QUAZATRON

MEASURE UP TO QUAZATRON

Penetrate the labyrinth of this subterranean citadel on the planet Quartech. Your heroics must save the human race from extermination by the alien droids. Subvert their destructive course in a series of gripping confrontations. Ward off their assaults as you grapple with death itself. Pit your wits and ingenuity against their devious array of guises and trickery. Above all – you must deactivate them. Be supreme or risk obliteration. Quazatron by Steve Turner is the Spectrum equivalent of award winning C64 Paradroid.

1 lines 20977 chars free

TASWORD TWO led the way in setting a standard for word processing on the ZX Spectrum. TASWORD THREE pioneers the new standard.

TASWORD THREE retains all the features which have made Tasword Two a household name for the Spectrum. With many additional features and enhancements, including a built-in mail merge and up to 128 characters per line, TASWORD THREE is the definitive word processor for the Spectrum and Spectrum+ with microdrive.

ZX SPECTRUM TASWORD TWO THE WORD PROCESSOR

TASWORD TWO for the ZX 48K Spectrum
cassette £13.90 microdrive cartridge £15.40

"Without doubt the best utility I have reviewed for the Spectrum"

HOME COMPUTING WEEKLY APRIL 1984

"If you have been looking for a word processor, then look no further" CRASH JUNE 1984

With 64 characters per line on the screen and a host of useful features TASWORD TWO is the ideal cassette based word processing package for the Spectrum owner.

TASPRINT THE STYLE WRITER

TASPRINT for the ZX 48K Spectrum
cassette £9.90 microdrive cartridge £11.40

A must for dot matrix printer owners! Print your program output and listings in a choice of five impressive print styles. TASPRINT utilises the graphics capabilities of dot matrix printers to form, with a double pass of the printhead, output in a range of five fonts varying from the futuristic Data-Run to the hand writing simulation of Palace Script. A TASPRINT gives your output originality and style! The TASPRINT fonts are shown to the right together with a list of compatible printers.

TASMERGE THE MAIL MERGER

TASMERGE for the
ZX 48K Spectrum
cassette £10.90

Transfer data from MASTERFILE to TASWORD TWO! Letters and forms typed on TASWORD TWO can be printed with addresses and data taken from MASTERFILE. The mail merge facility allows, for example, multiple copies of a letter to be printed, each containing a different name and address taken from your MASTERFILE data. To use TASMERGE you must have one or more microdrives as well as TASWORD TWO and MASTERFILE by Campbell Systems (version 9 or later).

TAS-DIARY THE ELECTRONIC DIARY

TAS-DIARY for the ZX 48K Spectrum and
microdrives. Cassette £9.90

Keep an electronic day-to-day diary on microdrive! TAS-DIARY includes a clock, calendar, and a separate screen display for every day of the year. Invaluable for reminders, appointments, and for keeping a record of your day. The data for each month is stored as a separate microdrive file so that your data for a year is only constrained by the microdrive capacity. TAS-DIARY will work for this year, next year, and every year up to 2100! Supplied on cassette for automatic transfer to microdrive.

TASMAN PRINTER INTERFACE

TASPRINT PRINTER INTERFACE for the
ZX Spectrum £29.90
RS232 Cable for ZX Interface 1 £14.50

Plug into your Spectrum and drive any printer fitted with the Centronics standard parallel interface. Supplied complete with ribbon cable and driving software. The user changeable interface software makes it easy to send control codes to your printer using the method so successfully pioneered with TASWORD TWO. The cassette contains fast machine code high resolution full width SCREEN COPY SOFTWARE for Epson, Mannesmann Tally, Shinwa, Star, Tandy Colour Graphic (in colour) printers. TASCOPY shaded screen copy software for this interface (value £9.90) is INCLUDED in this package.

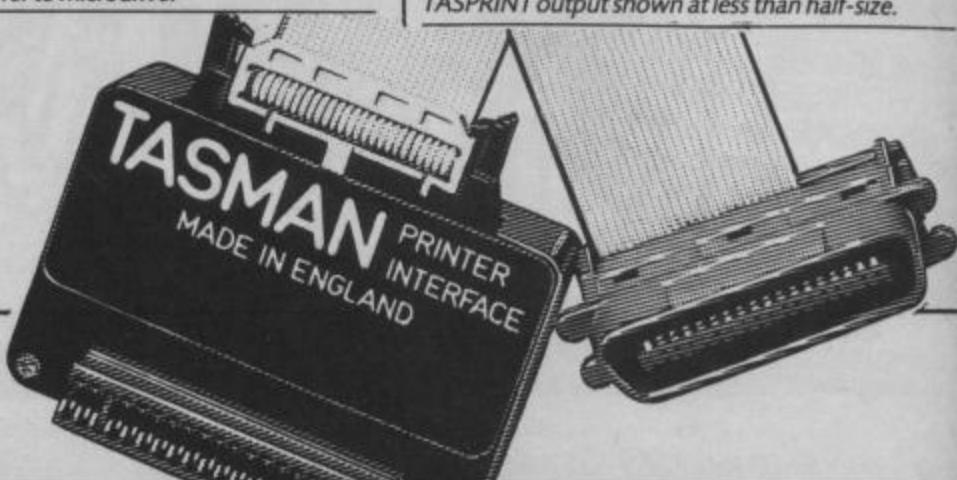

The TASCOPIES and TASPRINTS drive all Epson compatible eight pin dot-matrix printers e.g.

AMSTRAD DMP2000	NEC PC80238-N	BROTHER M1008
EPSON FX-80	MANNESMANN TALLY MT-80	SHINWA CP-80
EPSON RX-80	STAR DMP501/515/5610	DATA PANTHER
EPSON MX-80 TYPE II	COSMOS-80	DATA PANTHER II

COMPACTA - bold and heavy, good for emphasis

DATA-RUN - a FUTURISTIC SCRIPT
LECTURA LIGHT - clean and pleasing to read
MEDIAN - a serious business-like script
PALACE SCRIPT - a distinctive flowing font

TASPRINT output shown at less than half-size.

Mr J H Shears,
17 High street,
Lockton Bay,
Lancashire. LA7 6LK

28th January 1986

Dear John,
Thank you for your letter of the 15th January. I have corrected the first draft of the article and I have incorporated your suggested changes. It is a good thing that TASWORD has a find and replace facility! You will see from the enclosed printout of the corrected draft that I have also made some other changes and I hope that you agree that they are an improvement.

[Line 1] [Col 7] R/J on [W/B on] [Insert off] Pg/Bk off [EDIT=help]

Please note that TASWORD THREE is only supplied on, and will only run on, microdrive.

TASWORD THREE - THE WORD PROCESSOR - Microdrive £16.50

One of a famous family: TASWORD TWO (ZX Spectrum), TASWORD MSX (MSX Computers), TASWORD 464 (Amstrad), TASWORD 464-D (Amstrad), TASWORD 6128 (Amstrad), TASWORD EINSTEIN (Tatung Einstein), TASWORD 64 (Commodore 64)

Available from good software stockists and direct from Tasman Software, Springfield House, Hyde Terrace, Leeds LS2 9LN.
Tel: (0532) 438301

TASCOPY THE SCREEN COPIER

TASCOPY for the ZX Spectrum with Interface 1 cassette £9.90 microdrive cartridge £11.40

The Spectrum TASCOPY is for use with the RS232 output on ZX Interface 1. It produces both monochrome (in a choice of two sizes) and large copies in which the different screen colours are printed as different shades. With TASCOPY you can keep a permanent and impressive record of your screen pictures and diagrams. A list of printers supported by TASCOPY is given to the left.

TASWIDE THE SCREEN STRETCHER

TASWIDE for the ZX 48K Spectrum cassette £5.50

With this machine code utility you can write your own Basic programs that will, with normal PRINT statements, print onto the screen in the compact lettering used by TASWORD TWO. With TASWIDE you can double the information shown on the screen!

SINCLAIR QL

QL is a trademark of Sinclair Research Ltd

TASCOPY QL THE SCREEN COPIER

TASCOPY QL for the Sinclair QL microdrive cartridge £12.90

TASCOPY QL adds new commands to QL Superbasic. Execute these commands to print a shaded copy of the screen. Print the entire screen or just a specified window. TASCOPY QL also produces large "poster size" screen copies on more than one sheet of paper which can be cut and joined to make the poster.

TASPRINT QL THE STYLE WRITER

TASPRINT QL for the Sinclair QL microdrive cartridge £19.95

TASPRINT QL includes a screen editor used to modify files created by other programs, such as QUIL, or by the user from Basic. These modified files include TASPRINT control characters and may be printed, using TASPRINT, in one or more of the unique TASPRINT fonts.

Cheetah

Marketing

are proud to announce
the arrival of their
125 Joystick

Compatible with ZX Spectrum, 48K, 128K, Commodore 64, Vic 20, Amstrad, Atari, MSX, etc.

At only £8.95 the features on the 125 are second to none. Besides its unique internal structure, built to withstand immense punishment from even the most vigorous games player, the joystick contains no less than four extremely sensitive fire buttons. Two are housed in the handgrip which has been moulded for extra comfort and ease of operation. The trigger finger fire button provides ease and comfort for your finger and the top fire button is contoured to fit your thumb for sure fire shooting. The base fire buttons are positioned for extra control and two hand firing whether you are right or left handed.

A built in auto-fire switch provides continuous shooting at the touch of a fire button.

The 125 comes complete with a full 12 months warranty and is available from **WHSMITH** • High Street stores and all good computer shops.

**ONLY
£8.95**

Price include VAT, Postage and Packing. Delivery normally 14 days. Export orders at no extra cost. Dealer enquiries welcome. Send cheque/PO now to:

Eureka, as the Scotsman said to his smelly friend. But as well as a really bad joke (*What joke? Ed*), Eureka is also the name of Domark's first product after the horrors of *Friday The 13th*. It's a medium resolution monitor with the option of using it in green screen mode. It also boasts a sound booster for your Speccy's beeps and then plays them through its own speaker. But the most interesting feature is its expand screen option. Now you can make yourself feel really sea sick by zooming in'n'out while you're playing a game. At under £250 we can even forgive 'em for importing it from France.

'FRONTLINES'

Calling all Fairlight fans. Don't get too excited 'cos Fairlight II — *A Trail Of Darkness* isn't out yet. Soon but not yet. Just to give you a taster of the natty new graphics, here's a look at the title screen showing the spooky bit where you're out of the castle and out of your ear. But if you really can't wait and you own a 128, the expanded version of Fairlight with a new solution and extra rooms should be in the shops even sooner. Sooner but not yet...

MIRRORSOFT

Dr Blitzen and the islands of Arcanum

Written by **ROD BOWKEFF**

'SCRAZY!'

Mirrorsoft is going bananas and releasing megatons of games this month. Numero one is *Dr Blitzen And The Islands Of Arcanum*, an arcade/adventure follow-up to *Dynamite Dan* — see pur-reety brillo, fab screenshot. Second is *Reflex*, a labyrinth of caverns game ... um... and there's the battle/flight simulator. *Strike Force Harrier* ... er ... and scary ... *Nervous Wreck* — an underwater diving drama.

He can't even give 'em away! Sir Clive launches the Spectrum 128 on a suspecting world.

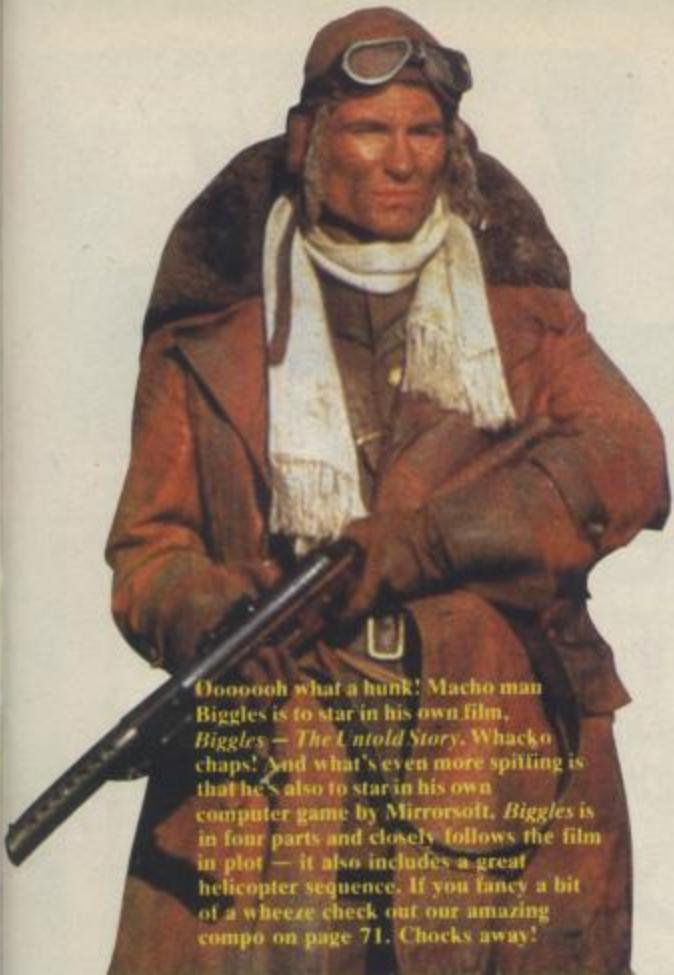

MURDER, MYSTERY, SUSPENSE!

It's the strange case of the corpse at Castle Rathbone — has the Ed subbed his last? Better dead than Ed! Clues on page 25

WOW!

Fourteen software houses have donated computer games to War On Want to raise money for development work in the Third World. The Speccy games include *Hunchback II* from Ocean, PSS's *Xaviour*, *Imagine's* classic *Pedro* and one from Jeff Minter called *Headbanger's Heaven* (*Don't call us, Jeff!*). If you want to have a lorra lorra fun and do someone a favour at the same time buy a copy of *Wow Games* for only £9.95 — that's just, calculator out, 71.071428p per game — a bargain. And by George (Galloway), just look at the fun the General Secretary of War On Want is having.

Ooooh what a hunk! Macho man Biggles is to star in his own film, *Biggles - The Untold Story*. Whacko chaps! And what's even more surprising is that he's also to star in his own computer game by Mirrorsoft. *Biggles* is in four parts and closely follows the film in plot — it also includes a great helicopter sequence. If you fancy a bit of a wheeze check out our amazing compo on page 71. Chocks away!

● Hair by Toni ● Beards by Barry ● Models: Paul Norris and Rupert Bowater ● Opening a new software salon called Binary Vision following their breakaway from the Electronic Pencil Company of *Fourth Protocol* and *Zoids* fame. Games designers by appointment to the Palace (Software). First collection to be launched at the PCW Show in September...

T'Zers...

Gasp. Puff. I nearly didn't pant. make it this... huff... month 'cos the train from Manchester pant... to London was delayed... gasp... due to... lemmings on the line. But what was I doing in Manchester, eh? Looking at Ocean's new kerpow-zap-sockit-to-em...

Batman game, that's what! And holy mackerel is it hot — have a look for yourself on page 60. Splat! Talking of jetting around the country — I've also been down to sunny Brighton to see a couple of Martech's programmers. And d'you know what they told me? Martech's Managing Director, David Martin found his programmers weren't open to persuasion when it came to digitizing bouncy Sam Fox. Sound a bit perty to you? That's what I thought but it's actually all being done in the name of the new game **Sam Fox's Strip Poker**. Titter titter.

Interesting link, this. Domark having made a bit of a boob with **Friday 13th** is definitely producing a game based on the James Bond movie **Live And Let Die**. Boy racers Dominic and Mark are also in the throes of signing a few more licensing deals but they're keeping stumm on whether it'll be for another film.

Everyone's catching the licensing bug. Those complete-and-utter-nutters at Orpheus are hoping to secure another contract for a game based on a TV program. Other than that it's converting a Commie 64 game (spit, spit) to the Spectrum (yippee) and it's called **The Web**.

And guess what? Well, if you can't guess I'm certainly not going to tell you. Oh okay then. I'll give you a clue. Elite licensing deal again. Arcade Classic. **Paper Boy**. Got it? Watch this space for more details.

Eh up flowers. Let's go t' pub w/ t' whippet an' ferret t' play Alligata's new game **Pub Games**. It's got all the old favourites — darts, dominoes, table football, pool and pontoon. There's nowt quite like it.

If you've played **Back To Skool** you may well be wondering who Sam Cruise is. Who indeed. If there's no one else listening I can tell you. **Contact Sam Cruise** is actually Microsphere's new 1940's style detective game and it promises to be big schhahh. And while we're on the subject did any of you

F A B 'N' G E A R !

Last month, YS brought you the 'Do-it-yourself-and-look-a-right-wally' **Trainspotter** kit. Caused quite a stir down at King's Cross we can tell you. But we can't let the anorak and notebook brigade hog all the glam spots. So, for all the trendspotters rather than the trainspotters, prepare to be put in the picture about all that's hip in the Spectrum world. Dedicated followers of fashion will note that it's now ultra cool to have an old style Speccy. Rubber is definitely making a comeback this season. Some hipsters are even making a move to revive the 16K machine — here at YS we've dubbed them the **Artificial Hips**. And it's no good you trainspotters pointing out to the trendies that microdrives are an unreliable form of storage. You can talk till your spots drop off about Wafadrives and disks but Joe Cool's only interested in matching logos. Form not function is his motto. Stylish or what?

● Sinclair ZX Spectrum (no longer available in this format) ● Sinclair Microdrive and Interface 1 (£99.95) ● Microvitec Cub Monitor (£242.61) ● Romantic Robot's Multiface 1 (£39.95) ● Transform microdrive storage box (£5.95) ● AMX Mouse (£69.95 — Rainbird's Art Studio is tucked away in the piccy too) ● CGL Command Control Joystick (£27.95) ● Sony WM22 Walkman (£29.95) ● Sony Sports Headphones (£29.95) ● Grand Gorgon Zoid (£17.95) ● Hi-Tec Trainers (£22.95) ● Aiwa Stereo Radio Cassette Recorder W330 (£99.95) ● Casio FM Card Radio (£19.95) ● Marks and Spencer Pullover (£14.99) ● Designer Trousers (£18.99) ● Crappy cassette recorder found in Castle Rathbone (no value whatsoever) ● Your Spectrum Binders before they'd been artfully changed into Your Sinclair ones (a snip at £4.95) ● Plastic Pacman (99p from the Brighton Rock'n'Novelty Shop).

SPECTRUMS FROM AROUND THE WORLD

Number one in a series of one. Collect the set.

Bet you didn't know that the Brazilian Spectrum, the TK 90X from Microdigital is rather different from our own native machine. The NMI Rom error has been fixed and there is no dot crawl just like the 128.

It's also got two added instructions — Trace and UDG — and all the messages are in Portuguese. Technical note for Trainspotters: "Interface incorporado para joystick, de 4 posicoes de movimentacao."

Here you are in the Ice Palace... a shiver runs up your spine... is it the cold?... or is it... a... g-g-ghooooost. Elite's Ghosts And Goblins holds the answer. More details on page 56 and in next month's megagame review.

A black and white photograph of a man with dark hair and a mustache, wearing a dark t-shirt with horizontal white stripes. He is looking directly at the camera with a surprised or excited expression. He is holding a sandwich in his right hand, which is partially open. The sandwich appears to be filled with meat and cheese. The background is dark and out of focus.

