victory at the World Microcomputer Chess Championship. This program sets a completely new standard for games software.

There's a high resolution display, animated 3-D graphics, and 28 levels of play from novice to champion. Features include an openings book of nearly 4000 moves, HINT and TAKEBACK functions that help you learn from your mistakes, and the option to play a human opponent or the computer.

Written by Psion – £19.95.*

Software at work

QL Touch 'n' Go – a unique approach to learning touch-typing skills. The program is designed to give you mastery of the standard QWERTY keyboard in just 24 hours. With practice, you should soon reach 40 words per minute, with over 95% accuracy.

Written by Harcourt – £24.95.*

QL Cash Trader – a unique computerised book-keeping system for small businesses. The program provides a complete course in the principles of accountancy, and goes on to become an essential aid in the day-to-day running of a business. Complete with comprehensive manual.

Written by Accountancy Software of Torquay – £69.95.*

*This title is available from Sinclair Research on 0276 686100, and selected Sinclair stockists nationwide.

Psion troubleshooting service

All QLUB members can obtain special assistance from Psion on using the QL Quill, Abacus, Archive and Easel programs supplied with the computer. Psion will normally answer any queries within 48 hours.

Free updates

QLUB members will also receive one free update of each of the four QL Programs – incorporating many new developments.

New QL Hardware

An industry is born

From the moment of its launch, the revolutionary QL attracted massive interest from all quarters.

In one area, the interest quickly turned to action, as high-tech hardware manufacturers realised the immense potential of the QL for vast expansion, for system development and for

widespread networking. Already the list of peripherals for the QL is very exciting – and lengthening by the day!

Here, we've covered many of the latest, most important developments.

As more appear, be sure to keep in touch with QL News!

The dedicated Sinclair Vision QL monitor

Once you see the incredible graphics capabilities of the QL you may decide an ordinary TV just can't do them justice.

If that's the case, a high-resolution monitor is needed. (And if you're creating presentation-quality charts, for example, it's quite essential.)

The new Vision QL monitor is specially designed for the computer by Kaga Electronics, with full support from Sinclair Research.

So it exploits the QL's maxi-

mum 512 x 256 pixel resolution to the full, with a pin-sharp 85 column display.

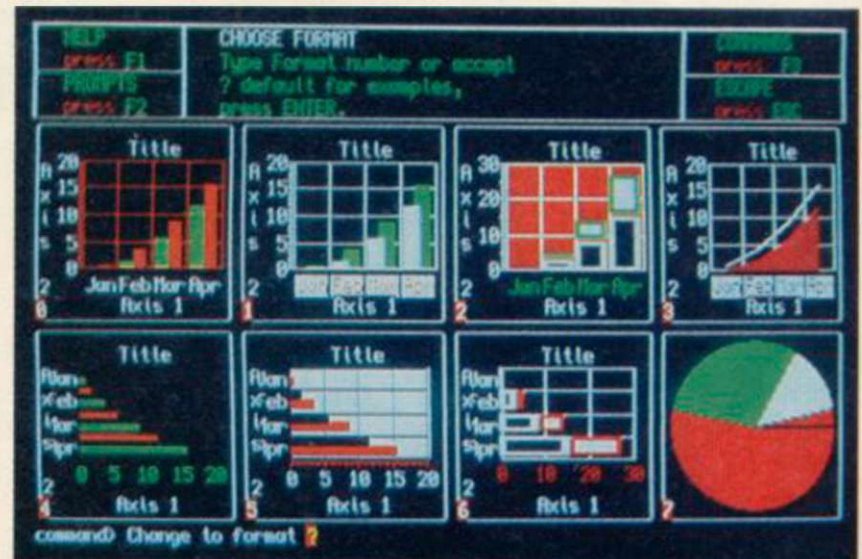

It's also specially styled to suit the QL – in looks, and in use. There's a 12" non-glare tube, and etched screen to diffuse reflections.

So the display is bright, sharp, *much* easier to look at... and invaluable for those late-night programming sessions!

And like the QL, the Vision monitor is designed with space in mind: it has a compact foot-

print of just 12½" by 15" – no more than a typical portable typewriter.

It's available from MBS Data Efficiency on 0442 60155 and selected Sinclair stockists.

The QL's superb graphics capabilities – as demonstrated by the Sinclair Vision QL monitor.

Microdrive cartridges. Now only £1.99!

Microdrive cartridges are the QL's own unique storage media. Each stores up to 100K of information, on a cartridge no

bigger than a matchbox!

Over 500,000 cartridges are now being used throughout Britain. And QL Microdrives

themselves are standard equipment on the new ICL One Per Desk micro.

Now there's more good news for QL enthusiasts: from February 1, the cost of QL Microdrive cartridges are down from £4.95 to £1.99 each!

Sinclair Microdrive cartridges – up to 100K of programs and data on a medium so compact you can pop it into your pocket.

Powerful hard-disk system

For the QL business user, the new Firefly QL Winchester disk will boost the QL's power in one huge leap.

Designed by Quest, it uses CP/M and offers all the benefits of Winchester technology: fast access, reliability, compact size and quiet operation.

With 7.5 Mb storage, the Quest Firefly is ideal for large databases such as stock or cus-

tomers lists. And at under £1,200, it represents exceptional value for money.

The Firefly will be available very shortly from Quest on 04215 66488.

Winchester hard disk drives supplement your QL's built-in mass storage.

Interface options

The QL comes complete with two built-in RS-232C interfaces.

In addition, interfaces for Centronics printers are widely available from manufacturers such as CST, Miracle Systems and Sigma Research . . . with

prices from only £35.

And that's just the beginning. For attaching scientific and laboratory instruments to the QL, CST even offer an IEEE-488 interface, which can handle up to 16 connected devices simultaneously!

A Centronics interface slips discreetly into place.

Expansion boards for up to 4 times more memory!

Also from Quest, a simple and inexpensive way to expand the QL's RAM: with memory expansion boards.

These compact units connect to the standard QL expansion port, using the QL's internal power source or, for larger boards, an external power source.

The units range from 64K and 128K RAM boards to massively powerful 256K and 512K RAM boards, so there's something for every user.

Compact expansion boards.

Prices start at £117, and the 512K board is a very cost-effective investment at just £587.

With affordable memory like this, the QL is more than a match for any other micro under £2,000!

The spec behind the spectacle

CPU – Central Processing Unit
Fast, powerful Motorola 68008 chip. A second processor, an Intel 8049, controls the keyboard, generates the sound, and acts as an RS-232C receiver.

RAM
128K. Now expandable to 640K.

ROM
48K.

Operating system
Qdos – revolutionary single-user, multi-tasking, windowing operating system.

Storage
Twin built-in QL Microdrives. Up to 100K storage each – transfer rate, up to 15K per second.

Keyboard
Full moving 65-key QWERTY, five function keys, four cursor keys.

Language
Sinclair structured SuperBASIC.

Application software
QL Quill – word processor
QL Abacus – spreadsheet
QL Easel – graphics
QL Archive – database

All four packages supplied with the QL.

Interfaces
Two serial RS-232C interfaces, Microdrive expansion port (up to 6 may be added), ROM cartridge port, local area network, 2 joystick ports, RGB monitor and TV output.

Text screen
Various modes – up to 85 columns by 25 rows on monitor. On TV, up to 60 columns.

Graphics resolution
512 x 256 pixels (four colour),
256 x 256 pixels (eight colour).

**The Sinclair C5:
Is it reliable?
Is it even safe?
Chris Bourne on
Clive's dream car**

PEDAL-POWER THE HI-TECH

THE SINCLAIR C5, a 99lb battery-powered, one-seater tricycle with a white plastic body, seems set to create more noise in the motoring world than John De Lorean and the BL Maestro rolled into one.

There was much advance speculation about the machine, and Sinclair staff remained tight-lipped to the bitter end. A few spectacular leaks proved more or less accurate, but the extent of the marketing support from such worthies as Woolworth and the Electricity Council was a surprise.

The original design was expected to involve radically new battery technology, as a previous problem facing electric car designers had been the construction of a battery powerful enough to drive the car but light enough for the car to carry.

The C5 does not provide anything new in that area, but uses a 33lb lead-acid battery, based on existing car batteries. When you consider that the rest of the machine weighs only twice as much, you realise the sacrifice a conventional battery entails.

Unable to produce a radically new battery design, the designers chose to create a lightweight vehicle to suit existing technology. With the aid of Lotus, the British sports car specialists, a sleek body was designed. Steering is through handlebars situated beneath the thighs, with brakes similar to cycle brakes. The accelerator is a button on the handlebars, and there is no reverse gear.

In order to get the thing moving, pedals are provided, but on a dry level start we found that only a couple of revolutions were needed before the motor cut in. The pedals are also required when driving up steep hills. The motor delivers a maximum speed of 15mph. The battery has a range of 20 miles, according to Sinclair Vehicles, the company set up to handle the

manufacture of the buggy.