All you latin scholars (amo, amas, amat) will immediately know that the word Opus means work. And that's just what the Opus Discovery now does with the 128 — work. For 149 librae and 49 denarii you get a 250K disk drive that uses 3 1/2 inch disks and includes a joystick interface amongst other things. Now parse off and construct a sentence

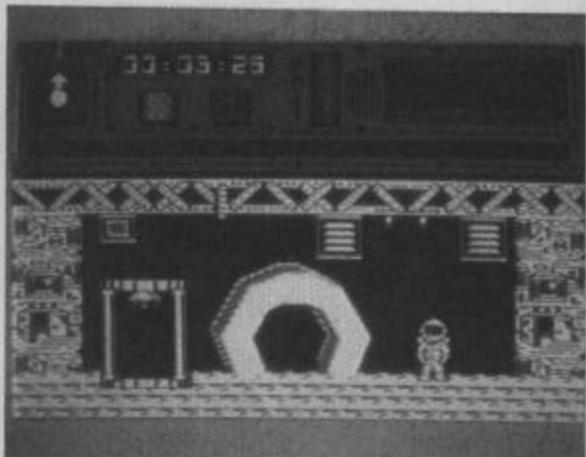

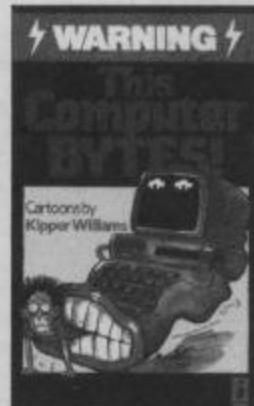

using the words *Opus, Spectrum and I, Claudius.*

Don't think you can doze off just 'cos it's Knight Tyme, Mad Game's follow-up to Spellbound. Fast forward into the 25th century to meet our old mate, the Magic Knight aboard his starship. Take a walk around the 50 rooms and 49 planets, rub shoulders with 16 different characters and choose from 50 objects. And you'll still only have to cough up £2.99. Zzzzzzzzzzapeeeeee!

Atten-shun! Ocean's latest contribution to world peace and mutual understanding between the superpowers is called Green Beret. In it, you single-handedly take on an invading army by stabbing, shooting and generally sticking a rocket up 'em - all the skills you acquired in Rambo. Understanding between the superpowers, you ask? Hats off to Ocean for avoiding the American title of Konami's arcade original, Russian Attack!

*Ho, ho, ho, chuckle,
grin, titter, that Kipper
Williams is a card eh,
snigger, ha ha, ner, snort,
£1.95, raucous laughter,
tut, rollick, tee-hee,
chortle, HA!, smirk,
giggle, hoot.*

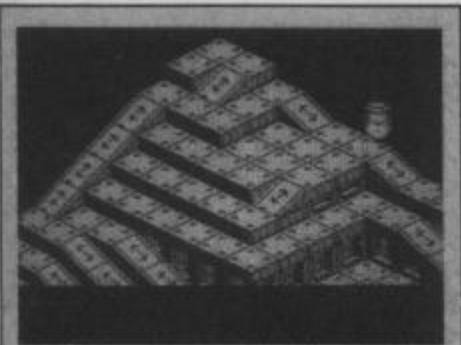

Core! It's the new arcade/adventure from A'n'F Software — its first since Chuckie Egg II. All the action takes place in the core of an asteroid, and the aim of the game is to pick up various objects and suss out how to use them. Watch out for Core II too.

FRONTLINES

Oh lawks what a card! Those chaps at Cumana have just launched a revolutionary new memory storage system — the Astron Integrated Circuit Card. But what's really interesting about this credit card type device are the rumours that Sinclair will be adopting the Astron storage system rather than disks on its Pandora portable promised for later this year. That'll do nicely, Sir!

Worrisgoin' on? Not content with calling its latest arcade/strategy game by the completelyunpronounceable name of *Ziggurat*, Hewson's now decided to change it to the evenmorecompletelyunpronounceable name of *Quazatron* — sounds like an ever-so sickly fizzy drink to us. It's all set in the future on the subterranean city of Quazatron where you control a Meknotech robot who has to grapple with battle droids, service robots and repair mobiles. And just look at your range of weapons — including ram thrusters would ewe believe.

The following words may not appear in this story by strict order of the Editor: PEEK, POKE, knockers, tips, a nice pair, top deck, well stacked, wah-hay!

Martech's taking a gamble with its new release but it has got two big things going for it! *Samantha Fox's Strip Poker* (*Sounds a bit over the topless. Ed*) and *International Seven Card Stud* is a twin program that has taken longer to develop than Sam herself.

It's all done with artificial intelligence, this is Sam Fox, and contains digitised pictures of the Foxy Lady herself. And apparently, Sam is no pushover so it'll take a lot of skill before she gets 'er kit off — you'll need, at least, a Royal Flush.

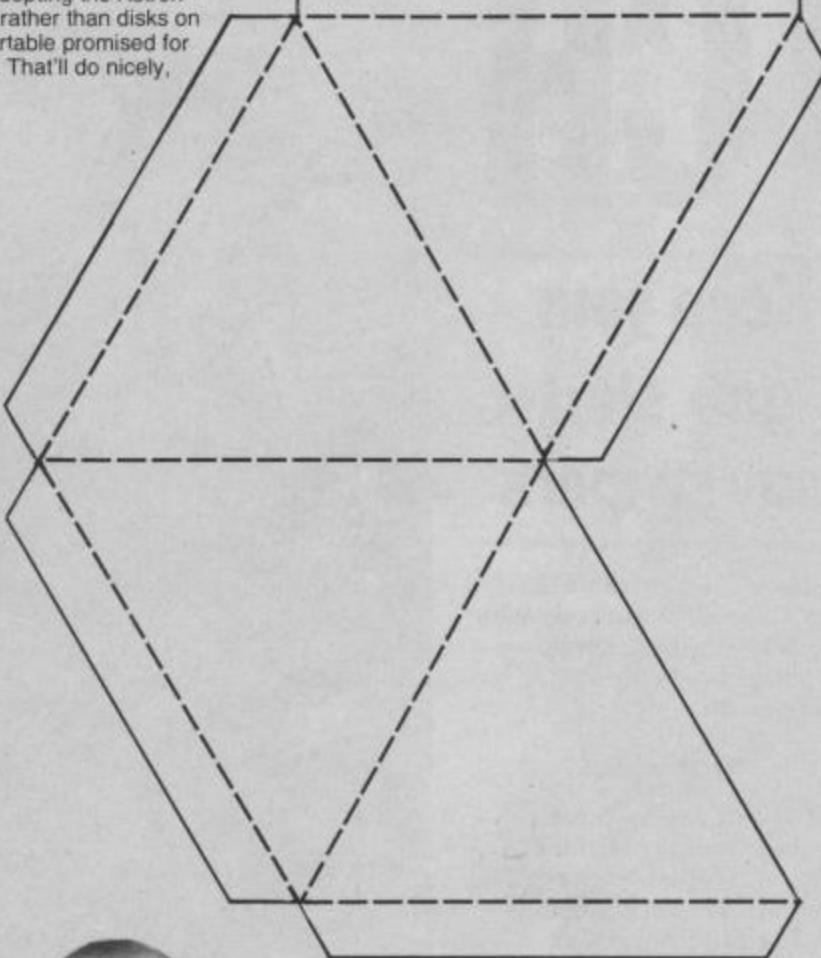

• Jet-setting T.P. really is off to foreign parts this month, on holiday (*Holiday? Ed*) but he'll be back next month...

You can't go far wrong with Frontlines. Look what we've got for you this month. An easy-peasy-do-it-yourself-patent-microdrive kit! Wave goodbye to messing about with cartridge doctor programs or carefully rethreading that cartridge you accidentally opened. Build our revolutionary repair unit based on ancient Egyptian computer technology and it'll automatically recover duff files, cure bad sectors and improve access time!

All you've got to do is cut out the shape below and stick it to a piece of stiff black card.

Simply place your faulty microdrive under the special repair unit and leave it overnight. Next morning the tape'll work like magic. No peeking, mind you...

Cut — **Fold** — — —

Have you ever wondered what's happened to all those unsold C5s? Well, Sir Clive's shipped 'em over to the Yanks where they're used to life in the fast lane — though they'll have to get unused to it a bit sharpish if they want to say alive in a C5.

As you'd expect the brochure is packed full of the usual American hype. "Cruising at up to 15 miles per hour — an exhilarating speed in an open-air vehicle like the C5 — you're not just driving by the environment. You're in the environment, part of it. So you can smell the flowers and not the gas. Hear the birds and not the engine." Tweet ruddy tweet.

Trainspotters out there notice the mistake in the Sam Cruise ad in last issue? Thought not you really are slipping you know.

Crumbs! **YS** nearly came a cropper last month when **Young Ones** star Nigel Planer's agents rang up to sound off about issue 2's cover. Luckily they didn't have a leg to stand on... least not after we sent Vyvyan round to deal with em. There's no pleasing some people.

Remember last month I told you about Saga's new infrared keyboard? It's now been christened the 2001 and it's remote controlled so you can wander off to the loo while typing in the **YS** program pull-out. Wipe that smirk off your face — we don't want any smut about using **YS** as loo roll — this is not yet average bog standard magazine. Hmmmm.

Isn't it great to be soooooo very popular. The programmers converting **Fairlight** to the Commie 64 and Amstrad are using the **Fairlight** map in **YS** issue 1 to find their way about. Impeccable taste. Enough of all this sickly sugary sweetness. Yeurrch! Let's get on with some more skulduggery. PSS is on the warpath again. Tactics are to release Commie conversions. **Battle Of Britain** and **Theatre Europe**. It's also on a manoeuvre to produce **Iwo Jima**. Hrrumph!

Naughty naughty! If you want to know why Activision's **Ballblazer** hasn't reared its ugly head yet it's because Lucas Films told the programmers it wasn't up to scratch and sent them off to have another bash. Should be good when it does arrive!

Oh and here's some really good news. It's now been decided which games'll feature on the **Off The Hook** tape that'll hopefully raise money to help drug addicts. Are you ready for it? Here goes.

Pitfall II. Cytron. Fall Guy. Sam Stoat. Ad Astra. Splat. Mugsy. Kong. Strikes Back. Chequered Flag and Blue Max. Great stuff!

And now for the Tasteless Scrooge Award. Really does Argus Press Software have to compare its latest compilation of 30 games with those of **Softaid** and **Off The Hook**? And even worse — describe them as 'miserly'. At least all the profits of those compilation tapes go to a good cause which is more than you can say for the profits of **30 Games**.

Oh, and before I go the Pandora portable (note lack of cheap'n smutty cricketing jokes) will be launched at the end of this year and rumours are that it'll use the Astron credit-card for of storage. Don't leave home without it.

And that, as they say, is that!

Teresa Maughan

VIRGIN MAKES OFFER YS READERS CAN'T REFUSE

F.A. CUP SNATCH

VICIOUS THUGS smashed their way into the F.A.'s Headquarters yesterday evening and made off with the F.A. cup.

Elderly caretaker, Oliver Shuffles, was there throughout the drama. He's now recovering from his ordeal.

Oliver, 72, later told police that he'd been threatened by the youths.

Obscenities

"They shouted obscenities at me", he said, "like, keep yer gob shut Grandad or you'll be into injury time. Know wot we mean?"

Morale in soccer circles is running at an all-time low. But now Virgin Games has stepped in.

Reward

Virgin is offering a reward of a Minerva football and 30

Keep your gob shut say swipers

copies of its new game *F.A. Cup Football* to anybody who can help get these soccer swindlers booked — permanently.

Tie-breaker

And you can help too. Virgin is sending in the F.A. Team — football's answer to the A Team, but it needs a hand in choosing which footballers would make up the best team. Just choose five players who you think would have the best chance of getting the F.A. Cup back into play. Then all you've got to do is complete the tie-breaker in less than 10 words. Fill in the coupon below, or a photocopy, stick it on a postcard and send it to F.A. Cup Compo, YS, 14 Rathbone Place, London W1P 1DE.

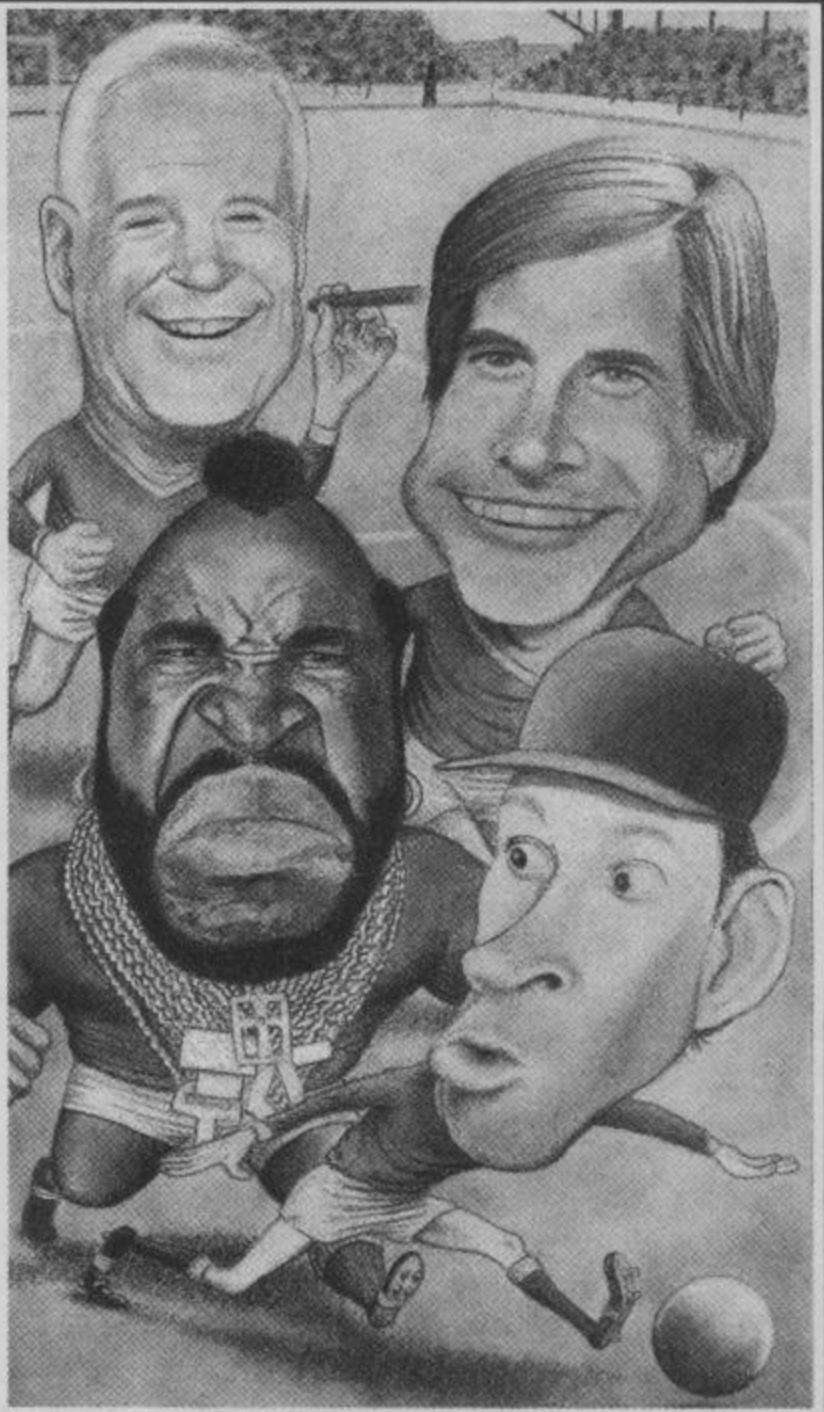

Illustration: Nick Davies

I'd choose these players to make up my F.A. Team:

1.

2.

3.

4.

5.

My F.A. Team's the best 'cos....

Name....

Address....

Postcode....

YS Says

It's time we showed these cup crooks the red card. These thugs have scored an own-goal with this little caper. We say send the snatchers off and give 'em extra time.

YS RULES F.A.

Sportscene and Virgin players will be sent off if they attempt to enter.

The cup draw takes place on the 31st May with no allowance for extra time.

Fall foul of the Editor and you're booked.

WRITE TO: YOUR SINCLAIR, 14 RATHBONE PLACE, LONDON W1P 1DE
A fabulous bundle of software for the star letter • All letters win a YS Badge

STERN WARNING

At last the cover illustration of Your Sinclair issue 3 has pushed me into writing to you.

Do you really think that the image of computing (to non computees) is enhanced by the childish and revolting cover of your latest issue?

My wife asks, do I have to read horror comics? My nurse says, is this what you look like after an hour at the keyboard?

I would not read this issue in a crowded train! Perhaps you should advertise your subscription rates with 'sent under plain cover' in case the postman sees what the readers are getting.

B Stern
Northwood, Middlesex

He came from Northwood. At first he seemed normal enough, friendly even. But the tell-tale signs were there. Why did he need a nurse? After all, he was only suffering from a mild case of fogeyitis. Finally, the full horror dawned but by then it was too late. 'Mr' Stern removed his mask and revealed himself to be... a dentist! Ed

I'm still reeling from the YS cover illustration of issue 3.

Now every time I see my Spectrum, I imagine a hand ripping off the rubber membrane to reveal... oh, it's too too horrible... a BBC computer!

I know Tom Stimpson was the culprit, although his name was written so small at the bottom of the contents page, you would hardly let him take the blame.

Why wasn't the identity of this man much bigger, so everyone could see what a devilish genius he is. The rascal has a mighty talent for artwork if he can stun me like that.

J Hayes
Bushey, Herts

Glad someone liked the cover — even if, as many of you pointed out, our visiting reptilian had human eyes and didn't speak with forked tongue. But how could Tom Stimpson tell — for once in her life, T'zer refused to stick her tongue out at someone. Ed

CLEESED OFF

"95p! 95 flippin' p a month we pay for YS! I mean, what has YS ever given us?"

Well, there's Frontlines, T'zers, QL News...

"News!"

There's Letters, Doodlebugs, Trainspotters, Hack Free Zone... "Apart from Frontlines, T'zers, QL News, Letters, Doodlebugs, Trainspotters and Hack Free Zone what has YS ever given us?"

Hex's Heroes, Reviews with some pretty hot screen shots, Hit List, Previews, Megabasic, Task Force, Maps, Hacking Away, Microdrivin', Heart To Hartnell, Cartoons, QL Software, Hard Facts, Adventure Pages...

"It's too small!"

Input/Output, Backlash, great compos, listings...

"There aren't any adverts!"

Oh yes there are!

"Okay, apart from Frontlines, T'zers, QL News, Letters (Snip! Ed), listings and adverts what has YS ever given us?"

There aren't any decent letters... except this one!

In short, thanks YS, it's well worth it!

David Bovill
Pwllheli, Gwynedd

PS Let's have some photos of the YS team in the mag (especially the gals!)

After an ad like that, how could I refuse. So here they are — YS's answer to the Nolans, the Nohopes!

Someone once said that they made the sound of a Spectrum loading seem musical. Ouch! No, course it wasn't me who said it... Ed

expect after an hour in there!) I ended up outside three quid worse off. And for this paltry sum I received a MAD game called Spellbound.

What made me defy the laws of tight-fistedness? You — yes it was the old smack between the user ports with a screen shot ploy. Anyway on with the story. This game as it 'appens was so hard that I ended up committing Sinclair sacrilege and in a fit of rage... Aaaaargh... the old Speccy got an exploding fist in the rubber keyboard.

Now at this point things really start to hot up. Suddenly before my eyes appears the Basic loader — mysterious eh? Then after a poke around, instead of rejoining the on-screen frolics, it happened. The top of the screen was spewing pixels all over the shop and before my very eyes appeared this message: "Hello Hacker!"

Well, Spellbound I certainly was. And at £2.99 that was the cheapest way that I've heard of becoming a hacker. So, in order to prevent undue stress and excitement on those with dickie hearts here is a warning: Status Warning — YS can seriously affect your unhackerliness.

Think the mag is all the usually creepy comments and a few more. Oh yes, and was that 'From Czar Hip' that I sore in ish 3. I'm shaw that Mr Shore should be informed of what a commie machine is...

Richard Tucker
Canterbury, Kent

PS Did you know that the PM's a hacker? (Beeb 2, 9pm)

Yes, you have all the makings of a true hacker in the style of our very own Chris Wood. He too is prone to random acts of violence and to telling naff jokes. Which come to think of it, is well on the way to qualifying the pair of you to become politicians. Gulp. Ed

NOW YOU SEE IT...

Well you've finally cracked it... the ultimate unfinishable game. Space Invaders without the invaders! Are you trying to start a new craze like crosswords — a page full of

Zigzag, Spot and Nik?

MY BRAINE HURTS

Recently my Speccy keyboard gave up on me (well, it was only four of the keys actually) but that was bad enough. I thought I'd have to pay £20 to get it fixed but, in fact, all it cost me was 95p. I dismantled the Speccy and found the problem — the membrane. So, I wedged a piece of, yes you guessed it, YS under it and now it works perfectly.

D A Rogers
Ruislip, Middlesex

And this is because YS reaches the parts other mags cannot reach. Ed

CHEAP HACK

Bonjour gringos (or do I mean comrades?). I just had to tell Peter Pan, YS's mild mannered shootin' man, as well as amaze and enthral the paying public, with my true story (soon to be made into a major TV drama!).

'Twas a Friday evening as it happened, and as we all know, Friday evening everybody gets the urge to do summat really freaky (like build an RS232 lead out of an egg carton). Personally, I went completely loopy and did a bit of the old GBH on me piggy bank. After an hour in Boots which I have no recollection of (what d'you

LETTERS

gaps that you have to fill in with the right letters? Your latest attempt at the do-it-yourself game trade was *Battle Fleet Orion* in issue 3. All human life was there — except for the graphics. It's great shooting invisible lasers at invisible invaders — you can't lose!

A *Trainspotter Award* — ha! — more like the York Railway Museum!

P J C Sutcliffe
Worcester Park, Surrey
PS Could you possibly send me an amendment sheet so I can cheat and see what I'm doing.

Fiendish, isn't it. Of course, we can't claim that the idea's totally original — *Elite* did have invisible aliens first. It's just that we've taken the concept one stage further and given them invisible lasers. But as usual, all modern art is misunderstood at first, so for all you traditionalists who can't enjoy a good game unless you can see something, an *sae* will secure a version of *Battle Fleet Orion* with visible aliens. Just how boring can you get! Ed

A HUNDRED LINES

What about the *Back To Skool* review? The safe isn't where Rachael says. It's on the other side of the room — yes, that thing with the cross on it is no First Aid box. Then there's a real mess on 'how to conker Albert.' You have to drop a stink bomb near a window, not near the tree. And when you knock out Albert (from the top window, incidentally) he doesn't give you any lines. The Ed must've been pressing Rachael too hard (No such luck! Ed), because she doesn't seem to have played the game for more than an hour or so.

Jim Routsis
Athens, Greece

PS Since you'll start making some very clever remarks when you see where I live, here's some help: moussaka, ouzo, sirtaki, Zorba, opa! How about Troubleshootin' Petros for next month?

Ah, Greece! Cradle of civilisation. The wine-dark seas lapping the sun-drenched shores. You may have lost your marbles (for the time being) but think of all you've given to the world besides moussaka, ouzo and those squelchy squid things that taste like a Speccy keyboard. Yeuch! Homer gave us the nod, Archimedes the screw, Plato invented the cross-your-heart bra and Demis Roussos the one-man tent. But

TRAINSPOTTER AWARD

You are the Ed and I claim my *Trainspotter Award*. On page 17 of March's issue of (wait for it) fabulous *Your Sinclair* (pause) in the review of *Raiders Of The Lost Ring* (I know where to look) the highly significant overall figure calculated from graphics, playability etc etc has been PRINTED INK white OVER PAPER white. This makes it

above all we must sing the praises of Greece, the home of... Nana Mouskouri! Ed

RASPUTIN RIP-OFF

I'm writing to you about tape piracy which may not be known in England but it's a way of life to Portuguese salesmen.

This has its 'advantages' since I never have to pay more for any game than you have to shell out for *Finders Keepers*. But don't jump to conclusions too soon. Very rarely do we get any playing instructions. Can you image playing a game like *Elite* without knowing what's going on.

But if this wasn't enough, the weirdest thing happened to me this week.

Two weeks after your exclusive review of *Rasputin* I saw it in a shop so I rushed in to buy it. It was a good buy, excellent graphics, good animation and so on, just as it was mentioned in your review but... something was wrong!

When I completed the fourth screen, guess what? Where was the fifth screen? Imagine my face when I realised I'd bought a copy of the demo program that came along with the first issue of *Your Sinclair*. I'd just like you to print something to show the dealers who sold me this game that their attitude is not on.

Oh, before I go, could you let me know if the signature Ed stands for a name? I'm a little confused as I seem to remember an English film on

difficult to spot at a glance which review is worth reading immediately and which to leave till after your tea's ready.

Christopher J Sutcliffe

Halifax, West Yorkshire

PS Why on page 4 of the same is there a picture of Esther Rantzen in *From The Hip* instead of You-know-who? I think we should be told.

That's life, I suppose. As for the *Trainspotter Award*, I'm afraid you've disqualified yourself. It was indeed printed white on white but you'll find that if you look at the page in a dark room the number appears black. Okay, so does the rest of the page, but you can't have everything. Ed

Do you think that this letter deserves a *YS Trainspotter Award*? (What d'you mean NO!) (What d'you mean by putting comments in brackets? I'm the only one allowed to do that. Ed) After reading through *YS 3* for the umpteenth time (nothing much else to do on a

the telly all about Mr Ed, the talking horse...

Jose Pedro
Portugal

You're confused! How d'you think we all feel working on a magazine that's got a talking horse for an editor. Explains a bit about the magazine though, don't you think?

Troubleshootin' Pete. Nay! Ed

FRIDAY 13TH — PART TWO

Bleeeuugh! That word just about sums up my thoughts on the *Friday The 13th* poster in *YS 2*.

Being too young to see the film, I also consider myself too young to pin this gory poster to my wall.

I don't mind the blood splattered face too much — it's the photo of the Ed in the top left hand corner that revolts me.

Chris Buxton
Keighley, W Yorks

PS Why the candles Ed? Had the money in the electric meter run out?

No, it was the Ed's birthday!

Sunday really, except clean the car, mow the lawn, take the dog for a walk etc etc), I suddenly realised what it was that was giving me large brain pains (and no it wasn't my *SpecDrum* playing at full blast!). Looking at Rachael Smith's article on the drum synthesizer I couldn't help wondering if she has somehow got her menu's in a muddle. Shouldn't the so called *Edit* menu be renamed as the *Pattern* menu, and the so called *Pattern* menu be renamed the *Real time* menu (or perhaps my version of the *SpecDrum* is different to everyone else's?)

Tim Jarrett
South Norwood, London

Now I know it looks bad but there's a simple explanation for all this... just give me time to make one up. In the meantime perhaps a *Trainspotter Award* will keep you happy. And do us a favour — next month mow the dog and take the lawn for a walk. Ed

Well, we've always said he's a real 'Edcase'. But now someone wants to kick him up the bum. He can borrow my boot!

Troubleshootin' Pete

I most strongly protest about the *Friday The 13th* feature in *YS 2*. I don't know what 'idiot' was responsible for its inclusion but whoever it be, he needs a jolly good kick up the backside!

I've been a devoted reader of your mag for a long time but if you're going to keep putting disgusting and horrific items like this in, I'm off! And furthermore, I don't think I'll be alone either! Think about it.

Anthony Mayers
Wrexham, Clwyd

slap T.P.'s legs for not noticing your little slip.

Nic Walde
Bracknell, Berks

I've told him not to mention my slip in the mag. What I wear is my own affair. Ed

What are the qualifications needed to become editor of *YS*?

T Dalziel
Aberdeen, Scotland

Genius, pure genius. Oh, and modesty. Ed

SMALL PRINT

I think that *YS* is very rude, cheeky and full of 'sex'. I love it!

Simon Woolcott
Glasgow, Scotland

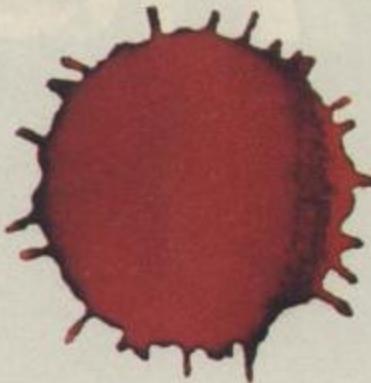

Sex? Are you sure it's *YS* you're reading? Perhaps the subscription department has started sending it under a plain brown wrapper. Ed

By the way, it's still the best mag on the market and I suggest you

Beyond the Spectrum.

SPECTRUM UPGRADE KIT

TURBO INTERFACE

Four great new add-ons from Ram, Number One in everything for the Spectrum...

TURBO INTERFACE—NEW LOW PRICE

Our unique Turbo Interface outperforms any Spectrum interface – it works with ROM cartridges, 2 standard joysticks, and there's a full expansion bus at the rear. The Turbo supports Kempston, Protek and Interface 2 software and loads from a cassette – or instantly from a ROM cartridge. It really makes the most of the Quickshot II's fast action, and with its unique power safety device and a new Reset button, it's even more amazing value at just £18.50.

QUICKSHOT II AUTO RAPID-FIRE JOYSTICK

The famous Quickshot II is the top games joystick, with a sleek trigger fire button for quick reactions, an auto fire switch for continuous shooting and a new, improved grip. Revolutionary built-in stabilising suction cups mean a sure, firm grip – a snip at £9.95.

SPECTRUM INTERFACE

Boost the power of your Spectrum, or Spectrum +. This Kempston-compatible interface gets the most from your games – electrify your enemies with real power and lightning-fast reactions right under your fingertips. Costs just £9.95.

SPECTRUM UPGRADE KIT

If you've a 16K Spectrum micro, this handy and inexpensive add-in kit boosts the RAM memory to a powerful 48K, so you can run the latest and greatest software, the most exciting games around – and expand your own programming possibilities! Only £21.95.

Where can you get your hands on Ram's amazing Spectrum add-ons? You can see them at branches of Boots, Menzies, Spectrum Group computer centres, and good computer stores everywhere. Or return the coupon below.

To: Ram Electronics (Fleet) Ltd (Dept YS), Unit 8, Redfields Industrial Park, Redfield Lane, Church Crookham, Aldershot, Hants GU13 0RE. Credit Card hot line: 0252 850085. (Access & Visa).

Please send me

- Spectrum Turbo Interface(s) at £18.50
- Quickshot II Joystick(s) at £9.95.
- Spectrum Interface(s) at £9.95.
- Spectrum Upgrade Kit(s) at £21.95.

OUT OF THIS WORLD!

SAGA SYSTEMS' HARDWARE

If you want the best for your Spectrum, ensuring it advances with technology, the Saga Systems' collection of keyboards and peripherals is essential. And they are all compatible with the 48K, + and 128K Spectrum.

THE SAGA 3 ELITE

"...Devastatingly smart... the opposition look like toys the best." - Popular Computing Weekly.
"It transforms the humble Spectrum" - Sinclair User.
"...will release the full potential of your Speccy... superdooper" - Your Sinclair.
At its new low price of £69.95 (Inc. VAT) the Saga 3, with its own number pad, is also ideal for the 128K Spectrum.

NEW 2001

THE NEW SAGA 2001

With its infra-red remote transmission, the Saga 2001 can be used while you walk around the room. No wires link it to the Spectrum. It has 101 keys. The Last Word software is available with it free, and it is simply out of this world.

PRICE £119.95 (Inc. VAT)

SAGA 1 EMPEROR

"...Good looks... works remarkably well..." - Sinclair User.
"...remarkable... value for money..." - Sinclair User Annual 1985.
"...particularly like the extra caps and symbol shift keys... brought the computer to life in quite an unexpected way..." - Primary Teaching and Micros.
PRICE £39.95 (Inc. VAT).

THE SAGA 10 PROFILE

With large enter key, full sized spacebar and printed keys, it has got to be good at £39.95 (Inc. VAT).

THE NEW SAGA 2+

"If I had not already seen the Saga 3 Elite I would have awarded the 2+ a Sinclair User Classic. As it is I'll simply say 'Well done, Saga'!" - Sinclair User.
And the price is only £54.95 (Inc. VAT).

SAGA SYSTEMS' PRINTERS

THE NEW SAGA GLP (Great Little Printer)

Only £199.95, the Saga GLP is a dot matrix printer with a near letter quality mode, a complete Epson character set, tractor and friction feed, and a centronics and RS232 interface. It is very compact and can print up to 100 c.p.s. Only £199.95 plus VAT.

THE CITIZEN 120D

A precision dot matrix printer with a 2 year warranty, the Citizen 120D operates at 120 c.p.s. in fast draft, or 25 c.p.s. in N.L.Q. It has Epson compatible graphics, tractor and friction feed as standard, an optional cut sheet feeder and is very compact. Further features include proportional spacing with many type styles and an exceptional 4K printer buffer. Only £235 plus VAT.

THE NEW SAGA DX85

Big and robust the DX85 is a heavy duty dot matrix printer which is made in the U.K. It prints at 120 c.p.s. It has a bi-directional logic seeking print head and centronics interface (RS 232 available). It has a draft quality mode and costs only £199.95 plus VAT.

THE LTR1 PRINTER

The LTR1 is a letter quality printer, 12 c.p.s. with centronics and RS232 interface and costs only £121.70 plus VAT.

SINCLAIR USER CLASSIC AWARD

SAGA SYSTEMS' PERIPHERALS

Microdrive extension cable. For use with your Saga 3. £9.95 (Inc. VAT).

Sound Boost. To put music in your ears (and television). £9.95 (Inc. VAT).

Dust cover. To keep your computer and Saga keyboard clean. £4.95 (Inc. VAT).

Centronics Interface. To drive your printer. £34.95 (Inc. VAT).

SAGA SYSTEMS' SOFTWARE

If you want to do more than just play games and require serious software with practical applications, then we have "The Last Word".

We believe The Last Word is the most advanced word processing package for the Spectrum. Just look at these outstanding facilities:

Standard commercial 80 characters on screen, over 60 commands, massive range of printer options, full on-screen help facility, full feature expression evaluator/calculator, over 24K text space in memory, compatible with tape and microdrive, wafer and: KDOS, BETA, Gordon and Opus disc systems.

PRICE: £13.95 inclusive of VAT
Send off now for full catalogue.

LETTERS

WHEN I GET OLDER

Don't know what to do... retired... 65 today — thought might as well write you rude letter. (Why not — everyone else does. Ed)

Used to like old magazine... not keen on this... full of old twaddle from nutty nippers... not to mention would-be jokey juveniles... all seem have one topic... keep rabbiting about spotty trains.

Glad to see you took on young Hartnell... not too hot on computers... much better at wedding dresses etc.

Even good old royal dressmaker made cock-up... issue 3 page 59.

My maths say $90+260=0=90+0$... your bloke says " $=90+260$ "... should've done calculations on Spectrum... not on sewing machine.

Please forward reward for putting you right to above... make any cheque payable to 'Carter The Magnificent'.

Yours thingummy etc
Charles Carter
Sidcup, Kent

Know what you mean... mag not what was... gone to dogs... White City mostly... just doesn't add up... specially the sums... printing letters without verbs... and no money for rewards! Ed

MINE'S A DOUBLE

I've found a strange bug in Fairlight. Near the start of the game, there's a room containing barrels and a descending staircase. While I was moving barrels Ivar became trapped. While trying to escape another Ivar appeared. Both Ivars were blocked. So, I used the scroll and both Ivars were transported to the courtyard. And although it's an empty screen neither of them could move and I had to abandon the game.

John McCleave
Poole, Dorset

Yesh, I've done exshactly as you inshructed and at firsh I had no luck. I'll have a drink to pass the time, I shed. Well, three fingers of firewater later and what did I shee — Ishvar One and Ishvar Two. And boy were they moving — shwaying all over the shop. Can't undershstand it meshelf! Ed

KUNG FU BLUES

To whoever can read properly at YS. (Bring in the cat someone... Ed). Hi there guys and gals, it's me again. Y'know, the kid who wrote in groaning about the fact that

there was no Congratulations message upon beating Tenth Dan in Way Of The Exploding Fist. Well this time the gripe is Yie Ar Kung Fu and stand by kiddies, this one's a dinger!

I played the game for twenty minutes before I reached stage nine, the Grand Master himself, Blues. Now it took quite a bit of pounding before I finally squished his grapes for good and he fell on his back waving his legs in the air (which seems to be a custom amongst defeated people). So, I sat back and waited for maybe a fanfare, a couple of beeps... anything. "So, what did happen?" I hear the entire readership of YS rise up as one man and ask. ("So what did happen?" The YS Readership As One Man). Zilcho, that's what. The game goes on to stage ten which is really the fat guy from stage one in disguise with a few more kicks up his sleeve. So I battled on, and on, and on, and on, and yawn until I reached stage 10! At which point I saw no reason for prolonging the agony and pulled the plug.

I'm coming round to the opinion that games just aren't worth playing if you don't get anything out of them. I'm not asking for our Cliff singing Congratulations at the end of each game. But what's wrong with a simple beep. I ask you!

Andrew 'when will he stop beating games' **Hunter**

Battersea, London

Okay, let's have a reader's poll on the best ending to a game. Is it Willy with his head down the loo? Or the evil Elvin Atombender at the end of Impossible Mission? Or the ghostly ghoulies going to ground in Nightshade? Or maybe you reckon that it's only ghastly Commie owners who need a pat on the head and a constant accumulation of brownie points to keep 'em concentrating. Remember there's a YS badge waiting for the best letter on the topic. Ed

LIZARD LIMERICK

*There was a young reptile from Ocean,
Who made a great fuss and commotion:
The reason — a silly one,
She'd been called an amphibian,
And she'd told them that she was reptilian.*

Yes, I claim a Trainspotter Award for this inexcusable boob. (You'd better get some red dust quick or Diana will probably ensure that there are no more issues of YS!) I am, of course, referring to the V preview in which Diana is described as 'the amphibian who'd been the Visitors'

ambassador'. Now come along, everyone knows that you can't be both a reptile and an amphibian and the Visitors are definitely reptiles.

Having got that off my chest — ugh, don't know what it was doing there in the first place — o'ld loike tuh say 'ow much oi enjoyed yur mag. 'Twere first toime as what o'ld bought it, 'twill not be the larst. (Dun wonders for yur Inglish too, o'lm 'appy t'see! Ed).

Garry Lancaster
Downend, Bristol

You're right about the reptile
But stop and think for a while,
If you look at me,
I think you'll agree,
Amphibians are much more my style. Ed

SLEIGHT DELAY

I'm one in ten million 'cos I have won a Trainspotter Award. My friends all think I'm a superhero. "Wow" they say, "We've seen your name in YS. Cor, bet you're dead chuffed sitting there just looking at the spot on the wall where you've got it framed." I just um'n'arr. And d'you know why I um'n'arr. (A speech impediment? Ed). 'Cos I haven't got a certificate to look at!