Overall, it measures 2'6" wide, 2'6" high, and 6'6" long. There is a boot of one cubic foot capacity, enough for a very small shopping load, a few school textbooks or a flimsy party costume. We were unable to squeeze an executive briefcase in. Two lights, one at the back and one at the front, along with a futuristic Liquid Crystal Display, complete the basic package, at £3⁹ mail order in a tough cardboard box. It may be more fun than a QL, but is it safer?

Taking advantage of a change in the law in 1983 designed to help disabled drivers and milk float manufacturers, the C5 was carefully designed so that anybody over 14 years old could drive it, without insurance, driving licence, road tax or crash helmet, and even if they had already been disqualified from driving a car in the courts. It is classed as a pedal-assisted tricycle, and it is probably fairest to think of it as an alternative to mopeds or bicycles rather than a serious challenger to the conventional car.

Safety organisations have already voiced concern about the C5. The

Royal Society for the Prevention of Accidents — RoSPA — was commissioned by Sinclair Vehicles to write a booklet on driving the machine safely. That booklet, provided with the C5, was compiled by Howard Boyd, RoSPA's National Cycling Officer. It warns of the danger caused by the low height of the machine, which means lorry-drivers and less alert car drivers may have difficulty spotting it.

If you buy the C5 in its basic form, you will not get wing mirrors, indicators, or a horn. Those accessories may be bought as an extra from Sinclair Vehicles, along with a high visibility mast to attach to the car. RoSPA regards such items as essential for safety, particularly the mast. Those cost £143, and together with insurance, spare battery and delivery the full cost of the C5 is around £600, rather more than the £399 quoted.

Bill Nichols of Sinclair Research says it was never the intention to hide such costs to the user, and points out that "none of those items is legally required." However, the issue at stake is not the legality of the machine, or even its structural stability. "We are

BEHIND TRIKE

satisfied that it is not inherently unsafe" says Geoff Large, RoSPA's assistant director for Road Safety, with a subtle use of the double negative.

What is causing the most concern is how well the C5 will fit in with current traffic conditions, and whether conventional motorists will treat C5 drivers with due respect on the roads. There are training schemes for cyclists and motorcyclists, and saturation advertising to warn motorists of the problems faced by cyclists. So far there is nothing similar to support the vulnerable C5 enthusiast.

The first people to test the C5 in normal traffic will be the customers. Because of the secrecy surrounding the production of the machine, the

only tests conducted on public roads have been held at night with little traffic about. That is a completely different environment to a busy high street full of frustrated motorists, pick-up trucks, vans, buses and taxis.

In spite of reservations, RoSPA does not believe the C5 should be banned. Geoff Large feels that, with the visibility mast, the C5 scores over bicycles for its stability. "If people change from cars to C5s that would be a positive gain for road safety in reducing the traffic load," he says, "but as an alternative to public transport there would be a problem, as there would be no change in the growth of car owners."

Of the design itself, regardless of safety considerations, reaction has been kinder. We found it great fun to drive, and the low height gives an added impression of exhilarating speed. According to Sir Clive, the polypropylene body is incredibly tough. "Hit it with enormous force," he says, "and it just bounces back".

Although the C5 performed well on the level concrete of Alexandra Palace, test models driven at the launch expired halfway up Muswell Hill, and there were reports of at least one early C5 pioneer finding himself stranded four miles out of Streatham on his way to work. The problem appears to be with the battery. Does it work or not?

There are three factors involved, according to Bill Nichols, which can make the battery's performance seem less than impressive. Firstly, when you buy a C5 you must recharge the battery before you set off. There is considerable power loss if it is left sitting around for a long period of time. It takes about eight hours to recharge on the domestic mains, so serious owners will want at least two batteries.

Secondly, the C5 requires a new technique of driving, dubbed 'push and coast'. The temptation is to keep your finger firmly on the accelerator button at all times, but that drains the power swiftly. What you should do is give a burst of power, then coast along for a bit, then give another burst. Bill Nichols claims effective use of that technique may push the range well beyond the stated twenty miles. Of

course, if you don't use the motor at all, you can keep going until your pedals drop off.

The third point, not mentioned in the brochure, is that of weather. Apparently the battery loses 8-10 per cent of its efficiency at zero degrees, and more below freezing. "That was a problem in launching it at this time of year" says Nichols.

While the pundits mutter, the public appears to be ready to give it a go. Sales in the first week were fast approaching 1000, according to Nichols, with only "four or five complaints so far." At present it is only available mail-order, but Sinclair says it will be appearing in high street electrical stores later in the year. There is a possibility of Woolworth stocking it. It is already on view in selected Electricity Council showrooms, but not for sale or trial.

It is right and proper that a machine which can be driven by an untrained fourteen-year-old should be subjected to as severe a criticism as can be justified. Design faults in a Spectrum are not going to kill anybody: design faults in a car might well do so.

But it is worth remembering that Sir Clive has yet again demonstrated his commitment to entrepreneurial risk-taking in no uncertain fashion. Whether the C5 will catch on, either as a toy for rich kids who don't mind looking silly, a novelty at amusement parks, a motorised golf caddy or a genuine new means of urban transport, does not affect that fact.

Sir Clive may seem an unlikely candidate for the Henry Ford of the 80s but if nobody ever took those risks, we would still be riding horses. There is a lot to praise in the C5, and many questions which only experience can answer in full. In the meantime, you have to admire his nerve.

■ A wealth of Peripherals for your Spectrum! ■

By RICK BRAVO

Since the 48K Spectrum was launched the opportunities it offered has attracted peripheral manufacturers throughout the world.

One of these manufacturers was bound to emerge as the "brand leader" and in the case of the Spectrum this turned out to be DK'tronics. The company is based in Saffron Walden in Essex and proudly boasts a history dating back to the ZX80. All the company's products are manufactured in England at their own factory and they have now established themselves as world leaders, exporting to over 30 countries.

Below you will find a review of their range which now includes over 16 products, all of which are available for the Spectrum and Spectrum + models.

Keyboard

The DK Microdrive Compatible Keyboard is the best selling keyboard in the world and is now used by around 10% of all U.K. Spectrum owners. It is microdrive compatible and offers more key functions than any other keyboard in its price range. The stepped keys and space bar make it even easier to use. It is constructed from high density black ABS and has 52 keys and a full width space bar. A separate numeric keypad of 12 red keys including single entry 'delete' plus single entry 'decimal point' facilitate fast numeric data entry.

From good computer shops everywhere at only £37.50 or direct from DK'tronics, add £1.50 post & packing.

Dual Port

This highly successful Light Pen for the Sinclair Spectrum plugs neatly onto the rear of the Computer or the rear of the printer connector. The operating software now runs faster and supports 16 pre-defined instructions. You can change all the colours (Border, Paper, Ink), draw circles, arcs, boxes, lines and insert text onto the screen (ideal for diagrams etc.) Save & load completed or partly completed screens onto or from the tape.

There are also features to draw Free Hand and animate on the 48K Spectrum, you can retain and animate 5 screens.

You can also use the machine code on its own in your own programs for selecting out of a menu, playing games etc. All entry points necessary are given. The Pen works down to pixel level with pixel accuracy.

From good computer shops everywhere at only £19.95 or direct from DK'tronics, add £1.50 post & packing.

The first port simulates 6,7,8,9, & 0 Keys. The second port simulates in (31) command.

The port will accept any Atari style joystick. It will run any software. That is:-

- (a) Using Keys 6,7,8,9 & 0.
- (b) Having redefinable key instructions.
- (c) Using in (31) (i.e. Kempston).

This Dual Port interface interconnects with the existing range of DK'tronics products to form the most comprehensive range of Spectrum peripherals available from any manufacturer.

From good computer shops everywhere at only £13.00 or direct from DK'tronics, add £1.50 post & packing.

3 Channel Sound Synthesizer

Any microcomputer is capable of manufacturing sound, however, in order to produce a single octave 'C' note with a frequency of 8372Hz the signal needs attention over 16,000 times per second.

To produce software capable of performing just this one task would be difficult if not impossible, especially when you consider that to produce arcade type sound effects requires even greater attention.

The production of these sound effects without the constant attention of the processor is now possible thanks to the AY Sound Chip, its flexibility makes it essential for a wide range of applications including music synthesis and sound effects generation, continuing the monitoring and production of sound after the initial command.

More often than not realistic sounds require more than one effect and this function is provided by 3 independently controlled channels, as an example compare the sound produced by the single note of 'C' with that produced by the chord 'C' and you will know just what I mean, likewise producing the sound of an explosion using all 3 channels gives games a totally new dimension.

Add to this the ability to alter the pitch tone and shape of the sound you have produced and it's flexibility is unlimited. In simple terms, imagine the note you have produced as a calm sea, by altering the pitch and shape you can produce waves, the top of the wave corresponds with the maximum volume and pitch of the note, which like the wave itself rises and falls.

Programmable

At last! A fully programmable joystick interface with feed through connector that really works!

Now you can run ANY software from ANY supplier with the DK'tronics fully programmable joystick interface. It comes complete with machine code software and can be programmed in seconds to give full 8 directional joystick movements plus five capabilities and will accept any Atari/Quickshot type joystick. A catalogue is now available showing the full range of products available from DK'tronics the world's leading Spectrum peripheral manufacturer. The through connector enables other add-ons to be plugged into the rear.