Is all this sham I have to suffer part of the test to prove that I'm truly fit to have the award bestowed on me?

Please, please, please send me my certificate. The postie is getting sick of me grabbing him by the scruff and accusing him of popping it through the wrong door. If I have to wait any longer the doctor's going to take me off the tablets. I can't go on like this — life's getting on top of me. I'm starting to take it out on my Speccy and it's not its fault. My

hands are all of a shake, my typing is suffering, my family is suffering, I'm suffering. HELP.

M Sleight
Bentley, South Yorkshire

PS Do you want me to send the postage or summat?

Well, every little helps, of course . . . I'd like to blame this terrible delay on your Trainspotter Award Evaluation Department, but we haven't got one. I wouldn't mind laying the blame on the recent postal strike . . . but there hasn't been one. Even British Rail would do as a scapegoat but for the life of me I can't think why it'd be their fault. No, there's only one thing for it — I'm gonna have to bite the bullet and lay the blame on the one person who is responsible. That's right I'll have to come clean. It was . . . Troubleshootin' Pete. Why haven't you sent out the Trainspotter Awards, Pete? Ed. Um, Arr... T.P.

BOUGHT IT SKIPPER

Has anyone else come across the annoying bugs that probably make Spitfire 40 impossible?

The flying hours that are displayed never get past 59 minutes — the hours always remain at zero. Also, in 'practice' mode, the flying hours aren't added on as it says in the instructions.

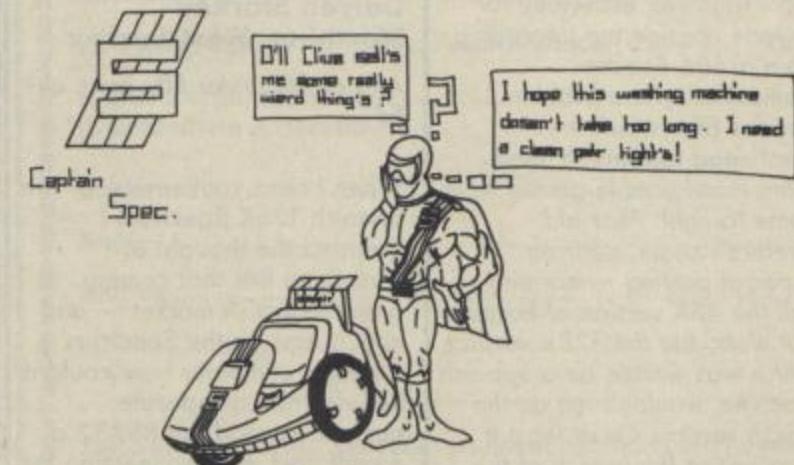

Since medals and ranks probably depend on flying hours, I can't see any way of climbing the ranks. Is it just my copy or a standard bug? I've been aloft for hours without so much as a rise in rank.

David Leitch
Methilhill, Fife

Cer-ikey. Sounds like Gerry's sent in the gremlins, skipper. Better get on the jolly old

DOODLEBUGS

Keep on doodling — it's a doddle! Send your cartoons to Doodlebugs, YS, 14 Rathbone Place, London W1P 1DE. There's a prize of a new game for each cartoon printed.

LETTERS

blower to Mirrorsoft, what? Crackle, hiss, Roger, hiss, hiss, crackle, over, hiss and out. Seems that the first batch of 200 to wing its way out of Mirrorsoft did contain a fault. The hours displayed on your instrument panel show only the minutes, not the hours — until you've clocked up four hours flying time. But although it doesn't show them, the program is aware of your progress and should reward you with a higher rank when you've earned it. Medals, by the way, are dependent on the number of kills you make.

If the bug bothers you, send your copy back to Mirrorsoft, who've promised to replace it for you. Okay, old chap? Briefing over. Ed

12 'ATE

I've just bought a Spectrum 128!

I'm quite satisfied with the improvements except (here we go) for one or two 'bugs'.

There's still no joystick port and in 128K Basic mode, you can't use the Basic command keys.

Other than that I find that the sound quality is on a par with the (spit, spit) Commie 64 — really fantastic. And the on-screen menu with its five modes (tape loader, 128K Basic, calculator, 48K Basic and tape tester) is really something.

If Sinclair keeps up this standard, what will come next?

D G Ward
Sinfin Moor, Derby

PS The loading time for D.T.'s 128 Supertest took only thirteen minutes.

PPS Are there any books on the 128 yet?

It's good to hear from a satisfied customer. Everyone at Castle Rathbone is equally keen on the 128 with one or two qualifications. At £180 it's too expensive, especially for anyone considering upgrading from a 48K Speccy.

Compatibility is a problem. Besides Elite which we mentioned last month, many more incompatible games have come to light. Poor old Firebird's come in for an especial pasting — not only will the 48K version of Rasputin not work, but the 128K version, which was written on a Spanish machine, wouldn't run on the British version. Or at least it wouldn't at the launch of the machine. And yes, there should've been a joystick port — after all, the computer's

being marketed here as a games machine. Sinclair Research argues that there's no industry standard but that's just not true. It's just that the standard is not the one set by Sinclair but by Kempston. Anyway, here are a few of the things other readers would've welcomed. Ed

I've just seen Uncle Clive on the telly grinning with his 128K Speccy. Hmmm, could have been improved, I thought to myself when I read about it in the paper the next day. How about pixel attributes? That was the major let-down of the original Speccy. It would've only taken 18K which is (quick calculator out) 14.0625 per cent of the new Speccy's memory. And shock, horror the keypad's sold as a peripheral for £19.95. That's grossly overpriced for something that's almost useless.

D Garner
Harrogate, Yorkshire

Has Clive got it right? By this I mean the Speccy 128. What every self-respecting owner clamours for are the following — professional keyboard, Centronics and RS232 ports, dual 9 pin joystick ports, RGB output, disk drive storage as standard, mouse and touch tablet connections, proper hires screen with no colour attribute problems, massive one megabyte RAM, multi-tasking capabilities, true hi-fi sound, midi interface, full extended version of Basic, other languages available on ROM, CPM compatibility, dual processor, user definable keys, direct modem communications, text to speech conversion, voice recognition, full control of processors via assembler/disassembler/monitor ROMs, bubble memory, GEM type management system, analogue port, reset switch, light pen connection, user port, various packages such as business and art programs (Uncle Tom Cobbley? Ed); of course, not necessarily in that order.

Darren Starkey
Worthing, West Sussex

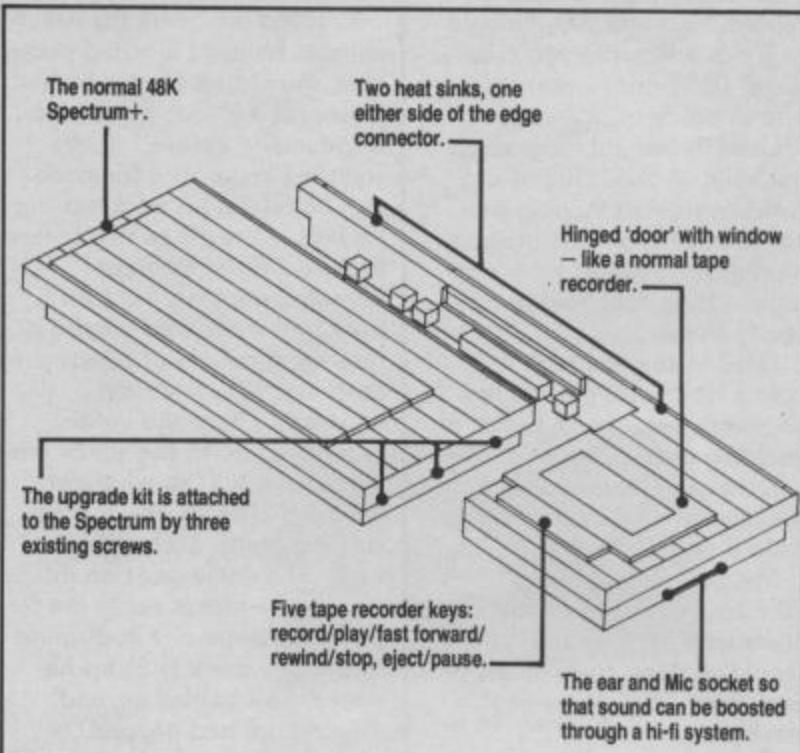

And all for under fifty quid, eh? Ed

When I read your review of the Spanish 128K Spectrum I dreaded the thought of something like that coming onto the British market — and now it has! As the Spectrum is a games computer how could it benefit from a separate numeric keypad, an RS232 or a midi port, or a connection for an RGB monitor? Okay, so Sir Clive's got some things right, like the sound coming out of

the television speaker, but here's a picture of what I'd have rather seen.

Alexander Liddell
Edinburgh, Scotland

Now I wonder where you got that idea from? Perhaps it should be called the Specstrad! Still, it's interesting that no-one's asked for a built-in monitor. Ed

BABEY TALK

I'm writing because of an itty bitty problem with Rambo. Every time I get to the despicably dirty commie copier I shoot it and the game crashes or NEWS itself. Please can you help?

Stevey Babey V.C.
Hawick, Roxburghshire

I have a copy of Rambo and when I try to shoot the Russian helicopter the game crashes. I returned the copy to the shop and the new copy does the same. What can I do?

Chris Walker
Thurcroft, S Yorkshire

I dunno, some people are never satisfied. First you want an ending and then when you get one you're still not happy. This one does sound like a Commie plot — perhaps the next 'reader' had a hand in it. Ed

You may be surprised to know that I'm not a Spectrum owner. In fact, I'm the exact opposite, a Commodore 64 owner and damn proud of it! I don't make a habit of writing to or even reading Spectrum magazines but as I was flicking through my Speccy friend, Craig Gallagher's copy while I was waiting for one of his games to load (yawn) I came across the most slanderous, offensive and deeply disturbing letter I have ever seen. Or rather it was the reply to the letter that shocked me.

Briefly there was this boy who didn't know whether to buy a Spectrum, a C64 or a

Beeb, so his friend wrote to your magazine asking for advice on how to persuade him to buy a Spectrum. And that moron who's in charge of the letter section (Who he? Ed) dared to say the choice was easy as the Spectrum had the best graphics, the best games, in fact the best everything! This is completely untrue — have you gone completely bonkers?

I will now simply state some facts that no-one can argue with.

- 1) The Commodore has a SID chip which can create the most amazing sound effect...
- 2) Commodore graphics and colours are among the most outstanding, if not the most outstanding in the home micro market, while the Spectrum has jerky, flickery sprites.
- 3) The Commodore may not have as wide a selection of games as the Spectrum but it makes up for this in quality. I draw your attention to Hypersports, Way Of The Exploding Fist and Monty On The Run while the Spectrum can only boast such games as Horace Goes Ski-ing and Chequered Flag... (That's it. Pass the red pen... there's another three pages of these 'facts'. Ed)

Mark Devlin age 14
Troon, Ayrshire

I'm staying out of this but you can thank me for not printing your full address. You never know, you may just reach 15. Unless, of course, your Commie friends see your shiny new Your Sinclair badge. They'll think you're a defector, not just defective. Ed

SUBSCRIBE NOW (OR WE SHOOT THE EDITOR!)

Ed's days are numbered! Masked marauders burst into the YS office and carried him off to a grotty room somewhere in the Isle of Dogs. We've received a ransom note saying that YS readers must subscribe to the magazine or the Ed gets it!

Now £15 is not much to ask for a man's life — even if it is only our Editor — so please, send in your subscription or the post of Editor will shortly become vacant. How can you resist with this picture tugging at your purse strings?

Send your subscription (sorry — ransom money) to Your Sinclair Subs, 14 Rathbone Place, London W1P 1DE.

(Then again, but only if you send in enough subscriptions and ask nicely, we could just get them to shoot him anyway.)

SUBSCRIPTIONS: PRIORITY ORDER FORM

I would like to subscribe to Your Sinclair. Please start my subscription from the issue.

Please tick appropriate box:

RAMBO

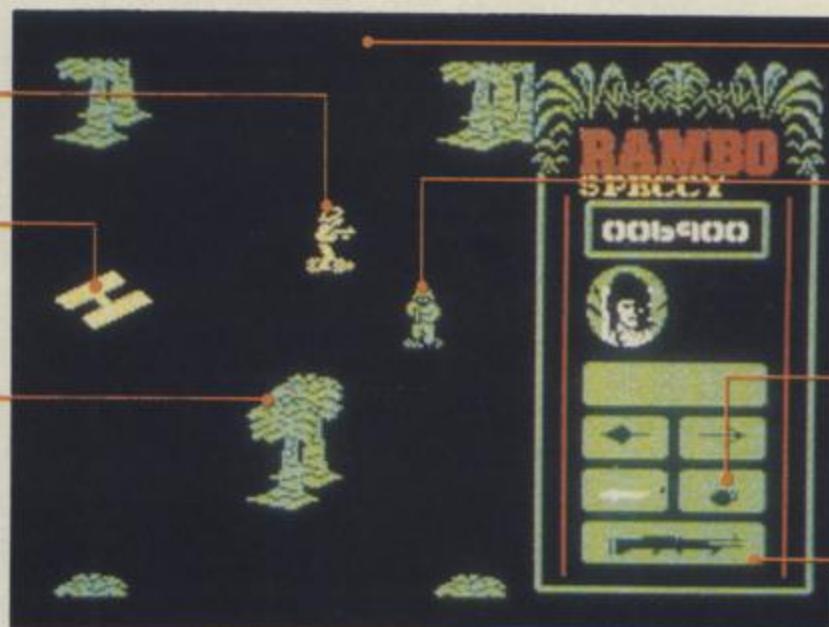

Counter-intelligence by Phil Golders of Piddletrenthide

Run like blazes and you may not have to fire a shot. Serpentine running (zig-zag to you, smartass) is the order of the day. Top o' the world, Ma!

Watch for a big H, as this is where the chopper'll land. You've got to make your way back here with your buddies and wait for a lift outta here. Memorise this spot when you find it — that's not too taxing, musclehead!

Hey, guess what? When you get a rocker launcher you can nuke the trees as well. Big deal. No really, it can be handy if there's a slimy Commie (no, not a 64 silly!) hiding behind one!

• Ratty-tat-tat. The machine gun is an essential piece of kit for any aspiring Rambo. Find it north and east from your start position. Neutralise them Commies, soldier!

The POW camp is to the north. That's where your buddies are being held.

Don't shoot everything that moves, as you'll attract attention to yourself. (Somebody tell that to Stallone!) One shot and the whole flippin' army will be on your case! Gung-Ho!

Utilise the grenades carefully, as their trajectory is a little hard to range accurately. Not for close combat! Who is this Schwarzenegger anyway?

The rocket launcher is good for posing after you've oiled your muscles. But it also comes in quite handy when you're in the chopper. Find it to the north. Go for it, blockhead!

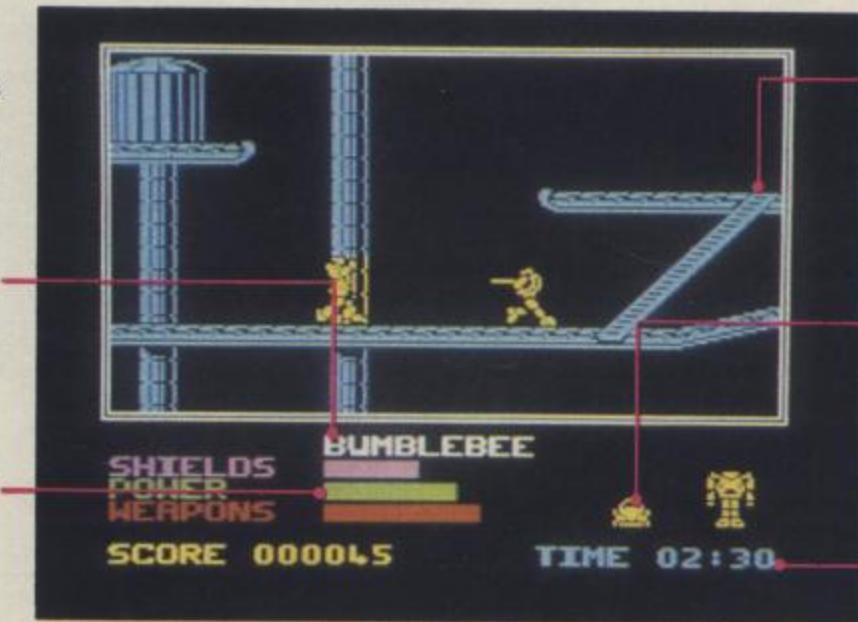

TRANSFORMERS

Tints 'n' hips by your everlovin' Hex himself.

Flying up and over the planet's surface is faster and safer than trying to walk out. Fly whenever you can, especially up and right — you'll find a puzzle piece on top that way!

Deploy your troops with care. Spread 'em around the surface so you stand more of a chance of finding puzzle pieces.

Recharge regularly — your shields will soon wear down if you don't! It's also nice to have a breather occasionally, or change characters.

Beware low flying — you can easily bump into a piece of platform hiding just out of screen. Many's the time I bumped into one of those floating ones by not concentrating!

When faced with two adversaries trying to sandwich you, transform into a vehicle and barge through one of them to freedom. That way they'll shoot over your head.

When you're recharging or reloading in a defensa-pod, the timer stops. Hah! A good time to rearrange your forces or concoct a fresh strategy? You betcha!

SABOTEUR

Intelligence by James Slater from York

Big brother's watching you. The video cameras follow you around and fire at you.

Here's the weapon you're carrying. Although using a weapon to kill a guard scores fewer points, it's safer than punching or kicking him!

Energy level. It's best to keep an eye on this, especially with those guard dogs roaming around. To restore your energy, go to a room where there are no hazards and your energy will build up.

Here's looking at you, kid. As soon as you come into the room, watch the guard — he'll come towards you and either kick you or throw something. But if he holds up his arms, duck 'cos he's ready to take a pot-shot at you.

Watch the top or bottom of a ladder before climbing onto it — there may be a door blocking it. You can eventually open these doors by accessing the computer.

It's the cash that counts — your score is measured in sponduliks. You score points for killing guards, but you'll get nothing for knocking off the dogs. Still, if you want the RSPCA after you, press Down and fire.

BOMB

JACK

Elite/£7.95

Rachael What sort of being is Bomb Jack? He doesn't so much fly as leap around. And he's no more than knee high to a grasshopper. Come to think of it, a grasshopper's what he most resembles. So what sort of hero is this bounding, bomb collecting midget? The answer is an arcade hero — and now he's let loose in your micro courtesy of conversion kings, Elite.

Let's just say that *Bomb Jack* probably shouldn't be as addictive as it is. After all, arcade games are designed not to last too long because they're always greedy for the next meal of ten pences. But then again, they're also designed to make you want to play again... and again and again and again. And that's where *Bomb Jack* scores, because each time you lose your final life you're convinced that next time you can clear that screen.

Here's how it works. Your caped crusader bounces all over a world provided with convenient platforms. You launch him into the air with a quick press on the fire button, trying to pass over bombs as you fly. Clear a screen of explosives and on to the next,

more difficult location. The forces of evil are out to stop you though, from the first flapping bird to the little soldiers who eventually reach the ground to metamorphose into something much nastier.

All of which neglects to mention the scoring. There's a fine bit of strategy involved in maximising your points — and if ever there was a high score freak's dream, this is it! The first thing to know is that a bomb that's fizzing is worth 200 rather than 100 points. Collect one of those and it sets off the next one in the sequence, so a row of four can be worth 400 or 800 points depending on whether it's ignited or not. It's up to you to plan a route. There are special bonuses for collecting 20 or more sparkling bombs and there are also Bonus coins that float in for you to snatch, plus Extra lives coins and Power balls. These paralyse the nasties for a while letting you eliminate them — very useful when air space becomes too full to fly with comfort!

Bomb Jack, it must be said, isn't the easiest little critter to control. Getting him up is simple, but then you'll need your wits about you to steer him as he speeds around. Left

and right swerve his flight while an extra boost of height comes from pressing up and a speedier descent is aided by down. If you need an immediate halt while in the air just hit the fire button again, and rapidly tapping it will make him hover. You'll need lots of practice to get your pilot's certificate though — and a joystick won't do any harm either! While Elite has considerably included a turbo mode for the keyboard player — it simulates a constantly-pressed fire button — a stick makes life much easier.

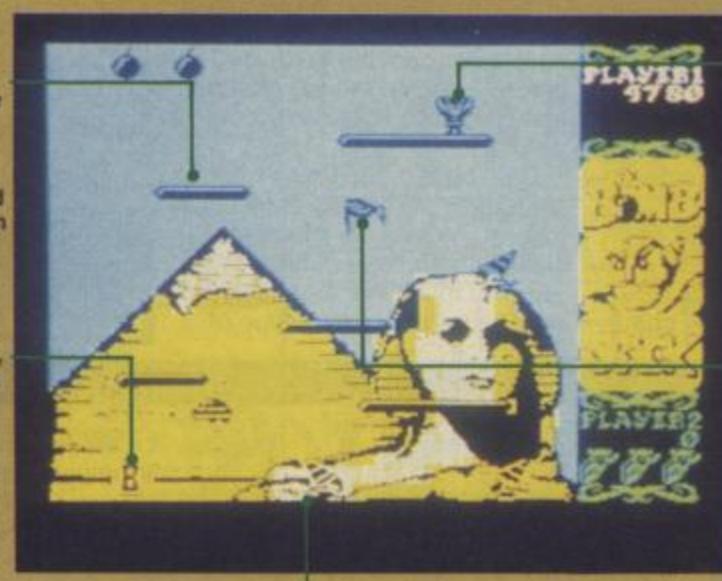

There you have it, then — a simple idea that's one hundred per cent addictive. The graphics are great with an amusingly animated sprite for your heroic mite, even though the monochrome figures are sometimes a little hard to see against the coloured backgrounds. Amplify the sound to get the most from the spot effects and you too will soon be battling to get your name in the high score table. *Bomb Jack* is most certainly a blast!

9

The guards are restricted to strutting around as they make their way to the ground, pacing up and down the platforms, making landing tricky. And they also appear up here in this corner, which is a distinct nuisance.

Here's a bonus score coin, floating in to let you boost your points for the screen — but beware because collecting too many of these will stop the supply of further useful coins!

When you reach the ground the guards reveal themselves for what they truly are — worms. And unluckily they can fly. Even worse are the bouncing balls. The only thing to do at a time like this is to pray for a power pill that'll freeze them so you can eat them.

Here you are, jumpin' *Bomb Jack*, the all leaping hero. Remember, kids, *Bomb Jack* can't fly... unless he's on solid ground. Once you're on the way down there's nothing you can do until the next jump. What a boulder!

This vulture's always the first peril to appear on screen and it's clever enough to move towards you so you can't stay in one place too long. Luckily it's also slow.

To help you get started here's a route round the first screen to maximise your score. Row A means bounding from between the bombs below to leave them till later. Don't go too high for row B or you'll get the bomb in the top right hand corner too early. Getting across to C can cause problems — best bet is to wait for a Power Pill and eliminate the enemy. Similar problems will occur with D but E shouldn't be too bad. Watch out for ground forces on row F though and then up, up and away to G, collecting the bombs from right to left. Achieve all that and your score will be doubled, plus bonuses, so you'll be surrounded by people wanting to know you, asked out to parties every night, kick sand in people's faces....

SCREEN SHOTS

The gamesplayers they couldn't tame
— Max Phillips,
Rachael J Smith,
Rick Robson, Luke
C and Gwyn
Hughes — return to
review all the
latest releases.

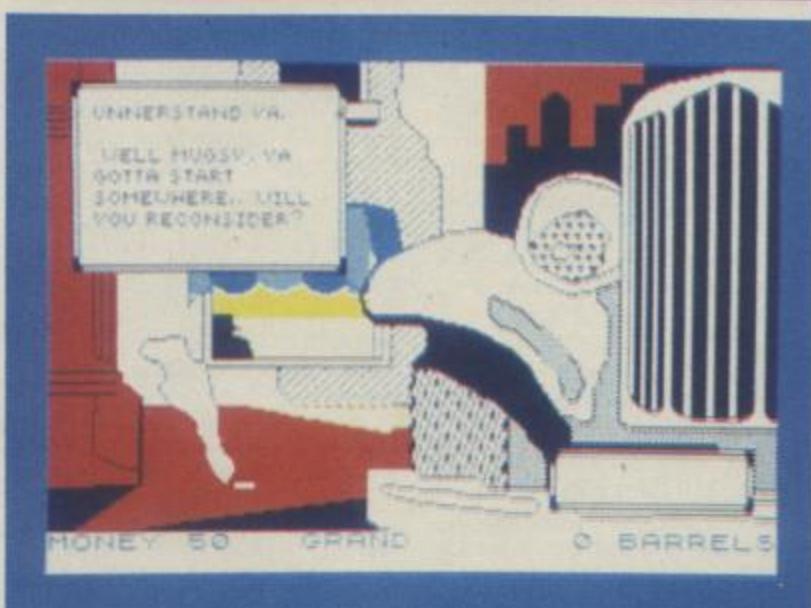

Melbourne House/£8.95

Rachael Hey, boss, come quick — I tinks I got news for you. You know dey said Mugsy was expected back in town. Well, here he is. An' you said you toit he was never comin' back.

Seems he ain't exactly got smart while he wuz in de slammer. Oh sure — yes — he still looks great as ever. A real snappy dresser — but, boy, does he take forever to look pretty as a picture. You'd tink nowadays that they could hide all de time he takes to appear in public. Reminds me of how dat Hobbit gang used to just sorta get filled in whenever dey came on de scene — hey boss? Hur — hur — hur!

Yeah, but lookin' good don't make up for a lack of brains, like you always tell me, and Mugsy's commands remain strictly monosyl.... monosyl.... one word at a time. You see, he tinks de smart ting to get into is booze, and he's got dis henchmen who says tings like 'How many boys da ya wanna hire, 0, 1 or 2?'. Ha, da dummy can't even speak good English! So Mugsy sits dere, mumbling dese answers wid all de chutzpah of Marlon Brando on downers, an' dependin' on his decisions he can watch his fortunes grow or go.

Of course it's never so simple as dat and dere are rival gangs to be considered and booze parlours to buy and molls to keep de customers.... satisfied. And even though he's payin' off de Feds he'll still get trouble if they're not satisfied. Seems dis sidekick of his ain't too hot wid a rod, so Mugsy has to do all his own shootin', and' hang me, if it ain't like some penny arcade amusement, and none too difficult at that. Then it's back to de day to day of deciding

whether to rub out the opposition an' de rest.

Well, in no time a year's gone by and the financial report comes in, then it's de edited high spots on the annum's quota of capital offences. No, sorry, boss — even dat ain't so good as it sounds. In fact it was the same

as last year an' the year before. Hey — I tell ya, after da first few times I got really bored wid it.

Hey, boss, I can't help feelin' old Mugsy ain't really come that far. Maybe we should go show him de error of his ways — if you follow my meaning. He may have had a novel type of

MUGSY'S REVENGE

business strategy once but now it's just as mechanical as any board room decision makin'. And like youse always says — rubbin' out people an' booze an' everything is lacking in couth. Now where's dat new modem youse got so we can hack into da Federal Reserve and make some real money, kid?

Graphics	Playability	Value for Money	Addictiveness
7	7	7	7

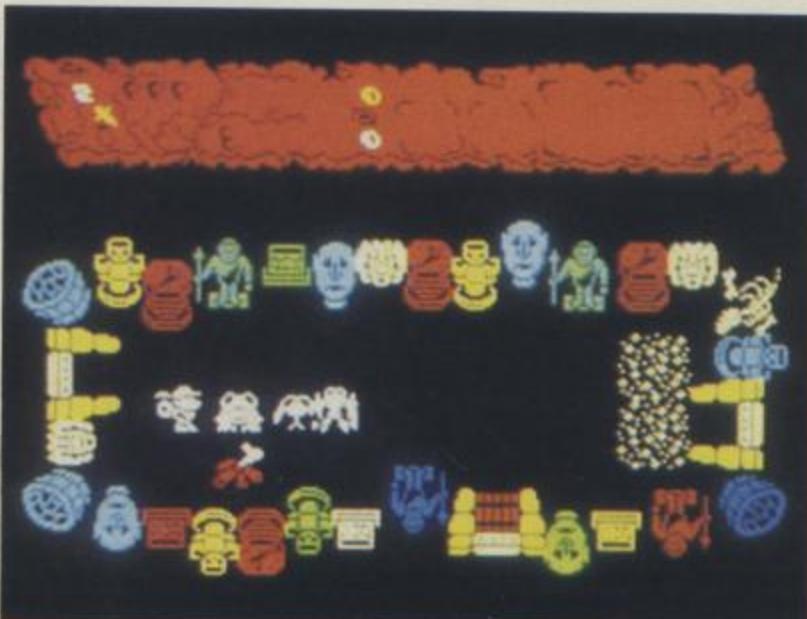

Budget/£2.99

Luke It's back to the atac on the atic with this game.

Based very roughly on the concept of Ultimate's game, the idea is to move your man about a maze of rooms, avoiding the usual crowd of nasties. You're able to fire what look like sea-gulls at the oncoming masses, but it does little good as they re-generate instantly and throw themselves back into the fray. Doors lock behind you and then just as suddenly re-open; little electronic pings announce that you have found a rare treasure — oh yes, the excitement fair plods along!

The basic plot revolves around the search through a maze for nine parts of a scroll that provides the route to the exit. The maze is split into five sectors and certain objects are required before you can pass

LABYRINTHION

between these sectors. Various controls are available for protection, but by far the most useful keyboard control is the 'Pause' key.

The main problem with the game is that the area of action is just too small — trying to sort out your character's sprite from the fluttering mass of enemy followers is just ridiculous.

With a lot of patience and a meagre wallet, of course this game is adequate — indeed, with a 256-room maze to explore, it should keep the most avid map-maker happy for hours. But, with so much well-conceived software around of this type, *Labyrinthion* stands little chance of becoming a classic.

Chart Chat

What's rising to the top? What's bubbling under? Chart stats 'n' facts from Steve Colwill.

Chart Chat 5

Looks like the bottom's dropped right out of the market! Or at least, the bottom five from last month have dropped right out of this month's chart and last month's top four have all taken a tumble downwards. And it's interesting that all of last month's top four have dropped by the same number of places and so retain their rank order within the top ten.

This month's number one, *Movie*, has taken the chart by storm, coming straight in from nowhere to take the pole position. The only riser from last month is Mastertronic's cheapie but goodie, *Spellbound*. And other new entries include *Barry McGuigan World Champions*, *Zoids* and *Gunfright*.

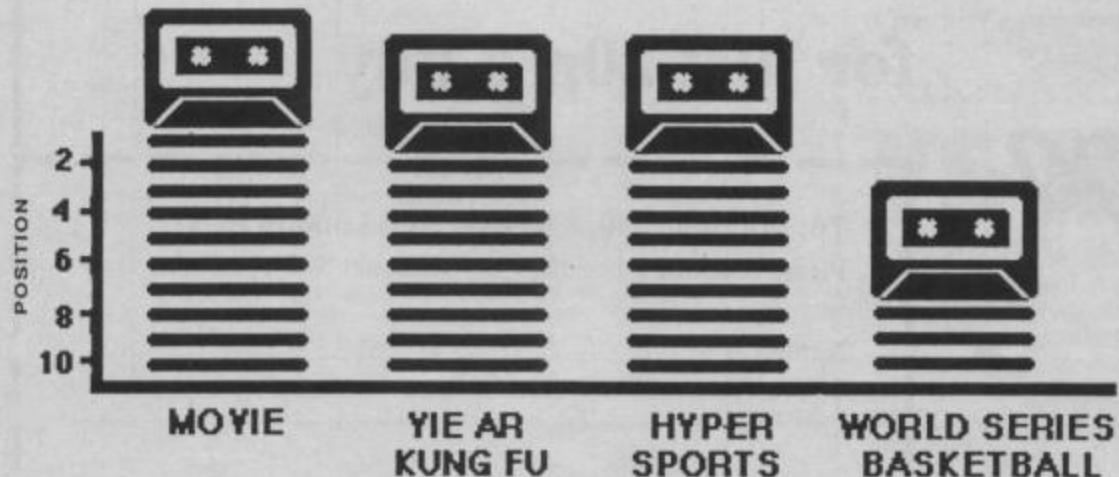

Imagine's *Hypersports* makes a welcome return, propping up the rest of the chart at number ten.

This Month's Top Ten Titles

Position Last month	Weeks in Chart	• Title/Publisher
1	— 1	• Movie /Imagine
2	— 2	• Barry McGuigan World Champions /Activision
3	5 6	• Spellbound /Mastertronic
4	1 7	• Winter Games /US Gold
5	2 8	• Rambo /Ocean
6	3 11	• Commando /Elite
7	4 10	• Yie Ar Kung Fu /Imagine
8	— 2	• Zoids /Martech
9	— 2	• Gunfright /Ultimate
10	re 8	• Hypersports /Imagine

Imaginative Games

Imagine's back — and how! Okay, it's just an Ocean label now but the company name's riding high at the moment with three titles in the top ten. This chart shows the highest positions attained by Imagine's last four charting titles.

This chart is based on the MicroScope chart as compiled by Gallup.

MicroScope GALLUP

MicroScope is the weekly trade paper of the microcomputer industry. If your computer store doesn't display the latest MicroScope chart, ask the manager to call Mark Salmon on 01-631 1433 — we'll send a copy every week.

12 Months Ago

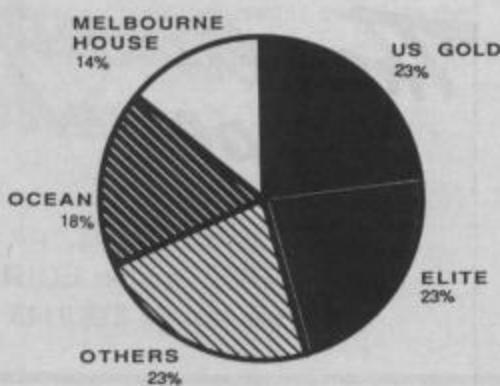

Position	• Title/Publisher
1	• Ghostbusters /Activision
2	• Day /Ocean
3	• Airwolf /Elite
4	• Technician Ted /Hewson

8	• Lords Of Midnight /Beyond
9	• TLL /Vortex
10	• Mugsy /Melbourne House

Slicing The Company Cake

Take a look at this pie chart and you'll see how the number one honours over the past five months are shared. US Gold, Elite and Ocean take the biggest slice — each of them has had titles at number one for five weeks.

ROMANTIC ROBOT

present

56K Spectrum extension? Instant back-up of any program?
Joystick & video interfaces? YES! All this & even more with
Nº1 SPECTRUM MULTIPURPOSE INTERFACE

Multiface ONE Version '86™

UNPRECEDENTED - UNPARALLELED - UNBEATABLE

at £39.95!

* Internal 8K ROM and 8K RAM open new concepts in Spectrum computing: 100% reliable saving of anything, anytime and onto all types of peripherals with extra 8K at user's disposal and with a full peek & poke facility covering the entire 56K.

MULTIFACE ONE does not take any part of Spectrum RAM & does not need any additional software. Just push a button to freeze a program, save it and restart from the same point next time. Peek/poke facility and 8K RAM (say with a monitor disassembler) are also ideal for studying, modifying, developing programs.

* Menu-driven with prompts & one-touch commands: 1) Push button 2) Select function: exit/return/save/poke

3) Input name 4) Save to: tape/cartridge/wafer/opus/beta

* Extremely powerful & efficient compressing for fast re-loading & using minimal room on cartridges, tapes, wafers, disks. A 7K screen can be compressed to a few hundred bytes, the whole RAM into a few K (depending on a program).

* Option to save a full 24-line screen only * Pressing the button & return can restart a "crashed" computer

* Through extension bus for connecting other peripherals * User friendly, fully error trapped, simply magic

* Users must ensure the copyright laws are not infringed

Expand your Spectrum to 56K and stretch its capabilities even further with

Sports simulations

"A real challenge to the thinking football fan... Bobby Robson could do worse than have a crack at this in his preparation for the World Cup".

AMSTRAD ACTION
REVIEW Jan '86

QUAL-SOFT COMMENT: At last an INTELLIGENT management game for the knowledgeable soccer enthusiast!

TAPE 1
QUALIFIERS

MEXICO '86*

TAPE 2
FINALS

A WORLD CUP MANAGEMENT SIMULATION

Summer 1984 and English International football is at its lowest ebb. We have failed to qualify for the European Nations Cup, and had a string of very poor International results. In a few months we will set out on the '86 World Cup qualifying trail. You have been given the most important job of restoring English pride in their football. You have a match in Paris, the USSR at Wembley, and a South American tour, to assemble a team, first to qualify, and then to beat the world's best in Mexico.

TAPE 1 (Qualifiers)

- ★ Current squad of 16 players + 20 user defined players.
- ★ Friendlies in Paris, at Wembley + South American tour.
- ★ ANY team formation you choose. 2 from 5 substitutes.
- ★ In match tactics: any no. of individual player adjustments.
- ★ Your qualification group: full results and table.

TAPE 2 (Finals)

- ★ Choose a 20 man squad to take to the finals.
- ★ Group of 4 prelims, 16 to final knockout comp.
- ★ Extra Time, PENALTY SHOOT-OUTS, where relevant.
- ★ Formation and strength information on opposition.
- ★ 2 from 9 substitutes (the FA tells us so).

ENGLAND'S GAMES: FULL PITCH, 22 MAN, 3D GRAPHICS & SOUND EFFECTS

QUAL-SOFT comments: With 5 levels of play, 12 depths of sophistication, and "fun" graphics, this game can be enjoyed by an 8 year old youngster as a "fun" game, and by the most sophisticated as a tactical/strategy challenge of the highest order.

PACKAGE: Tape 1 plus Tape 2 plus 20 Page Manual in "Video Cassette" style pack. Only £9.95 (90K RAM usage. Some would call this a MEGAGAME. YES IT WILL RUN ON YOUR 48k & 128k SPECTRUM).

QUALSOFT GUARANTEE: Sent by 1ST CLASS POST on day of the order with P.O., Cheque, Access payment is received. Telephone Access orders accepted.

The software way of transferring Spectrum software. 4 utilities for m'drive, 2 for waferdrive, 2 for Opus Discovery. Invaluable for cartridge/disk maintenance & automatic transfers. Highly professional, user-friendly, versatile and comprehensive. An ingenious piece of software.