From good computer shops everywhere at only £22.95 or direct from DK'tronics, add £1.50 post & packing.

Speech Synthesizer

The speech synthesizer uses the popular SL0/256 speech chip and has an almost infinite vocabulary. It is supplied with a text to speech converter for ease of speech output creation. Everything you wish to be spoken is entered in normal English, without special control codes or characters, it is therefore extremely easy to use. The voicing of the words is completely user transparent and the computer can carry on its normal running of a program while the speech chip is talking.

Although there are only 26 letters in the alphabet, letters have a totally different sound when used in different words. For example, the 'a' in Hay is much longer and softer than in Hat. When you speak you automatically make adjustments because you know just how a word should sound. Not quite so easy with a computer. After looking at other speech synthesizers we decided that it was essential that the DK'tronics Spectrum Speech would offer a simple system that would enable the user to produce realistic speech that was instantly recognisable.

The solution to the problem was extremely complicated, it required hours of programming to enable the computer to look at the individual letters that make up each word and compare their relative position to each other before deciding on the appropriate sound.

I consider this to be the best Spectrum Speech Synthesizer on the market. From good computer shops everywhere at only £24.95 or direct from DK'tronics, add £1.50 post & packing.

Centronics

The new Dk'tronics Parallel Centronics Interface will link your Spectrum to any printer with a standard centronics input. As the choice is vast, you can select the printer exactly suited to your needs.

Features of the interface include: Runs all parallel centronics type printers: Controlling software fully relocatable; Interfaces with any software using the printer channel e.g. Tasword Dev Pack etc; LList Lprint recognised. High res screen dumps; All control codes allowed through to printer; Fully microdrive compatible.

Supplied with full instructions and controlling software. From good computer shops everywhere and sensibly priced at only £39.95 or direct from DK'tronics, add £1.50 post & packing.

The Complete Machine Code Tutor

SPECTRUM 48K · COMMODORE 64 · BBC MODEL B · 32K ATARI

Trust New Generation to strip the mystery away from Machine Code. Now the Complete Machine Code Tutor makes learning machine code simple so there's never been a better time to discover the really great benefits of machine code programming - see what the press says.

“A colourful, clear, interactive computer teaching package - the best I've come across in any field.”
Jan Watterson - Popular Computing Weekly

“This pair of tapes forms a worthy addition to the range, giving a thorough exposition from the most elementary level of machine code programming on the BBC Micro.”

Which Micro & Software Review
“The best machine code tutor and no serious Spectrum programmer should learn machine code without it.”

Crash
“By far the best attempt comes from New Generation Software who has recently issued its Complete Machine Code Tutor for the BBC and the Spectrum.”

Popular Computing Weekly
“New Generation have got a very nice product here. It's well thought out, easy to use, aesthetically pleasing, and (as far as I could tell) bug-free and crash-proof.”

“Overall then, an excellent idea, well executed.”
Computing Today

Supplied with full notes, this package teaches machine code the way it should be taught - at your own pace and actually from the microcomputer, not from a book. You learn programming the professional way, plus a few tricks of the trade. Available from all good computer stores at £14.95.

New Generation products are sold according to their terms of trade and conditions of sale. FREEPOST, Bath BA2 4TD. Tel: 0225 316924

Selected titles of New Generation Software are available from your local computer store and larger branches of:

THE PUNTER'S PAL COLLECTION

"Yours is far superior to any other tapes I have tried."
 Mr D. Walker, Brighton.

STARTER'S ORDERS: The Original and best horse race predictor. (67% winners on top tips with very good SP's).

Whilst the vast majority of punters had a bad flat season. Users of **STARTER'S ORDERS** enjoyed over £150 profit to a £1 level stake on each day's 'nap'. (Compare this to newspaper tipsters.) Already after three months of the NH proper the program shows over £125 profit on 'naps' to a £1 level stake.

All the computer need know is the name and 6-figure form of each horse in a race. (Found in any daily newspaper.)

Just one program to predict on both NH and flat.
 No experience of horse racing is necessary to use the program.
 No tedious updating of databases.

The only horse race predictor with a brand new dual and straight forecast and tri-cast facility. In three months correct tri-casts have paid 360-1, 211-1, 105-1, 102-1 plus many others below 100-1.

ONCE YOU HAVE THIS PROGRAM, THE ONLY THING IN DOUBT IS THE STARTING PRICES OF YOUR WINNERS!

HARE'S RUNNING: A successful and easy to use as **STARTER'S ORDERS** but for use on greyhound races.

If in doubt of the authenticity of the above, telephone on Saturday, March 2nd and 9th between 9 am and 1 pm for the day's best bet plus the TV Nap.

the Gremlin Gang*

MONTY, the hero of the best-selling **Wanted: Monty Mole**, is languishing in jail. The sequel, **Monty is Innocent**, casts you in the role of Monty's friend Sam Stoat. You have to rescue Monty, who has been unfairly convicted of borrowing a bucket of coal.

A 48-screen arcade adventure, **Monty is Innocent** requires you to break into Scudmore prison, find the cell holding Monty — it changes every game — get the correct key from the governor's office and escape with your black velvet friend. Easy? It might have been, but for all the horrors you will meet along the way, such as skeletons, the mad axeman, or the dead-end solitary confinement cells. You will also need to find guns and invisibility potions along the way. After a few hours of **Monty is Innocent**, Wormwood Scrubs can hold no terrors for anybody.

Gremlin Graphics is providing 50 copies of the game for the lucky readers who win our equally fiendish competition. As a bonus, the first 10 will also be made members of the Gremlin Gang, the company's software club which provides a newsletter about Gremlin Graphics, the opportunity to swap ideas with other members, and exclusive club offers. Club members will also get a special certificate, the amazing Gremlin Gang sweatshirt, and posters of **Wanted: Monty Mole** and **Suicide Express**.

All you have to do to win **Monty is Innocent** is solve the maze opposite. After all, no self-respecting Molebuster would attempt a jailbreak without a bit of practice first. There are five cells — A, B, C, D and E — and Monty is in one of them. You must also pick up one of each object — potion, gun and key — as you go. Beware of the secret alarm system: it will be activated as soon as you walk down a path already travelled. So visit the gun, potion and key once