***** Features ***** Performance PCN

TOP SOFTWARE AT BOTTOM PRICE

Wriggler

One of the best games for any machine I've seen for very long time. Wriggler is a totally original game. CRASH SMASH STAR GAME PCN Great game, good music, well recommended. What Miles The graphics and sound are excellent and the game is totally addictive. 10/10 value & playability, 9/10 graphics & sound. C & V Games This is a great game. CAS Well worth buying. ZX C & Crash If you've any sense you'll order your copy now. PCW A WINNER PCW

NOW FOR AMSTRAD!! SPECTRUM version at Xmas PRICE!

MUSIC TYPEWRITER

Complete Spectrum music system for writing, editing, playing, printing & storing music. Its real notation graphics and ease of use make it an ideal educational tool. Great fun to play with & a lot to offer in serious use (transposing, dot matrix printout etc). A very professional piece of programming, easy to use, excellent screen presentation, error trapping & helpful prompts. If you're interested in music and own a computer then get it.

ZX Computing

MIDI compatible with MIDI MUSICIAN package. New overlay for Spectrum. Now at Xmas price!

SAI COMBAT

Mirrortsoft/£7.95

Gwyn There is probably an ancient Japanese proverb that says a man with a big stick can have more fun than a man without a big stick. And that is the philosophy behind *Combat*, a marriage of the unarmed martial art with broom handles, that Mirrortsoft is using to make a late bow into the arena.

Sai is more like *Fighting Warrior* than *Exploding Fist*, owing to the use of weaponry. But while the ancient Egyptian game of clobbering each other with staves (or were they supposed to be swords) boasted a plot — albeit a fairly feeble one — this is much more pure combat. Your aim is to attain the highest dan via three falls.

Control is the pretty well standard eight points of the compass with or without fire, which makes joystick control preferable to keyboard. Some of the moves will be recognisable from kung-fu games, including everybody's favourites, the roundhouse and flying kick. The new dimension comes from the jabs and sweeps with the pole, which gives you extra reach plus an additional form of defence. It always takes a while to learn the capabilities of your fighter but when the controls are sensibly arranged, as these are, it soon becomes second nature.

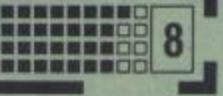

So far, so good, if a trifle unexceptional. What sets *Sai Combat* apart from most of its predecessors is the size of the

combatants. While not quite so large as the figures in the first of the martial arts games, Bug Byte's *Kung Fu*, they are bigger than usual. And yet there doesn't seem to be any loss in speed and the animation is excellent. You don't even feel cramped with relatively less horizontal space and I found that involvement was greater.

The finish of the game is superb, with detailed shadows below the figures and a nice oriental tune, plus different backgrounds for different belts. Blows are accompanied by a suitably hard 'thwack!' sound and a coloured starburst of pain — well hard. If you lose a series of bouts you don't need to go back to white belt — pressing space starts you again at your previous level. The various dan are well graded, starting easily enough but getting tricky around grey belt. Naturally there are one and two player options — the latter is useful for practice against a static opponent.

Sai Combat is a good, if belated, entry into the genre. Whether you want it will depend on how keen you are on the type of game. If you don't reckon you've had too much already it'll certainly present some welcome variety without risking any unpleasant bruises.

THE DEVIL'S CROWN

SHOW JUMPING

Alligata/£7.95

Rick What do you get if you cross a kangaroo with a sheep? Yeh, a woolly jumper. But there's nothing woolly about this show jumping game that'll leave the family hoarse with delight.

The game is simplicity itself and works precisely because of that. You and your sturdy mount must negotiate a jump ring. You're given a choice of eight mounts, two levels of difficulty, the game has six different courses and up to eight players can take part.

Pre-jump you are given a course map — worth remembering when best speeds are wanted. You're then given one hundred seconds to complete the

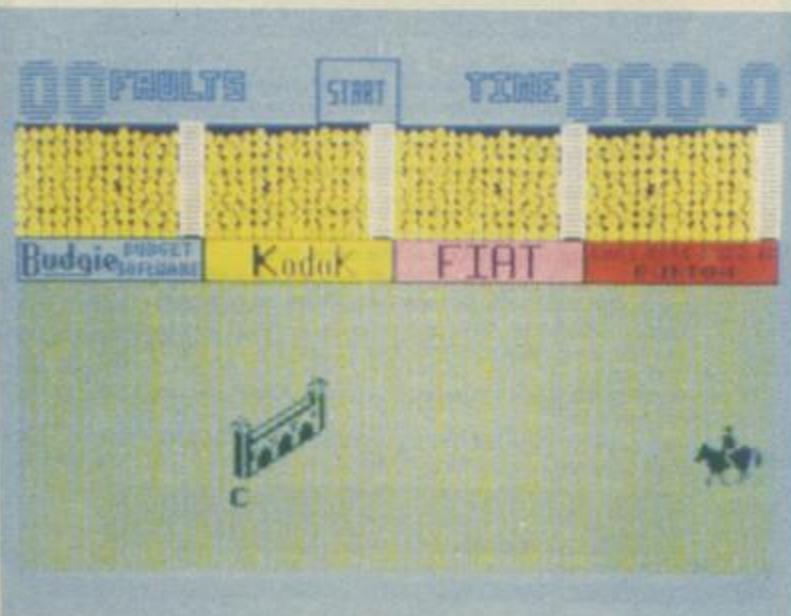

Mastertronic/£1.99

Max Ahem, how can I put this? If you're tired of gaudy, chunky sprites that turn funny colours when they pass over each other ... if the very thought of forty rooms stuffed with killer fish makes you want to run and put your head down the toilet ... if you've been collecting objects since your grandmother learnt to suck eggs ... if I've already put you off, then a little polite advice. Push off ... this is a great game.

Legend has it (the sort of legend you get on Mastertronic inlays) that pirates, having secured the Devil's Crown, try and remove the seven jewels thereon and are suddenly struck down by the devil himself. Their ship and its many treasures lies untouched until you, as a diver-come-submarine, attempt to recover the goodies. And just in case seven jewels is too easy, you've got to grab all sorts of stuff first to prove that you're up to the job.

You plunder and blunder your way round the brightly coloured and crowded rooms, avoiding the nasties or shooting them with any pistols you pick up. Keep a watch on your oxygen ... replenish it from ye olde pirates' oxygen tanks that are scattered around. Pick up a lantern to light the darkened rooms. Collect the treasure and try and figure out what all the other junk does. And so on. I reckon you'll need a joystick and probably a colour set as well ... it's just too hard in B&W or from the keyboard. Being able to carry only one object at once is the real clincher though ... the game is hectic to say the least but not so hard it's impossible. At £1.99, it could just be another jewel in your crown!

Graphics: 8 Playability: 8 Value for Money: 8 Addictiveness: 8

Domark/£8.95

Gwyn A blood curdling scream rings from your Spectrum — then... silence! Not even the drip, drip, drip of blood. Just a message saying that owing to memory restrictions sound and music are missing from this version.

Still, that leaves the terrifying silence as you play with only the hum of the power supply, the wind rustling the trees, whistling through the empty house... the creak as you slide from your chair, not stiff as a board but bored stiff. Yes, undoubtedly Domark has created a computer nasty — though not in the sense it undoubtedly intended.

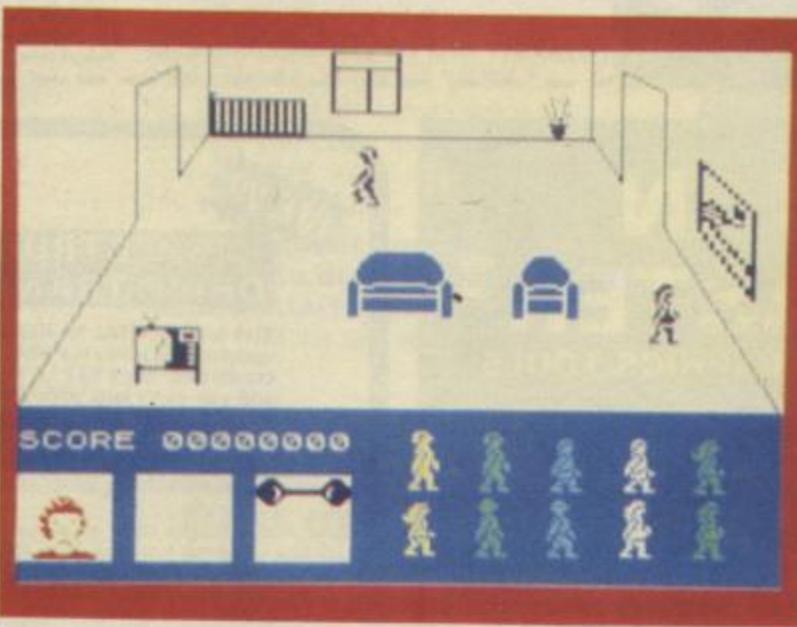

Anybody who has ever seen a Friday the 13th film will know the plot — mass slaughter with a variety of novel weapons. So do Domark allow you to play Jason and massacre the all-American brats in the summer camp? They do not! They expect you to save this bunch of butch bozos and highly strung wimps. This you do by running round the camp site and moving over them. They will then make for the place of

sanctuary that you initially established with a cross — only Jason may come and scare them off so you'll need to round them up again. Ever felt like a sheep dog?

The reason this sort of movie never scared me was that I cared less than zilch about the victims. Well, if you thought the cardboard cut-out casts were bad, wait till you see their sprite equivalents. Am I really supposed to sympathise with a badly drawn silhouette in a landscape that looks worthy of Sinclair Basic's finest?

At heart there was the idea for a decent strategy-adventure here — Argus did it with *Alien*. Instead Domark's managed to create yet another program to match the ineptitude of *A View To A Kill*. You get the chance to use a chainsaw, knife or other weapon on Jason who is disguised as a friend — but by then the only thing you'll want to kill is the program cluttering up your ROM!

Graphics: 3 Playability: 3 Value for Money: 3 Addictiveness: 3

FRIDAY THE 13TH

course (usually within a set number of faults) if you wish to move on to the next course. The game is keyboard definable but it works best on the joystick. Speed (walk to walloping gallop) varies enormously and with the possible control of your horse through 360 degrees your tactics will vary between the Schockomole school of slow and steady and the Harvey Smith hell for leather theory.

The course doesn't scroll but unfolds over several screens. The facility to 'walk the course' as in the real McCoy is a distinct advantage. The only unrealistic facet is that you can go behind jumps — normally

faulted — but your average gamer would probably never complete without it.

Having done the hard part well — horse and jump simulation — Alligata falls at the final fence by failing to recognise the thrills of the original sport. The crowd graphics are tinny, no one falls off and the paraphernalia of the ring are missing — why aren't real horse, rider or tournament names used? Three faults for this refusal but a clear round for a game as sweet as a (pony) nut.

NEW

SPECTRUM TAPE AND DRIVE TRANSFER UTILITIES

TU8 is ESSENTIAL for ALL Spectrum owners — our recently updated tape utility is a REAL MUST for tape back-up and drive conversion. Send SAE for FULL DETAILS. You will be amazed and you can't lose with our money back guarantee.

- ★ New simple option to deal 100% ACCURATELY with MOST very long programs (over 47k).
- ★ Includes BAUD RATE (speed) and tone measurer for fat loaders — can save at normal speed for possible drive transfer.
- ★ Manages nearly all clicky leaders — can convert totally to normal for tape load OR converts with all information required for EASY drive transfer with our Transfer pack.
- ★ So many extra features we can't possibly list them here. Just try it and see. As the market leader we can't afford to let you down.

COST only £6.99 on tape OR £7.99 on m/drive cart.

TRANSFER PACK 2 — FOR TAPE TO DRIVE TRANSFER

A sophisticated package of programs INCLUDING TU8, other utilities, allows drive transfer of many programs.

- ★ Includes header reader, bytes chopper, bytes mover.
- ★ Extra utilities (REM kill, VAL creator, a RUN program for m/drive owners).
- ★ Five information sheets giving details on drive transfer of 40 popular programs.
- ★ Manages virtually all clicky leaders to drive.
- ★ FULL manual, technical information, etc., etc. Have fun transferring and learning at the same time.

State name of your drive system (e.g. m/drive, Waf, Opus, etc.). ONLY £11.99 on tape OR £12.99 on m/drive cart.

UPDATE SERVICE: Send OLD program + LARGE SAE to claim the following REDUCTIONS: Old TC to TC8 £2. Old TP1 to TP2 £6.50.

OVERSEAS: add £1 Europe, £2 others for each product. SAE for enquiries.

ALL OUR PROGRAMS CARRY A MONEY BACK GUARANTEE (not updates).

W A F A D R I V E

YS SPECIAL OFFER

This month YS has come up with a real cracker of a money off offer — a Rotronics Wafadrive for under fifty quid. At that price it's a real steal. But if you still need some convincing, you'll find all the facts below. We went to Rotronics and asked all the obvious questions that a prospective buyer would put. Can you afford not to find out more...

What does a Wafadrive offer me that I can't get from my cassette?

Speed's the obvious answer — it takes just 40 seconds to load *Spectral Writer*, the free wordprocessor that comes with your Wafadrive from a 16K wafer. But the really big advantage is that you can store programs as files on a wafer. It's a real chore finding where you've put a particular program on a cassette, especially if you've got loads and loads of them on there.

So just how fast is a Wafadrive?

Well, it all depends. It depends on the position of the tape in the wafer and it depends on the size of the wafer. But as an average, *Sherlock* on a 64K wafer takes 43 seconds to load. You can usually reckon on about 2K of bytes going in every second plus the access time.

So it's not as fast as a microdrive?

That depends as well. You're right, it's not as fast at loading in the data. But, if you take into account the Wafadrive's more friendly operating system and its easier command syntax, you'll probably find it takes you no longer to load in a program. All that "m";1; stuff goes straight out the window. It's just LOAD * "filename" and you're away.

Yes, but what about reliability? The reason I've been put off microdrives are all the stories about how unreliable the cartridges are.

Microdrive cartridges do have a finite life but there's no way you're going to wear out a wafer cartridge. There's more tape in a wafer than in a microdrive cartridge so it's under less stress. And the protective cover that slides across when the tape's not in use stops people putting their grubby fingers all over your tape.

What other advantages are there over microdrives?

Other than performance, you mean? Well now there's price. £49.95's what you'd pay for a microdrive without the Interface 1 — the Wafadrive plugs directly into the back of your Speccy, of course. And remember, you get two drives on a Wafadrive just like on a professional system.

Why are there three different

sizes of wafer cartridge?

That's so you can choose the most appropriate size for the job you want it to do. The larger the memory, the more tape in the cartridge and the longer it'll take to access the files. So, there's no point in choosing a 128K wafer to store programs that you're loading frequently. Much better to develop your programs on a small wafer and then transfer them onto a 64K one that has plenty of storage and medium access times. The 128K wafer is really only useful for archiving because of the longer access times. But when you do want an old program, you can quickly find it by CATing the wafer — try that with all your old cassettes.

Is the capacity of the wafers exactly 16, 64 and 128?

No, that's just for convenience. On average you could expect to get about 75K on a 64K wafer and anywhere up to 140 odd K on a 128.

Can I connect any full size printer via the Centronics and RS232 interfaces?

Yes — with the one exception of the MCP 40.

I'm used to word-processing

with *Tasword II* and I'd like to continue with it — is it possible to transfer it to Wafadrive?

Yes. You can get an information sheet that shows you how to do it direct from Rotronics. For anyone who hasn't used a word-processor, *Spectral Writer* will fulfil all your requirements.

Is it easy to transfer programs from cassette onto wafers?

If the programs are in Basic, you've got no problems. Just load them in, then save them onto the Wafadrive. Machine code programs can present more of a problem, especially if they're very large and don't leave around 2K for the Wafadrive Operating System. You'll find the transfer utility on the Rotronics Toolkit wafer very useful. It also includes routines that let you COPY to Epson printers, print graphics from Basic, a printer channel driver, a de-initialise routine and a file utility.

All this can be yours for just £49.95. The Wafadrive is a smart black box that sits neatly behind your Speccy. With its twin drives and free word processor you're now the proud owner of a really professional system.

WAFA OFFER

At this price, how can I fail to take advantage of your offer. Please send me:

...Rotronics Wafadrives including *Spectral Writer* and one free 64K wafer at £49.95 each, including postage and packaging. (Overseas £51.20 including p and p).

...16K wafer(s) at £2.49 each.

...64K wafer(s) at £2.79 each.

...128K wafer(s) at £2.99 each.

...Toolkit wafer(s) at £9.95 each.

TASK FORCE

Are you finding programming a real task? Then may the force of Ian Hoare be with you!

Get your blank tapes and cartridges at the ready 'cos we've absolutely zillions of really useful routines for you this month. **Ian Thompson** from Ripon sent in a helping hand for all those people just aching for an absolute draw facility. Whassat I hear you cry? Well, if you want to draw a line on the Speccy you have to specify how many pixels it's to go up and across the screen. Absolute draw enables you to choose where the line is to end in screen pixel co-ordinates. If you enter 999 for the x co-ordinate in Ian's program you'll exit it, you can alter this if you wish though.

```
10 INPUT "x: ";x$; y: ";y
20 IF x=999 THEN STOP
30 DRAW x- PEEK 23677,y-P
EEK 23678
40 GOTO 10
```

Ian also provided an interesting snippet that'll fascinate those who like seeing pretty patterns on the screen.

PLOT 127,87: DRAW 10,10 n Where n should be a fairly large number. Why not try these values for n: 1871, 6669, 3343, 991, 2512, 6974, 778, 8440. Ian also suggests you set OVER to both 1 and 0 to see what happens.

Pete Craig from Chesterfield has answered my call for a machine code routine to do graphics dumps that'll work with the Interface 1 RS232 port. The way it's written, it'll work with all compatible printers. If your HR5 doesn't do line feeds in

graphics mode of n/72" from ESC;"A";n, then you can alter both the code, and the number of linefeeds, by changing the DATA near the beginning of the source code. The fourth byte in the line labelled "DATA" counts the number of line feeds sent.

I've found that some HR5 printers send a 1/36" while others send a 1/18" line feed, so you'll have to experiment if you don't get the perfect image first time. Don't worry, you won't do any harm so long as you keep the same number of DATA bytes. Once you've got the routine working as you want it, you'll be able to use it at any memory location, provided it's called from Basic. And it's relocatable so long as the BC register pair contains the address of the start of the routine — but that's usual when it's called from Basic.

```

To use this routine with your Interface 1, just do the usual FORMAT "b"; baudrate: OPEN# 3; "b" to set up the RS232. It's now ready to send data to the printer. Whenever you want to do a screen dump, RANDOMIZE USR address will work just fine. Oh and don't forget to close the channel afterwards.

One last thing, one of my Micronet friends **Colin Maclarens** has discovered that this routine prints the top pixel line at the bottom of each line, though it works fine for me. If you do experience this, his solution is to put in RRC E at line 565.

Now, do you remember in issue 2, I asked if anyone had found a use for VAL\$? Well, Stone me if **Jim Greenwood** hasn't come up with one. Let me quote from his letter. "I was writing a program for recording details of software that involved holding several arrays. These contained such data as title, author, publisher and each of them was a different size with elements of a different length. Now I found that when I was extracting an entry to modify it I ended up with several commands like IF n=? THEN LET w\$="?\$(?)". But the subsequent coding for operating on the workspace w\$ was the same.

But if I set up an extra array containing only the identifying letters of the actual data arrays, I could then use a VAL\$ function to extract a line from any one of the arrays with a single command. Have a look at this listing. It's pretty trivial but it'll give you an idea of how it works.

```
5 DEF FN a$(a$,a)=a$(a)
10 LET z$="abcde"
20 LET a$="ABCDE": LET b$="FGHIJ": LET c$="KLMNO": LET d$="PQRST": LET e$="UVWXYZ"
70 FOR a=1 TO 5: FOR b=1 TO 5: PRINT FN a$(VAL$(z$(a)+"$),b): NEXT b: PRINT : NEXT a
80 STOP
```

"There are two restrictions though. Firstly, you can only use this technique as a parameter in a function call — try to use it as a direct

command, and you'll get a 'Nonsense in Basic' error message. Secondly it can only be used one way — you can't use it to put data back into one of the arrays, because an FN statement can only appear on the right hand side of an equation."

Ah, but what about DEF FN a(b)=b— 256* FN c(b)?

Jim has also sent in a solution to my puzzle about the bug in **Peter Craik's** scroll routine from issue 2. In fact, he pointed out two bugs, though I must admit, one of them was a slip-up on my part — in line 30, the second '=' should be a '-' sign! His solution to the problem is to change just two lines, 110 and 130 as follows:

```
110 FOR b=8 TO 1 STEP -1
130 PRINT AT a+1, 0;c$;AT a,0;b$
```

But he also goes on, "At the risk of being a spoil-sport, I've got a quicker way of doing it that uses string slicing. I use it in a word processing program I wrote.

```
200 DIM a$(32*44): LET a$(673 TO 704)="The fastest BASIC scroll around!"
210 FOR a=1 TO 705 STEP 32
: PRINT AT 0,0;a$(a TO a+7
03): NEXT a
230 STOP
```

"Quicker? — 'that's not any quicker!', you cry! But the above routine is scrolling 704 bytes not 32, so it's 22 times faster! Plus it has one advantage that's essential in a word processor — it's not messing around with CHAR\$ (system variable) so the text remains readable all the time. And the technique can be used for scrolling backwards or forwards, simply by changing the value of the pointers."

What can I say to that lot? Except, thanks Jim. I'm looking forward to hearing a lot more from you in the future. But that's all we've got room for this time. See you next month.

EVERY ONE A WINNER!

All letters win a YS badge

If you've got a program that's a little more than just a routine, send it to Ian Hoare, Task Force, Your Sinclair, 14 Rathbone Place, London W1P 1DE.

METHODS

If you've slipped through the Micronet, now's the time to find out what you've been missing. Rachael Smith is a recent recruit who's been caught hook, line and sinker by the system.

Hey — you! Yes — you — the lonely little Spectrum lurking in the corner. Spending all your life alone, with only a games cassette to keep you company? Didn't you know that you could be talking to other Spectrums, flying space missions . . . even getting a job?

Micronet's the name — a lonely hearts club for Species (and their owners) all over the country. It started as a cordoned off corner of Prestel, the mainly-for-businesses service run by Telecom — as a web of communicating computers forming a club courtesy of the telephone lines, with its members tapping in messages late into the night. In January of this year it boasted nine million frame accesses and it's become a major part of the system, with foreign countries using it as the basis for their networks.

Okay — so I'm interested . . . but I'm still not sure what it is, so: **A) How do I get involved? B) Will I need a degree in electronic communications? C) A PhD? D) Does it hurt?** The answers to questions B, C and D are No, Nein and Nej. For A — read on . . .

Dear Rachael . . .

Can you tell me how to 'log-on', as I believe the 'hip types' call it?

Dear Dave — You don't want to remain the silent-but-puny type forever. Well, you can't just go plugging your Spectrum into the telephone lines, you know. First you'll need a **modem** (another expression to casually drop into conversations if you want to look **trendy**) which shoves your computer communications down the phone line. Luckily the price of these little black boxes (or **thingies**, as we call them in the trade) has plummetted recently so they needn't cost an arm and a leg.

Then you're going to need one of those ever-so-up-to-the-minute phone sockets to plug into, because honestly, Dave (I can call you Dave, can't I, lovey) the old acoustically coupled types just didn't cut it. Then you plug the computer into the modem, the phone into the modem and the modem into the phone socket and . . . simple, wasn't it?

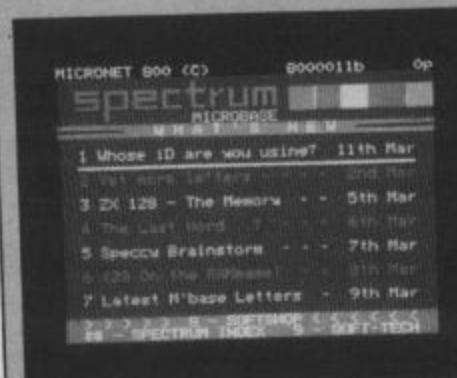

But you're not there yet. You still need to open your wallet and say (after me) 'Take your subscription'. Go on — you can do it — and it won't hurt too much. In fact it's only £16.50 per quarter, which is only £1.26.92307 a week or just over 18p a day — the cost of a Mars bar, and Micronet doesn't rot your teeth. Dial strategically after 6pm or at weekends when it's local cheap rate and avoid the Prestel charges of 6p a minute so that being 'on the net' need cost no more than 50p an hour — which is pretty cheap compared with that other little 'hobby' of yours, isn't it, sicko?!

And for that you get access to Prestel and its related services, plus the other main network — Compunet — and a host of smaller scale bulletin boards.

Follow my advice, dearie, and you'll truly be à la mode-m.

• Let us Spray . . .

Graffiti is more like those ongoing conversations you find on toilet walls — only not quite as obscene and without the phone numbers promising a good time! Instead there are running jokes and a friendly swapping of insults between members.

MICRONET Specboard

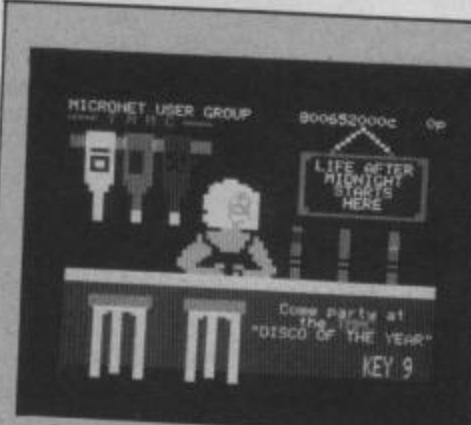

The Exclusively Clive Club

No computer club would be complete without its special members section. So, it comes as no surprise that Micronet caters for its Spectrum subscribers in a big way. The Spectrum Microbase is filled with news, views, reviews for the machine, plus a help-line for anybody who's having machine specific problems. One of the great advantages of electronic publishing is its speed, so new Spectrum developments can be on screen in a matter of hours.

• Here's another example of Micronet's nested pages. Following the dedicated Spectrum trail could lead you to the *Gallery* and a specialist magazine there. And if you're looking for a particular peripheral or program there are even *Spectrum Swap Shops*.

• Exchange and Mart

Ever spent a happy five minutes browsing through the cards in a newsagent's window? You'll be able to spend rather longer looking at Micronet's small ads and won't get cold feet into the bargain. Anything from micro specific items to general goods could turn up in the *Swap Shop* — and if it's people and not possessions you're looking for there's even a *Contacts* sections. My ad's the one for tall, dark handsome millionaire with own yacht — because I'm looking for both!

MICRONET Midnight Micronetters Club

Thriller

It's after midnight . . . Okay, it doesn't have to be beyond the witching hour to use this club within the club, but the activity is at its most brisk later in the day.

The real high spot of the **MMC** has to be its very own **Agony Aunt**. She invites you to lay your problem on the line and then proceeds to soothe it in front of an audience of voyeuristic computer buffs. **Pseudonyms** aren't just an option — anonymity would have to be complete to get me on here. One or two of the troubled seem to have their tongues firmly in their cheeks (maybe that's their problem) but others are just the sort of things a trained Katie Boyle could lance.

• The general friendly, silly chattiness of the MMC — where members have their own mailboxes — reminded me rather of late night local radio programmes.

• You said How Much?

If you're afraid that those all night attempts at the *Round Britain Race* may be breaking your bank, you can consult your current bill on page 92. Be warned though — that'll only be the bill for the computer that you're connected to.

Other services from the business end of running Micronet include a Letters to the Editor slot, Security and Password changing and, of course, Help desks, should something go terribly wrong.

• Get Ed-ew-kat-ied

Those of a more serious disposition will be well pleased with Micronet's educational opportunities. There are sections to learn the basics of Basic, or other languages for that matter, or maybe you'd prefer to be naturally intelligent about the artificial variety — there's a specialist section for you too, full of news and information on the ever developing world of A.I. And while Micronet would be the first to admit that you'll never learn everything from screens of text, it provides for this with comprehensive book lists. So the old technology wins out in the end!

MICRONET Logging On Box

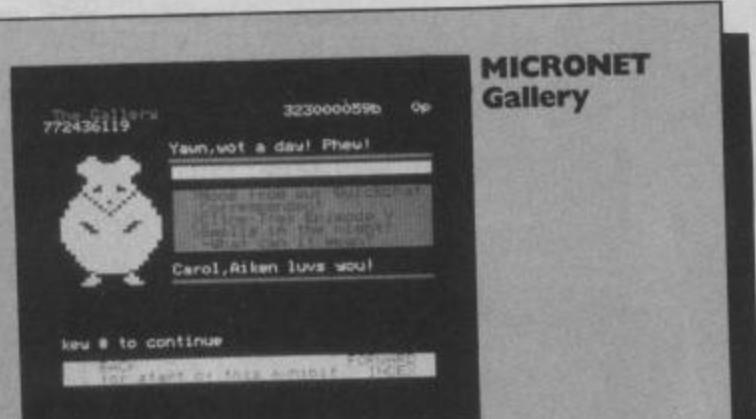

Welcome to the friendly world of computers!

Getting onto Micronet is easy — providing you're supposed to be there.

The way in is via Prestel, and to reach that you'll need your personal Identity Number and Password. Prompted by the modem simply type in your i.d. then the password, which you're advised to change on a regular basis. You'll also have to dial the local computer, of course — a three digit number.

You're into Prestel now, and if it's your first time you'll find a message already waiting in your personal mailbox, just to make you feel welcome. But probably you'll be in a hurry to look at the wonders of Micronet. 800 is the number to remember. That's the front page, and providing you're a fully paid up member of the club who's not been breaking the rules you'll be able to walk right in.

At first the best way to find your way is just to walk around. Single numerical key strokes take you forward by different routes, or Enter — shown as # — simply moves onto the next page.

MICRONET Gallery

The New Technology

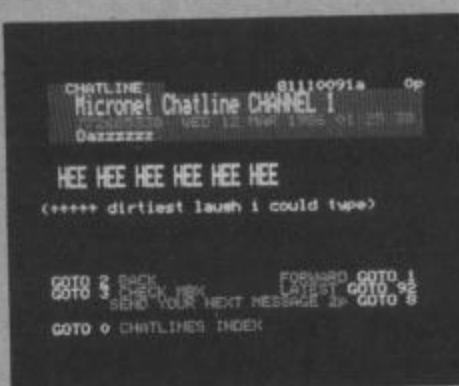

Now this is it — the section for all of you budding Rupert Murdochs and Eddie Shaws out there.

First thing is to get on the waiting list for gallery pages. You'll have to pay a small sum for them, but once your turn comes round they're yours for the duration. A quick rifle through the pages of these electronic magazines revealed ones dedicated to everything from computer games to pirate radio. Reading costs nothing, and once you've accessed a title from the index you can leaf backwards and forwards through the pages at will.

• Give some thought to how you use your pages — after all, the opportunity to reach so many people with your ideas is previously unparalleled.

• Sprouts from your Spectrum

Pundits tell us that in the future we'll do all our shopping from in front of the TV, ordering via the telephone lines. In a limited fashion it's already available from Micronet — in fact you may already be able to buy your weekly groceries if you live in some areas of the country (but quite how do you check those avocados are ripe with a micro?).

MICRONET Chatlines

Can You Hear Me?

Idling away an hour or two in conversation is an important part of any club — and Micronet's no exception. There are two different types of Chatline. On the Daisy Chatline messages are held in a daisy chain arrangement, so that previous contributions to on-going debates can still be accessed by leafing backwards. The Quickchat lines have the slogan 'Blink and you'll miss it' and at peak hours you won't be able to dawdle over the long words.

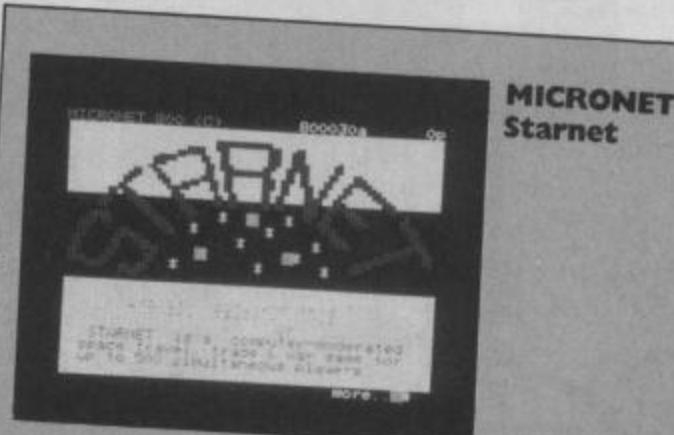

At first it's probably wise to sit back and watch what happens. The Chatlines include specialist areas as well as general ones. There's Music, or Adventure hints and tips and even a highly used Gayline.

Once you feel ready to join the great debate just tap the number option for sending a message then type it in with the standard keyboard. Don't worry — you'll be given the opportunity not to send it before you press Enter and consign it to the public gaze.

• Members often use nicknames on the Chatlines, but Mailbox numbers are shown if you want to continue a more discrete tête à tête. This is known as MBX-ing — yes, Micronet too has its own body of slang.

• Soft Shopping

One advantage of belonging to Micronet is the chance to download free software. That's right — I said free! — and while the programs aren't likely to set your micro on fire there are some useful and varied things over the year. You can also make respectable savings on commercial programs, including chart toppers, if you download then save to tape.

MICRONET Starnet

Captain's Log . . .

Like *Elite* ever wished it was bigger? With actual opponents to play against? Then sign up with the Starnet, Captain.

Starnet is a game of space trading and conquest. It's a computerised version of that age old idea, the play by mail game. Of course it costs a bit to register and take your turns as you zoom around trying to become big cheese in the galaxy. There are Starnet Chatlines and magazines in the Gallery pages, and you can always Mailbox other star captains to plan secret alliances and trading links. As with the rest of Micronet, playing is incredibly friendly, so you only expend thought on your strategies.

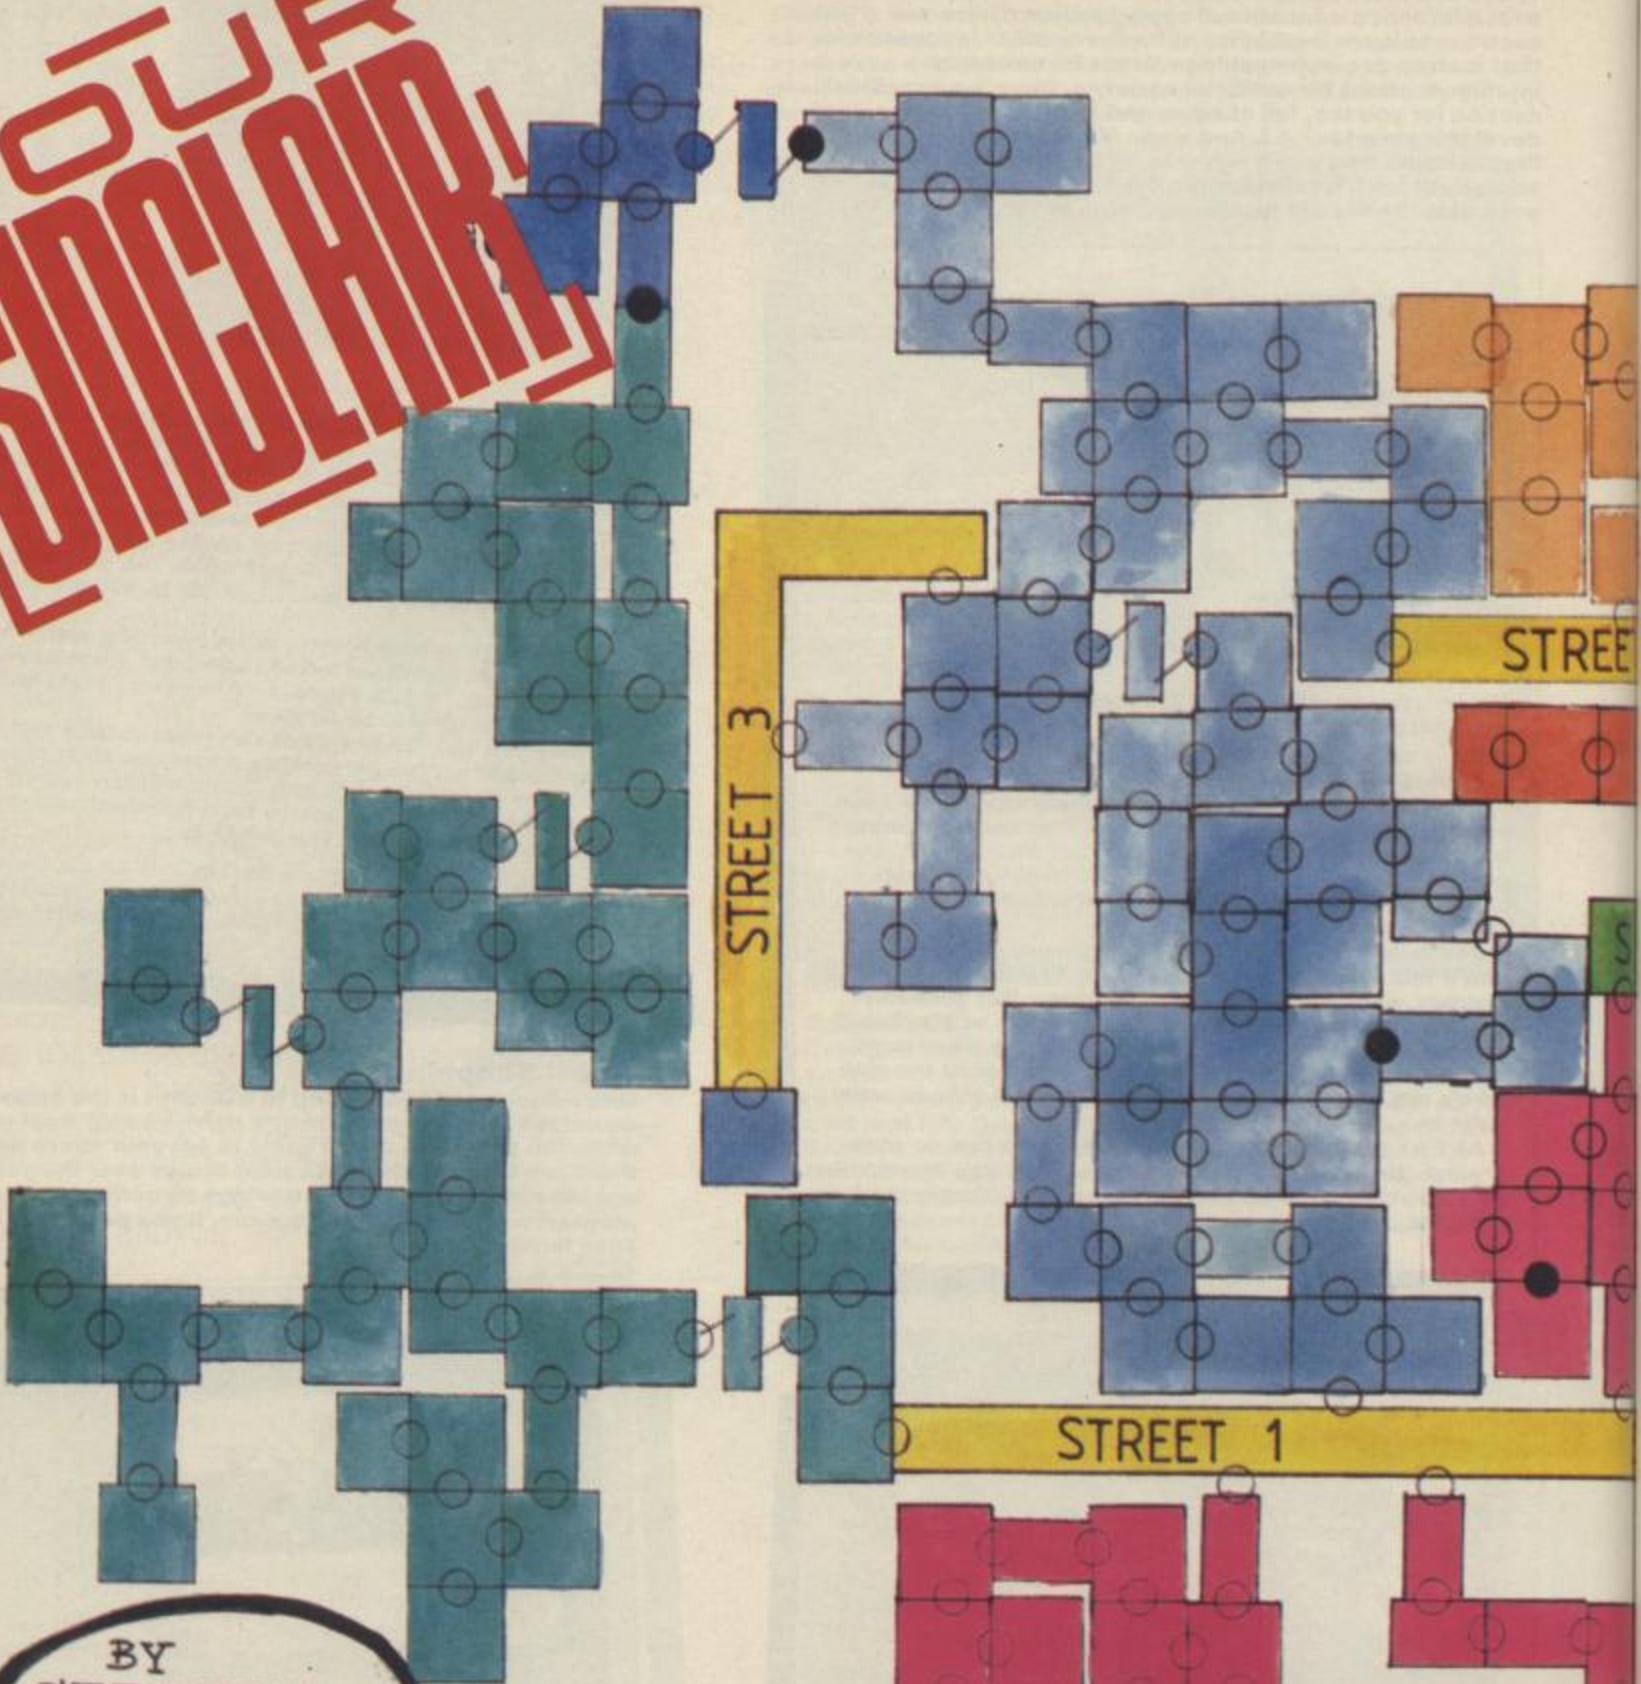

• Starnet isn't only Micronet game. There are also competitions like the Round Britain Race — a treasure hunt in which you never need to leave your armchair. A series of clues let you move your cursor round a map of Britain, and there's a cash prize at the end of it all.

• Find Yourself a Job

A new-ish service on Micronet is its Job-Search, which is attracting a good number of advertisements — even if they are primarily for work with computers. If you fancy going it alone, instead, there's Bizznet, which provides an information and advice service for small businesses, with experts on line to offer advice.