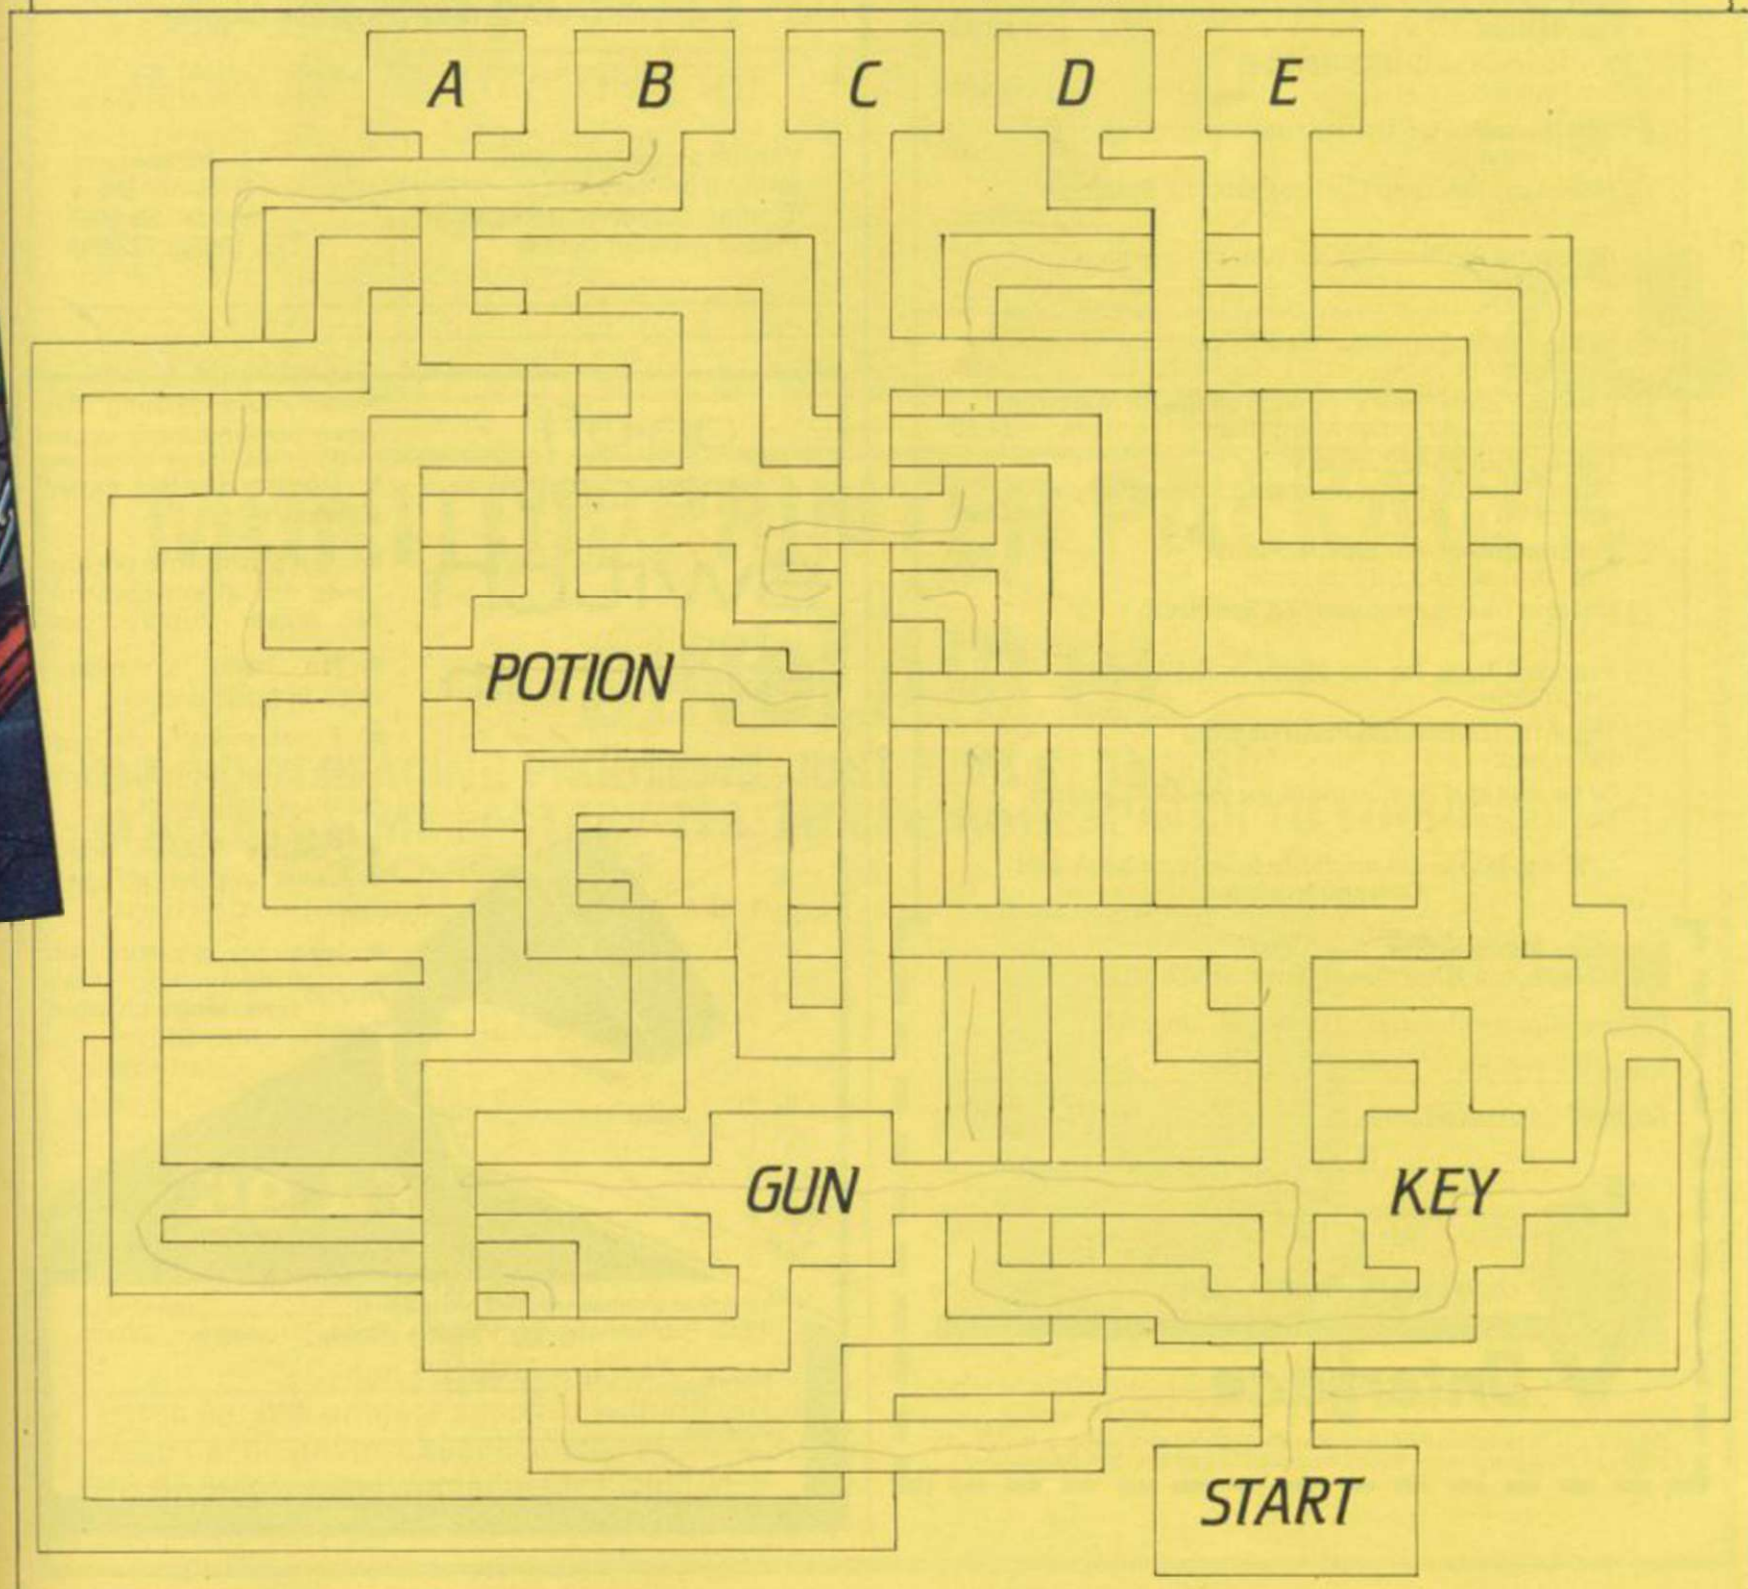

only, and do not pass the same way twice.

There is only one cell you can reach while obeying those rules, and luckily that is the one holding Monty. When you have discovered the route, write the letter of the cell on a postcard along with the objects *in the order in which you found them*. You must have everything correct in order to win.

Postcards must reach us by Friday March 22, 1985. Address your entry

to: Monty Competition, *Sinclair User*, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU. Make sure you include your name, address and telephone number on the postcard. The first 50 correct entries selected after the closing date will decide the winners.

Employees of EMAP and Gremlin Graphics, their friends and associates, are not allowed to enter the competition.

Interactive BASIC Programming for 48K ZX Spectrum

WHO'S THE SLAVE: YOU OR YOUR SPECTRUM?

You probably bought your ZX Spectrum in order to find out about computing (remember?). But the manual isn't easy to follow and programming books are not much better. What's the best way of learning how to ride a bike or make furniture or program a computer? The answer is: do it. Reading books is never as good as practical experience.

Now you can learn ZX BASIC programming with your Spectrum. 'Interactive BASIC Programming' is a unique package of twelve Learning Modules, (we didn't cut down to one unintelligible program!). Look at these features:

- * Plain English (yes, real English not jargonese).
- * You have complete control over Spectrum BASIC. So you can write, save and load programs while using 'Interactive BASIC Programming'.
- * All ZX BASIC is covered.
- * You'll learn about graphics, colour, sound, motion, strings, arrays, underlining words, writing on the lower half of the screen, system variables, menus, loops, characters and much more, explained simply.
- * More than a hundred problems with hints and answers in the form of programs that are put into BASIC for you to look at, run and change.
- * You'll learn how to write your own games (by way of examples) and how to put your machine to serious use.
- * There's no manual (!): everything is explained by your Spectrum.
- * The package has been written by a computer science teacher
- * Low price, excellent value.

If you want your 48K ZX Spectrum to teach you BASIC then send £9.95 to:

EIGEN SOFTWARE create reality

Giving a monster a mind of its own

Produce intelligent characters with the
second part of John Gilbert's series

THE STORY so far. Last month we looked at how to plan an artificially intelligent adventure, plotting storylines and mapping them into Basic routines.

Our example plot concerned the theft of the Crysan clock, an atomic timepiece which keeps the universe running, from a marine institute off the coast of Florida.

Kagan, the moderator of the institute, and two researchers, Marla and Morris, board a sea launch and search

for the yacht in which the purloiners escape.

This month we consider the attributes used to build artificially intelligent characters and see how they can be used to create life on the Spectrum and QL.

Character construction consists of three phases or parts. Those are conception, modulation and interaction. The last two are inter-connected. Interaction, which includes communication, will inevitably change a charac-

ter's actions — the province of modulation. Any change in attitude, resulting from an alteration to a character's attributes in the modulation phase, produces changes in the way in which characters see the world and behave towards others.

One character's creation and manipulation influences the movement of other characters and objects within the adventure world. For instance, depending upon how brave a character is feeling, an object may be picked up

within the Delta Class Yacht in our adventure. If that object is taken another character may suffer because a food source or weapon is not available at the appropriate time. For that reason movement is considered as one of the main aspects of writing AI adventures and will be discussed in detail in a future article.

The process of character conception is simple to describe but can be made as complex as a planned adventure requires. We can stay on familiar ground, at least for the present, and look at the types of general characteristics used by most games and then home in on the specific requirements of *The Crysan Incident*.

Role-playing games, such as *Dungeons and Dragons*, all use remarkably similar attribute systems. They include Strength, Intelligence, Dexterity, PSI, and Attack Points. Strength and Intelligence show the physical well-being and mental powers of a character, while Dexterity indicates how agile he or she can be. The PSI attribute usually represents magical powers of the mind and is used in combat with demons. Attack Points are used in battle and represents the number of blows a character can receive without being injured.

You can see that such characteristics are best suited for games in which battles are the order of the day or night. They are not ideal for adventures where more subtle interaction is required. They do not describe the inner qualities of a character's persona.

In our adventure we need reactions within the characters which spring from fear, hate, pain or any of the other expressions associated with life. There are four characters involved in this month's instalment in which the research team discover the missing yacht beneath the waves.

While one of the researchers — Morris, say — remains on board the launch, the other two — Kagan and Marla — don scuba gear and plunge into the depths.

They are not prepared for what they meet — two creatures related to the squid family, Genghis and Boreel. Those are slow in body but have excellent reasoning powers, they will not engage in fighting, or continue a battle, without a good chance of winning. Behind them lies the wheelhouse door of the submerged yacht.

The general attributes which can be used for each of the characters are

Attribute	Changeability	Range (+10/-10)
Emotional	X	stable/unstable
Stress	X	capable/incapable
Strength	X	strong/weak
Intelligence		genius/moron
Ego	X	inflated/deflated
IQ		high/low

Figure 1. General attributes

shown in figure one. Those marked with an 'X' will change throughout the game. The final sector of the chart shows the scales used for each attribute. Those range from -10 to +10. For instance, if Kagan's Stress mark is -5 then the next situation in which stress is involved will be handled badly by him. Mistakes will be made and strength, ego and emotion factors would be adversely affected.

The key to artificial intelligence, using attributes as sensors of ability, therefore lies in the way in which each of them is inter-related with the others. Using this system no character will ever be inherently good or evil as in many other games. It should be possible to win enemies over to your side or make enemies of friends.

Although hundreds of changes may be made to character attributes during

in figure three. You will find that when it comes to plotting the adventure you can tell at a glance how characters should react to the events and what will happen if the player-character, Kagan in this case, performs a certain action.

You could even give the player-character some autonomy where the character, and not just the player, has some say in what he or she does. That happens in listing one when Kagan may flee at the sight of a fight. Such actions are more interesting than using a lifeless puppet which exists just to move you through the game. Make a player-character rebellious and you change the nature of your games.

Once the character data has been assimilated on the chart you can start working it into your adventure. A simple scenario has been set up in

Attribute	Kagan	Marla	Genghis	Boreel
Emotional	5	-2	-3	2
Stress	4	-1	6	-3
Strength	3	2	4	4
Intelligence	7	6	6	6
Ego	6	-5	7	4
IQ	6	-6	3	6

Figure 2. Character table

a game all of them have to be set at the start. The table containing Kagan's initial attribute levels is shown in figure two.

Figure three is a progression of the one-character table and shows all attributes used in listing one. One array is used to store attributes for all the characters. It may seem confusing on paper but such an arrangement saves memory and is not so confusing when transferred to a program listing. You will only have one array to remember.

When creating your own characters it is helpful to use a chart such as that

listing one. Lines 100 to 180 set up the data in an array marked 'a'. As shown in line 120, there are four characters involved and six types of attributes. Line 130 sets up the data for the array between lines 190 and 220 and then lines 140 to 180 use loops to enter that data.

The brief scenario is described between lines 240 to 290. These are a temporary measure as there are better ways of creating a complete adventure and those will be discussed in a future article.

continued on page 124

New type	Formula
Anger	Stress/Intelligence/Strength
Courage	Stress/Strength/Ego
Cowardice	Stress/Strength/Ego
Happiness	Intelligence/Stress/Ego/Strength
Elation	Stress/Strength/Ego
General characteristics are coupled to give new, more complex, characteristics.	

Figure 3. Creating complex attribute formulas using general attributes

continued from page 123

The REM statement at line 300 introduces one of the most important parts of the listing regarding character interaction and modulation. Lines 310 to 330 look at each of the monsters and decide which, if any, guards the yacht. Ghenghis is the most powerful and holds a rusty sword which he has discovered in an old wreck. As you will see next month, Kagan or Marla can take the sword away if Ghenghis is confused. If, however, Ghenghis is not around then neither is his sword, which you may take for a blessing or a

curse.

In order to see what is happening in the 'set up monsters' section it is necessary to take those lines to pieces: — 310 — if Ghenghis has stress problems, a(3,2), or is low (-1) on the range in strength, a(3,3), or ego, a(3,5) then Ghenghis leaves the fighting to Boreel;

320 — the same is done for Boreel and if his stress, strength or ego tolerance is below -1 he will disappear and the name 'Ghenghis' will be put in the c\$ variable. The f\$ variable in both lines is used later — in line 370 — where the number of monsters around the yacht is printed.

330 — if neither monster is put in c\$ then you are free to enter the yacht as shown at line 380.

The monster modulation in the example is simple to follow but, as with everything else in the series, it can be as complex as you wish. You could incorporate hundreds of attributes in a massive array for hundreds of characters. Remember that the Sinclair machines do not restrict you to a limited number of conditions with an IF . . . THEN statement when using Basic.

Moving on to the next modulation routine, between lines 400 to 430, a similar procedure to that above is used for the goodies Kagan and Marla. This time we decide whether one of them acts the coward and swims away from the fight.

The difference lies in the type of conditional operators used. In the

The murky water clears as you and Marla travel downward toward the dark shadows which mask the yacht which you have picked up on your scanner.

Soon the yacht looms menacingly in the darkness.

One creature guards the doorway. The thought of a fight chills Kagan's blood.

He swims upward, back to the surface, leaving Marla to face the foe.

Figure 4a

The murky water clears as you and Marla travel downward towards the dark shadows which mask the yacht which you have picked up on your scanner. Soon the yacht looms menacingly in the darkness.

One creature guards the doorway.

Figure 4b

monster modulation, line 310 to 330, the OR operator is used to make it easy for one of the creatures to escape. In the goodie modulation phase the AND operator is used in the IF statements making it more unlikely that one would leave the scene. He would have to be low on stress, strength and ego whereas the monsters need only be low on any one factor to disappear.

The character data in the example has been fixed in an array. If you want to change the situation, shown in figure four, just change the character data between lines 190 and 220.

Next month we will consider how that data can be changed from within the program when the thieves show their hand and some character assassination takes place. We will take a closer look at that rusty sword and see how objects can change a scenario.

Hackers exposed!

On the trail of database crackers
We focus on the activity of the microcomputer hackers, examining the techniques they use and suggesting some ways in which database managers could improve the security of their systems.

HACKERS CHALLENGE

Win cash prizes in our competition designed to select the UK's supreme hacker.

CAD on a shoestring

A low cost circuit drafting program for the BBC micro that will give your circuit diagrams that professional look.

Spectrum screen dump software

Software that allows a faithful copy of the Spectrum's screen display to be reproduced by an Epson type printer.

Tapping into QL pipes

Unleash the communications power of the QL by making use of the versatile pipes that are a feature of the computer.

PLUS

News, reviews and features covering all the popular micros.

Electronics and Computing, the magazine that reaches the bits that other magazines don't even know about.

Place a regular order to avoid disappointment.

On sale at all leading newsagents

THE INSPIRATION for the column this month comes from a letter from Peter Green of Gravesend who writes: "I was recently given a Spectrum and I want to learn how it works. I have been reading the manual, particularly Chapter 24 on the internal workings, but it does not make much sense to me."

A computer is a machine which is capable of storing a sequence of instructions and then executing them. To do so requires a memory in which the instructions can be stored. Most home micros contain two distinct types of memory. The first type is read-only-memory — ROM — which contains the fixed set of instructions implanted in the machine by the manufacturer. The second type is random-access-memory — RAM.

RAM is the notepad of the computer. When it is performing a task it is continually looking at what is in RAM — 'reading' from memory — and altering the contents of RAM — 'writing' to memory. The notepad is not used haphazardly — different parts of RAM are used to store different sorts of information.

A Basic program entered by the user, for example, is stored in one part of RAM, whilst the variables used by the program are stored elsewhere. In Sinclair machines, the size of the notepad is limited so the machine is careful to allocate just the right amount of space required to hold a given piece of information.

Spare space is always collected in one place so that if, for example, the user wants to add a line to his program the information in RAM is shuffled along so that some spare space is used up and just enough space is created at the location at which the line is to be added.

Blueprint for Spectrum memory manipulation

Andrew Hewson investigates the memory map and puts the tick into a Spectrum screen clock using machine codes

There are 16384 memory locations in RAM in the 16K ZX Spectrum — the 48K machine has a further 32768 locations making 49152 in all. Each location can hold a single whole number between 0 and 255 inclusive and is identified by its 'address' which is a positive whole number.

Addresses 0 to 16383 are assigned to

the fixed form of memory, the ROM, and so the first address assigned to RAM is 16384. Table one shows the memory map of the Spectrum: how RAM is used starting at 16384. The display file, for example, which holds the information which is currently displayed on screen, occupies locations 16384 to 22527. The attributes, which determine the colour, brightness and so on, of the screen display, follow immediately afterwards in locations 22528 to 23295.

The first five addresses in the first column of table one are all fixed because the display file and the attributes all occupy a fixed amount of space. The fifth area is assigned to the microdrive maps. If a microdrive is attached to the Spectrum that area contains the information on the layout of the data on the cartridge.

If a microdrive is not attached, the area is not needed in which case the sixth area, channel information, lies immediately after the fourth, the sys-

Starting address or system variable name	Location of system variable	Memory contents
16384	—	display file
22528	—	attributes
23296	—	printer buffer
23552	—	system variables
23734	—	microdrive map
CHANS	23631	channel information
PROG	23635	Basic program
VARs	23627	variables
E-LINE	23641	command/line being edited
WORKSP	23649	data being INPUT
STKBOT	23651	calculator stack
STKEND	23653	spare
sp	—	machine stack and GOSUB stack
RAMTOP	23730	user machine code routines
UDG	23675	user-defined graphics
P-AMT	23732	end of RAM

Table 1. Spectrum memory map. The stack point, sp is held not in RAM but in the sp register in the Z80A microprocessor.

tem variables, in line with the practice of saving space wherever possible. Hence the starting address of the channel information area and all subsequent areas is not fixed but can 'float' up and down RAM.

The Spectrum keeps track of the starting address of all those areas by storing the current value of each address within the system variables area. The system variables area is the fourth in the sequence, between the printer buffer and the microdrive maps at locations 23552 to 23733. The address within the system variables area which holds the starting address of each 'floating' area is listed in column two of table one. The address of the Basic program area, for instance, is held at 23635 within the system variables area.

Referring to each system variable by the address at which it is held is rather awkward and so each is given a name — PROG in the case of the location which holds the address of the Basic program area. Those names are for the user's convenience only. They are not

recognised by the Spectrum. Thus entering the line:

```
PRINT PROG
```

will cause the error message '2 Variable not found' to be PRINTed unless a Basic variable called PROG has been generated coincidentally by a program or by the user. The value of such a Basic variable would in general have nothing to do with the value of the PROG system variable.

Simon Carver of Manchester also has a Spectrum. He writes: "Can you explain the difference between PEEK and POKE?"

The memory map is the key to understanding the use of RAM by the Spectrum but the keys to exploring RAM are the Basic keywords, PEEK and POKE, which allow the user to look at the contents of a memory location and alter it respectively.

PEEK is a function of the form:
PEEK address

The address can be a positive whole number between 0 and 65535 or an arithmetic expression which when evaluated gives such a positive number.

It is important to enclose an arithmetic expression in brackets because

```
PEEK 16384 + 2
```

is integrated as 2 added to the result of:

```
PEEK 16384
```

whereas

```
PEEK (16384 + 2)
```

is interpreted as

```
PEEK 16386
```

The value returned by the PEEK function is the number currently held at the address in question which will always be a positive whole number between 0 and 255 inclusive. It was explained above the PROG system variable is held at address 23635 but that is not strictly correct. The value of PROG, being an address in RAM, is always much larger than 255, and therefore two adjacent addresses, 23635 and 23636, are needed to hold it. The value of PROG can be PRINTed by entering:

```
PRINT "PROG ="; PEEK 23635 + 256 * PEEK 23636
```

All addresses are held in two adjacent

			201	ret	end of sub-routine

continued from page 129

locations in this fashion and can be inspected by entering:

PRINT PEEK first address + 256 *
PEEK subsequent address

For example, if a Spectrum is used without a microdrive attached the microdrive map will be non-existent and the channel information will follow immediately after the system variables areas. Thus the value of the CHANS system variable will be the same as the starting address of the microdrive map, were it to exist, that it, 23734. CHANS is held at 23631 and 23632 and so entering

PRINT PEEK 23631 + 256 *
PEEK 23632

will yield the value 23734.

The PEEK function can be used to look at the contents of any location in memory, including the fixed instructions in ROM. It is therefore a very important tool. PEEKing any location will not cause the Spectrum to crash or corrupt a program or variables. Very occasionally, the results of a PEEK can be misleading because the contents of the location being PEEKed may alter during or immediately after the execution of the instruction. For example, if the contents of the locations which are assigned to the top left

hand corner of the screen display are PEEKed and the results PRINTed in the top left hand corner of the screen, the information will already be out-of-date by the time the user views it.

The POKE command is altogether more dangerous than the PEEK function because by invoking it the user is likely to interfere in the functioning of the Spectrum. It is quite possible using this command to make a nonsense of the information in RAM causing the machine to crash, or to halt and display an error code.

The form of that command is:

POKE address, number

Once again, the address is a positive whole number between 0 and 65535 inclusive, or an arithmetic expression which gives such a number when evaluated. Unlike PEEK is is not essential to enclose an arithmetic expression in brackets because POKE is a command, not a function, and therefore cannot be evaluated as a whole. The number POKEd into a location must lie between 0 and 255 inclusive.

Both the ZX-81 and the Spectrum will accept and execute a POKE command directed at an address in ROM — an address between 0 and 16383 inclusive. However, the number will never reach its destination because the

contents of ROM are fixed. That fact can be demonstrated by RUNning the following program:

```
10 PRINT PEEK 0
20 POKE 0, 92
30 PRINT PEEK 0
```

Line 10 PRINTs the contents of the first location in ROM. Line 20 attempts to alter the contents to 92 but line 30 will show that no effect has registered.

The final letter comes from Michael Mehta of Stoke-on-Trent. He writes: "Could you supply a machine code routine on the Spectrum which shows the elapsed time in minutes and seconds on the screen? I know how to do the job in Basic but the routine takes too long to run."

The machine code routine to display minutes and seconds is listed in table two. As usual, I have listed the code in decimal so that those people who do not have an assembler can POKE it straight into memory.

Please note that the routine runs under the interrupt system. This is achieved by setting the Z80 into interrupt mode two and then vectoring the call to the beginning of the routine.

● Please address problems and queries to Andrew Hewson, Helpline, Graham Close, Blewbury, Oxfordshire.

Venue: Civic Hall, Dawsons Corner, Pudsey, W. Yorkshire

Britain

Alton Computing & Electronics Society: C/o Kevin Weatherhead, Sheen, Old Oldham Road, Alton, Hampshire, GU34 4BW.

Aylesbury Computer Club: 12 Long Plough, Aston Clinton, Aylesbury, Bucks.

Aylesbury ZX Computer Club: Ken Knight, 22 Mount Street, Aylesbury (5181 or 630867).

Basildon: Roundacre Microcomputer Users' Club. J Hazell, Basildon 285119/416333. Meetings every Wednesday 7.30 to 10.30pm.

Blackburn Computer Club: 1 Sutton Street, Feniscowles, Blackburn, Lancashire. Tel: B'burn 60033 (office hours) or 28127. Meets twice a month, subscription £5 (£3 juniors).

Bristol Yate and Sodbury Computer Club: 99 Woodchester Yate, Bristol, BS17 4TX.

Broughty Ferry Magic Micro Spectrum Users Club: Lindsay Darroch 78 Marlee Road, Broughty Ferry (0382) 75459 or Fraser McGuire, 7 Kenaway Place, Broughty Ferry, Dundee (0382) 75821.

Cardiff ZX Club: Steve Smith (0222) 593237 or Mike Hayes (0222) 371732. Meets twice a month.

Cheshire Spectrum Club: 186, Holland Street, Crewe, Cheshire. Telephone: 0270-212653 for details.

Colchester Sinclair User Group: Richard Lown, 102 Prettygate Road, Colchester CO3 4EE.

Computer Club International: 6 Drumdoon Walk, Downpatrick, N. Ireland BT30 6UF.

Cornard Sinclair User Group: Neil MacDonald, 15 Potkilm Road, Great Cornard, Sudbury, Suffolk CO10 0DA.

Crewe and Nantwich Computer Users' Club: J E A Symondson, 46 London Road, Stapeley, Nantwich, Cheshire CW5 7JL.

Daventry & District Computer Club: c/o Daventry Ex-servicemen's Club, Market Square, Daventry, Northants.

Doncaster and District Micro Club: John Woods, 60 Dundas Road, Wheatley, Doncaster DN2 4DR; (0302) 29357.

Eastwood Town Microcomputer Club: E N Ryan, 15 Queens Square, Eastwood, Nottingham NG16 3BJ.

Edinburgh: Edinburgh Home Computing Club. John Palmer (031 661 3183) or Iain Robertson (031 441 2361).

EZUG-Educational ZX-80-81 Users' Group: Eric Deeson, Highgate School, Birmingham B12 9DS.

Furness Computer Club: R J C Wade, 67 Sands Road, Ulverston, Cumbria (Ulverston 55068). Meets every other Wednesday.

Glasgow ZX-80-81 Users' Club: Ian Watt, 107 Greenwood Road, Clarkston, Glasgow G76 7LW (041 638 1241).

Gloucester: Mid-weekly Spectrum User Group. Barry Ledbury, 8 Linnet Close, Gloucester GL4 9XA (0452) 23186.

Gravesend Computer Club: Steve Janday, The Council Tenants Club, Whitehill Lane, Gravesend, Kent.

Hassocks ZX Micro User Club, Sussex: Paul King (Hassocks 4530).

Independent QL Users Group: Brian Pain, 24 Oxford Street, Stony Stratford, Milton Keynes MK11 1JU. Tel: 0908 564271.

Inverclyde ZX-81 Users' Club: Robert Watt, 9 St John's Road, Gourrock, Renfrewshire PA19 1PL (Gourrock 39967). Meets every other Monday at Greenock Society of the Deaf, Kelly Street, Greenock.

Keighley Computer Club: Colin Price, Redholt, Ingrow, Keighley (603133).

Lambeth Computer Club: Robert Baker, 32 Heatherington Road, London SW4 7NX.

Liverpool ZX Club: Wednesdays 7pm at Youth Activities Centre, Belmont Road, Liverpool 6. Keith Archer, 031-236 6109 (day-time)

Llanelli Computer Club: 40 Tan-Y-Bryn, Burry Port, Dyfed. Llanelli 56917.

Manchester Sinclair Users' Club: Meets every Wednesday, 7.30pm, at Longsight Library, 519 Stockport Road, Longsight — 061 225 6997 or 061 445 6316.

Meopham: National ZX Spectrum User Club. Guy Fullalove, Woodcotes, Camer Park, Meopham, Kent DA13 0XS. Bi-monthly newsletter, subscription £1.50. Send SAE for details.

Merseyside Co-op ZX Users' Group: Keith Driscoll, 53 Melville Road, Bootle, Merseyside L20 6NE; 051-922 3163.

Micro Users' Group: 316 Kingston Road, Ewell, Surrey KT19 0SY.

Mid-Kent Micro Club: Meets once monthly. Enquiries to M Gates, 65 Buckland Road, Maidstone ME16 0SH.

Mill Lane Association Computer Group: Bryan McAlley, 1 Cowleaze, Chinnor, Oxfordshire. (0844) 52426.

Newcastle (Staffs) Computer Club: Meetings at Newcastle Youth and Adult Centre, Thursday, 7.30. Enquiries to R G Martin (0782 62065).

North Hertfordshire Home Computer Club: R Crutchfield, 2 Durham Road, Stevenage. Meetings: first Friday of the month at the Settlement, Nevells Road, Letchworth.

Northern Ireland Sinclair Users' Club: P Gibson, 11 Fitzjames Park, Newtownards, Co Down BT23 4BU.

North London Hobby Computer Club: ZX users' group at North London Polytechnic, Holloway Road, London N7 Monday, 6pm.

Nottingham Microcomputer Club: ZX-80-81 users' group. G E Basford, 9 Holme Close, The Pastures, Woodborough, Nottingham.

Orpington Computer Club: Roger Pyatt, 23 Arundel Drive, Orpington, Kent (Orpington 20281).

Perth and District Amateur Computer Society: Alastair MacPherson, 154 Oakbank Road, Perth PH1 1HA (29633). Meetings: third Tuesday of each month at Hunters Lodge Motel, Bankfoot.

Regis Amateur Microcomputer Society: R H Wallis, 22 Mallard Crescent, Pagham, Bognor Regis, West Sussex PO21 4UU.

Roche Computer Club: 8 Victoria Road, Coop Rooms, Roche, Cornwall: 0726 890473. Twice weekly meetings. Monday and Friday.

Saltcoats Computer Club: Colin Borland, 117 High Road, Saltcoats, Ayrshire KA21 5SD. Weekly meetings.

Scunthorpe ZX Club: C P Hazleton, 26 Rilestone Place, Bottesford, Scunthorpe, (0724 63466).

Sheffield: South Yorkshire Personal Computing Group. R Alderton (0742 20571), S Gray (0742 351440), P Sanderson (0742 351895).

Sinclair Amateur Radio User Group: SAE or two IRCs for details. Paul Newman G4 1NP, 3 Red House Lane, Leiston, Suffolk IP16 4JZ.

Sinclair Mind Games Circle: Formerly the Hobbit Appreciation Society. 12 Middlefield Lane, Hinckley, Leics.

Sinclair Postal User Group: 24 St Mary's Way, Code SUL, Chigwell, Essex IG7 5BX. Produces magazine with competitions.

St Albans: Bi-monthly meetings and a magazine. Details from Adam Slater, 40 Watford Road, St Albans, Herts AL1 2HA. (0727 54176).

Stratford-on-Avon Computer Club: Meets on the second Wednesday of every month. Telephone: 0789 68080 for details.

Swansea Computer Club: B J Candy, Jr Gorlau, Killay, Swansea (203811).

Swindon ZX Computer Club: Andrew Bartlett, 47 Grosvenor Road, Swindon, Wilts SN1 4LT; (0793) 3077. Monthly meetings and library.

Sutton: Sutton Library Computer Club; D Wilkins, 22 Chestnut Court, Mulgrave Road, Sutton, Surrey SM2 6LR.

Swale Computer Club: 1 Eastwood Road, Sittingbourne, Kent ME10 2LZ. Meets twice monthly. Contact: John Waterman.

Washington Sinclair Users' Club: Columbia Community Centre, Tyne and Wear. Meets twice a month, tel. 4179483 or 4167367.

West Sussex: Midhurst and District Computer User Group. Enquiries to V Weston (073 081 3876), R Armes (073 081 3279).

Worle Computer Club: S W Rabone, 18 Castle Road, Worle, Weston-super-Mare BS22 9JW (Weston-super-Mare 513068).

Universal ZX Club: Postal club for Spectrum owners in the UK and abroad. C Shaw, 1 Swiss Walk, Batley, W. Yorkshire.

ZX-Aid: Conrad Roe, 25 Cherry Tree Avenue, Walsall WS5 4LH. Please include sae. Meetings twice monthly.

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but ALWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All English and Scottish team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** All versions (except Apple and IBM) are supplied on tape, with simple instructions for conversion to disc/microdrive operation. (This seasons results are supplied with the package so that predictions can start immediately.)

Boxed, with detailed instruction booklet

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 20 (+ 16K), AMSTRAD CPC 464, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, IBM pc

PRICE £15.00 (all inclusive)

FIXGEN 84/5

AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1984/5. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

POOLSWINNER with FIXGEN £16.50 (all inclusive)
Fixgen alone £5.50

COURSEWINNER v3

THE PUNTERS COMPUTER PROGRAM

Coursewinner is designed to allow you to develop and test your own unique winning system. Using information from daily newspapers or 'Sporting Life', the most important factors can be input and analysed. The program is supplied with a database detailing best trainers and jockeys, and effect of the draw for all British courses. (Flat & National Hunt.)

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC (B), Dragon, Atari (48K), Apple II

PRICE £12.50 (all inclusive)

THETFORD MICROS

SPECIALIST IN SPECTRUM REPAIRS

21 Guildhall Street,
Thetford,
Norfolk,
Tel: (0842) 61645

Service Department
Unit 4, Leyland Close,
Thetford, Norfolk,
Tel: (0842) 65897

Why wait weeks to get your Spectrum repaired

We at Thetford Micros (Service Dept) have just put into operation a new fully equipped workshop to allow us to keep up our 24 Hours "Guaranteed" repair service on your Sinclair Spectrum computers. We have fully trained staff and our workmanship and repair work is fully warranted to give you the confidence that your micro is in the safest hands. Any first time repairs will be £16.00 + VAT + £2.00 postage and package = total £20.40 for any repair on your computer. Payment may be made by cheque, Barclaycard, Access, American Express, or Postal Order. So all you have to do is post your faulty Spectrum to us along with payment and we will do the rest, your repaired Spectrum will be back in the post within 24 hours (we never sleep!) and depending on the post office it will be back with you within 5-6 days.

We have already undertaken repairs from all over England and the continent.

We also undertake repair work on Acorn, Commodore, Amstrad, Texas, Dragon etc., at the lowest of prices.

Any problems with your micro phone Pete on the above telephone numbers - I'll be only too pleased to assist.

Trade enquiries welcome

Games Extra

So now you've got a new Commodore computer what are you going to do with it? We have the answer and it won't cost you a penny.

The January edition of **COMMODORE USER** has a **FREE 36 page Games Extra**. It contains six super listings for the 64, many written by professional authors for companies like Melbourne House and McGraw Hill. Shiver in Dracula's Nightmare, discover the North-West Passage in Francis Drake's Adventure or dodge the avalanche in Everest.

We haven't forgotten Vic owners either. Bricky, Beeglebug or dodge the traffic with Hoppa. All are published complete with our 'Easy-Enter' technique exclusively developed for **COMMODORE USER**.

Look out for the January issue of **COMMODORE USER**.
AT YOUR NEWSAGENT FROM THE 22ND OF DECEMBER.

The Complete Commodore Software Guide

Not content with one free gift, our February edition contains a 36 page Complete Commodore Software Guide. We list over a thousand programs, with prices. Whatever the software package you are after for your Commodore — from Jet Set Willy to word processors — The Complete Commodore Software Guide is the place to start.

On sale Feb 1st 1985.

Q&L USER

Get your FREE Micro-Drive stickers!
Available at your newsagents from February 16th

If we have reviewed a program we have given it a rating known as the Gilbert Factor, named after our Software editor, John Gilbert. That factor includes clarity of instructions, speed of operations, ease of use, originality, lasting appeal, use made of graphics and sound, and success in accomplishing stated aims.

Sinclair spares and repairs

IF, LIKE MANY other Spectrum owners, you find one day that your computer has died, you will have a major problem on your hands. Phoning the Sinclair Research customer relations department in Camberley will not help very much either.

If your electronics knowledge is limited, then you will decide to send your Spectrum to one of the companies who specialise in repairing computers. If you have a good working knowledge of electronics then the addresses listed

below should enable you to obtain most replacement parts to repair your computer. Some of the simpler repairs, such as those involving keyboards can be undertaken by those with limited knowledge.

If your computer is under guarantee then it is important that you do not invalidate that guarantee. Talk to the customer service division at

Sinclair Research and they will tell you where to send it. When returning the computer put a note in describing the fault as briefly as possible, as this will speed the repair process.

Suppliers of Sinclair parts:

Adaptors and Eliminators, 14 Thames Street, Louth, Lincolnshire. (050782) 8011. Spectrum and ZX-81 power supplies.

ASTEC (UK), 16 Albury Close, Reading, Berkshire. (0734) 53067. Supplies modulators for all countries PAL, NTSC, SECAM.

CPC, 194-200 North Road, Preston, Lancashire. (0772) 555034. Supplies all parts for Spectrum, ZX-81, ZX printer, ZX RAM pack including all case parts, power supplies and keyboard parts. Probably the best place to get ULA, ROM, case parts and keyboard.

Ferranti Semiconductors, Computer Road, Hollinwood Avenue, Oldham, Lancashire. (061) 682 6844, (061) 624 0515/6661. Supplies Spectrum and ZX-81 ULA.

Maplin Electronics, Southend on Sea, Essex. (0702) 552961. Supplies general components and data and technical books.

National Semiconductors (UK) Ltd, 301 Harpur Centre, Horne Lane, Bedford. (0234) 47147. Supplies Spectrum RAM/74LS series TTL; LM 1889 video chip.

NEC (UK) Ltd, Block 3, Carfin Industrial Estate, Motherwell. (0698) 73221. Supplies Spectrum ROM and RAM/74LS TTL; Z80A.

Sinclair Research Ltd, Camberley, Surrey. (0276) 685311.

Texas Instruments, Manton Lane, Bedford, Bedfordshire. (0234) 223000, (0234) 211655. Supplies RAM 4116, 4532, 4164, 74LS TTL (Spectrum).

Timex Corporation, Camperdown Plant, Harrison Road, Dundee, Tayside. (0382) 819211. Makers of Spectrum, ZX-81, Printer, Interface one, Microdrives, RAM Pack. Repair and service for Sinclair.

Verran (Computerfix), Units 2H & 2J, Albany Park, Frimley Road, Camberley, Surrey. (0276) 66266. Repairs Spectrums and ZX-81.

Zilog (UK) Ltd, Zilog House, 45-53 Moorbridge Road, Maidenhead, Berkshire. (0628) 39200. Supplies Z80A.

Component companies

SOME OF THE large companies mentioned above do not like dealing directly with the public. The following is a list of component companies which should be happy to deal with you. Most will have catalogues available and will supply data sheets for their products on demand.

These firms are only distributors and they do not make components. If you have a problem with a particular device contact the manufacturer as listed above because not many of the distributors can answer technical questions; RS Components, Farnell, Ambitt and Hawkes may do. Anyone needing NEC parts should phone them direct and ask for some distributors dealing with them.

Abacus Electronics, Kennet House, Pembroke Road, Reading, Berkshire. (0734) 33311. Makes dealt with: National Semiconductors, SGS.

Access Electronic Components Ltd, Austin House, Bridge Street, Hitchin, Hertfordshire. (0462) 57244. Makes dealt with: National Semiconductors.

Alpha Electronic Components Ltd, 66 Wilbury Way, Hitchin, Hertfordshire. (0462) 57244. Makes dealt with: National Semiconductors.

AM Lock Distribution Ltd, Nevill Street, Middleton Road, Oldham, Lancashire. (061) 652 0431. Makes dealt with: Motorola, Mostek.

Anzac Components Ltd, Burnham Lane, Slough, Buckinghamshire. (06286) 4701. Makes dealt with: Hitachi.

Axion Electronics Ltd, Unit F, Turnpike Road, Cressex Industrial Estate, High Wycombe, Buckinghamshire. (0494) 442181. Makes dealt with: Motorola.

BA Electronics Ltd, Millbrook Road, Yate, Bristol. (0454) 315824. Makes dealt with: Texas Instruments.

Celdis Ltd, 37-39 Loverock Road, Reading, Berkshire. (0734) 585171. Makes dealt with: Motorola, Mostek.

Crellon Electronics Ltd, 380 Bath Road, Slough, Berkshire. (06286) 4434. Makes dealt with: Motorola, SGS, Zilog.

Dialogue Distribution Ltd, Watchmore Road, Camberley, Surrey. (0276) 682001. Makes dealt with: Hitachi.

DTV Group, 10-12 Earnest Avenue, West Norwood, London SE27. (01) 670 6166. Makes dealt with: National Semiconductors.

Farnell Electronic Components Ltd, Canal Road, Leeds. (0532) 636311. Makes dealt with: Hitachi, National Semiconductors.

Hawke Electronics Ltd, Amotex House, 45 Hanworth Road, Sunbury on Thames, Middlesex. (01) 979 7799. Makes dealt with: Motorola, Texas Instruments. Will answer technical queries.

Hill Electronics (NI) Ltd, 290 Antrim Road, Belfast, Northern Ireland. Makes dealt with: Mostek.

ITT Multicomponents, Edinburgh Way, Harlow, Essex. (0279) 442971. Makes dealt with: Motorola, National Semiconductors, SGS, Texas Instruments and Hitachi.

Macro Marketing Ltd, Burnham Lane, Slough, Berkshire. (06286) 4422. Makes dealt with: Motorola, National Semiconductors, Zilog, Texas Instruments.

Quarndon Electronics Ltd, Slack Lane, Derby. (0332) 32651. Makes dealt with: Texas Instruments.

STC Electronics, Edinburgh Way, Harlow, Essex. (0279) 26777. Makes dealt with: Motorola, National Semiconductors, SGS, Texas Instruments and Hitachi.

Computer parts

Z80A: Zilog, SGS, NEC (Spectrum/ZX-81).

ULA: Ferranti (Spectrum/ZX-81).

ROM: Hitachi, NEC (Spectrum), Mostek, Motorola (ZX-81).

RAM: 4116 type — NEC, National Semiconductors, Texas Instruments, ITT (Spectrum). 4532 type — Texas Instruments, OKI (Manhattan Skyline) (Spectrum). 2114 type — Motorola, NEC (ZX-81). 4118 type — Mostek (ZX-81). 2K type — Mostek, Toshiba, Motorola, Texas Instruments, NEC (ZX-81).

LM1889: ICI4 — National Semiconductors (Spectrum).

TTL: 74LS00/74LS32/74LS157 — Texas Instruments, SGS, Motorola, National Semiconductors, NEC.

The following are all used on the 48K Spectrum.

Regulator: LM7805 +5V Reg. — SGS, NEC, Texas Instruments, Motorola.

Crystals, Capacitors, Resistors, Diodes, Sockets: available through general component suppliers.

Modulator: UM1233 Astec (UK) Ltd.

Leads: available at most TV/electrical shops.

Case parts: Sendale Plastics.

Keyboard: CPC.

DON'T VAT THE PRESS

There are strong reasons to believe the Chancellor of the Exchequer is planning to impose VAT on your magazine. Such a move would turn the clock back 130 years — the last tax on newspapers and journals was repealed in 1855. Since then 'No tax on knowledge' has been a principle agreed by all Governments, even in the darkest days of war. A free Press is a tax-free Press. No Government should be given the power to impose financial pressure on a Press it may not like. Tell your MP to say 'NO' to any tax on reading.

Issued by the Periodical Publishers Association, London