```

by David Green

Short Circuit is an amazing Tron
grid-style program but it's the
meanest and toughest of them
all. You've only a small window
to look through so you really
have to guess what your
opponent is up to. The program
is a little tricky to enter so follow
the instructions carefully.

Mooniron is a basic platform style game that'll have you at your keyboard for hours. Some evil rogue has stolen the crystal of **Mooniron** and good ol' RoBoD has been ordered to get it back from the Starship where it is being kept. But first he's got to travel through a five room complex collecting three light packages that must be taken to the light lock. He'll have to be nimble 'cos there's also a horde of nasties waiting to send him to his peril. **Mooniron** comes complete with full joystick compatibility and bonus lives.

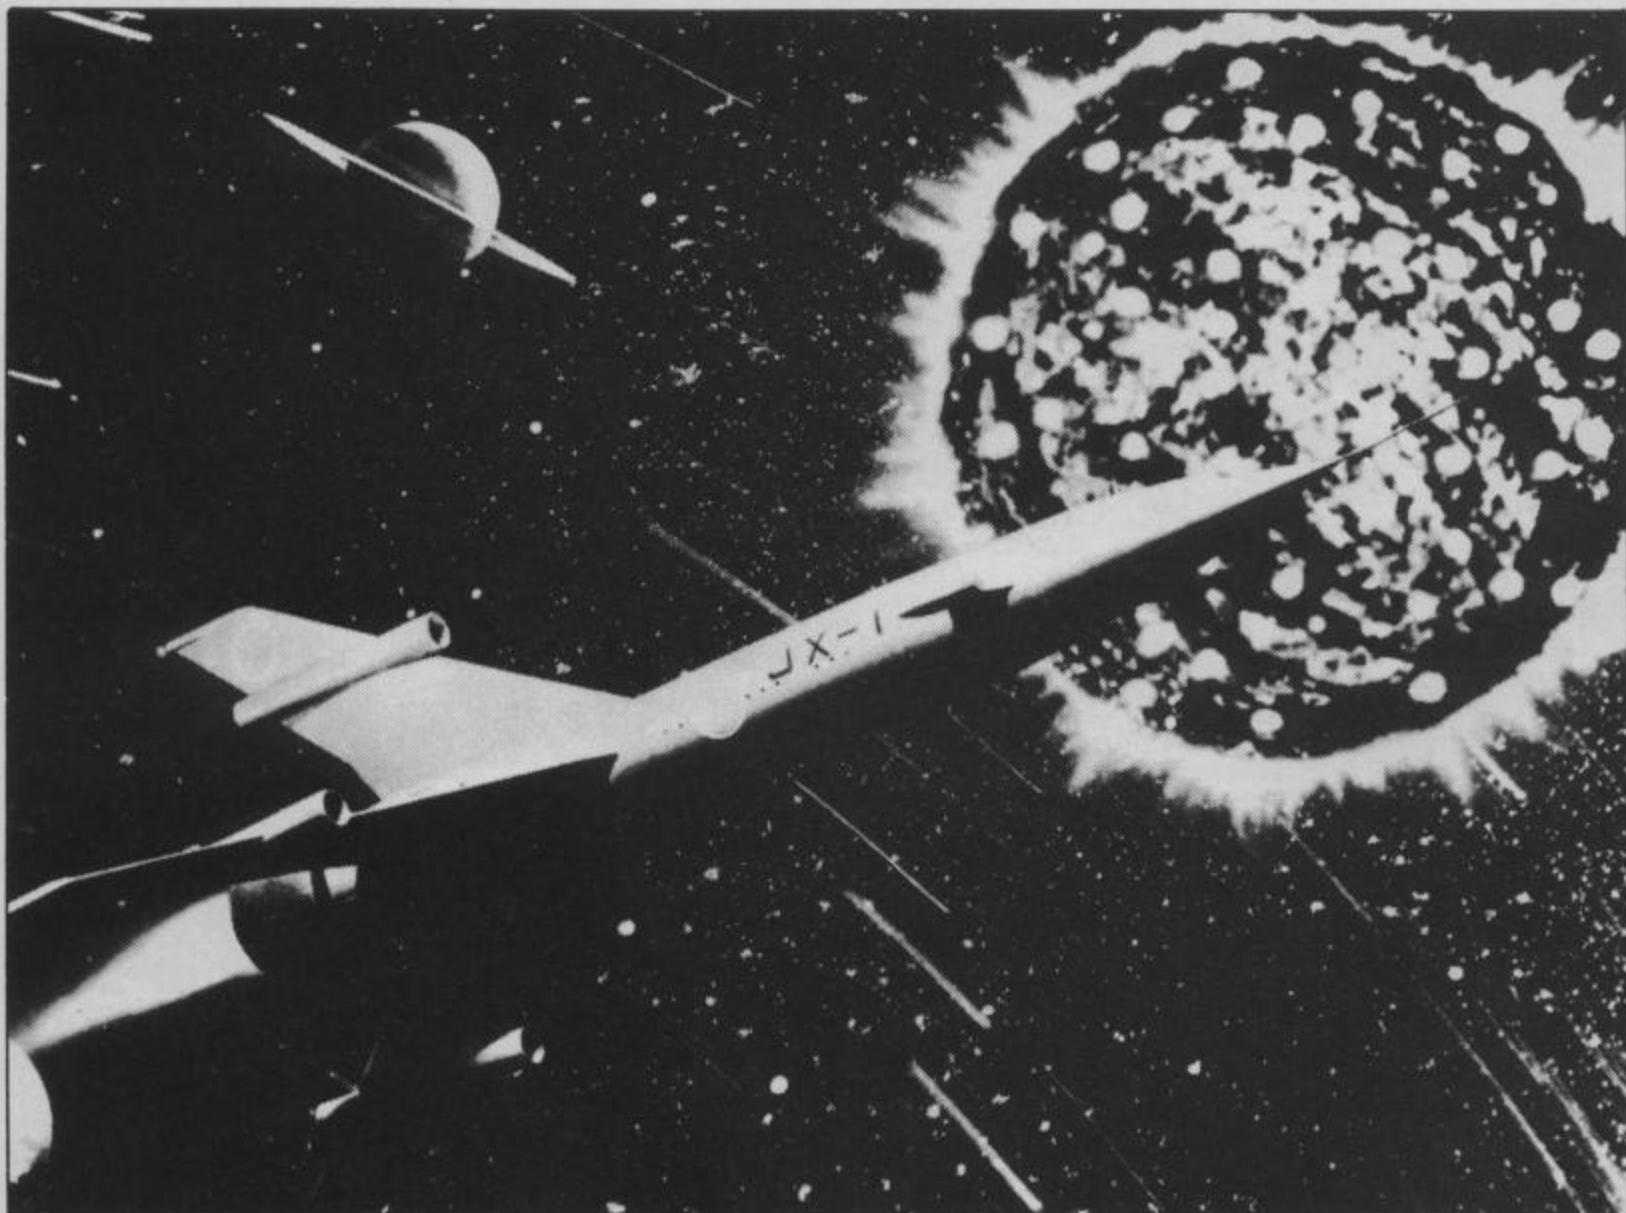

The user defined graphics key will help you when entering the graphics symbols in **Mooniron**.

PROGRAM POWER

Have you written a huge, amazing, truly wonderful program? Or even a not-so-huge, amazing etc etc program? Have you driven your friends, your Mum and Dad, brothers, sisters, dogs, cats and gerbils mad persuading them to play it? Well, how does this idea grab you? Send your program to Your Sinclair, and if it's printed, huge numbers of strangers can play it instead! Added to that, you'll get lots of lovely lolly for your efforts.

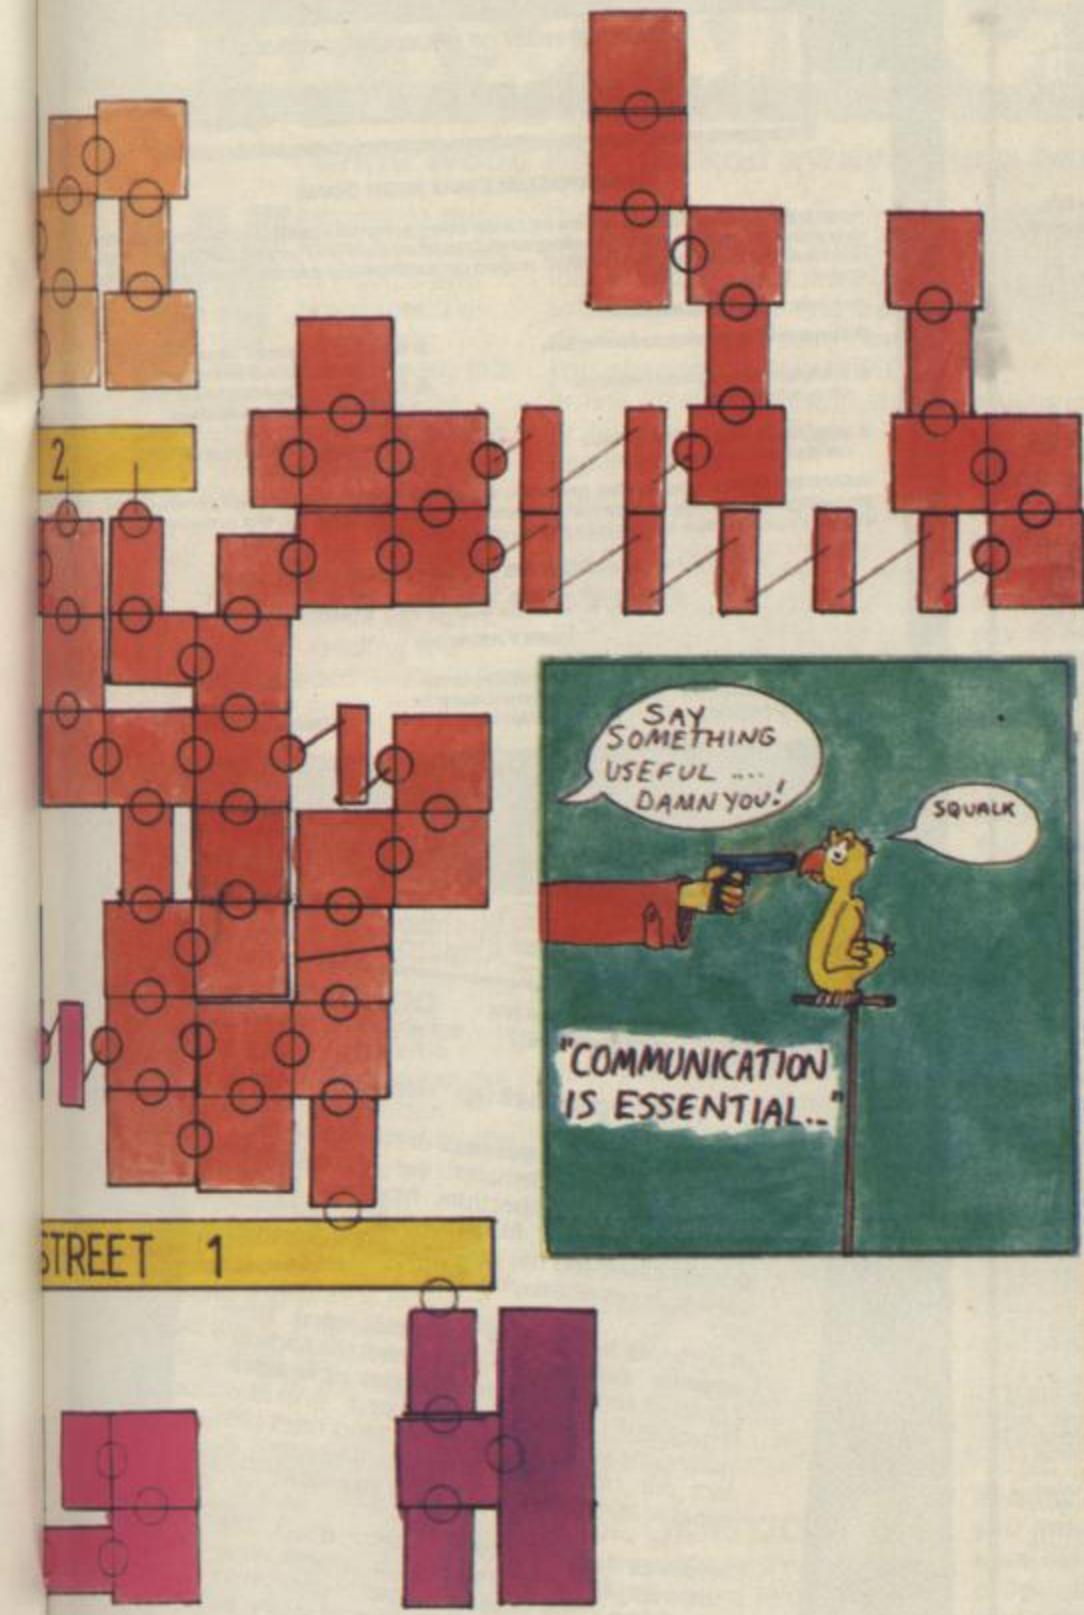

Fill in the form below and send it with your megaprogram on cassette to Gavin Monk, Your Sinclair, 14 Rathbone Place, London W1P 1DE.

Name _____

Address _____

Telephone Number: _____

my megaprogram stalled... and little comment is original... and I don't tell parties

LOVE

YS COMPO WINNERS

Barry's Boxing Compo

Boxing clever with the correct answer of 12 differences were the following eagle-eyed people:

David Fennedy of Eltham, London; Peter Balloch of Stepney Green, London; Matthew Jones of Bromyard, Herefordshire; Dwayne Morgan of Monmouth, Gwent; Paul Pummell of Brentwood, Essex; Nicholas Turpin of Middleton, Leeds; Simon Southern of South Shore, Blackpool; Martin Alexis of North Woolwich, London; Mark Jones of Prestwich, Manchester; Stephen Impey of Impington, Cambridge; Steven Kearns of Irthingborough, Northants; Thomas Carter of Leigh, Lancs; Timothy Crampin of Barrow on Humber, South Humberside; Gary Burwood of Scunthorpe, South Humberside; Christopher Hildrey of Lechmerehead, Northshire; Michael Burns of Benwell, Newcastle upon Tyne; Jonathan Kendall of Totnes, Devon; Chris Jackson of Whitwell, Notts; A.M. Garvie of Joppa, Edinburgh; Brian Scurr of Wolverton, Milton Keynes; Stephen Waller of Crawley, Sussex; Adrian Slowey of Mill Hill, London; John Mundy of Arborfield Cross, Reading; J. Hayward of Chippenham, Wiltshire; Gordon Buchanan of Airdrie, Scotland; Anton Mangion of Zejtun, Malta; Barry Mead of Nailsea, Bristol; Andrew Mackintosh of Farnley, Leeds; Roy Fowler of Sheffield, S. Yorkshire; Alexandre Vicente of Portugal.

Fly Me Compo

Scooping up the supersonic prizes in our Fly Me Compo, with the correct answers of 'Air France' and 331.46 metres/second, are:

First prizes: E. Jackson of Hull, Yorkshire and Martin Atkins of Crumpsall, Manchester.

Second Prize: Theo Smeissen of Eindhoven, The Netherlands.

Runners up: Drew Swan of Lochgilphead, Argyll; David Smethurst of Greater Manchester; Duncan Galbraith of Wotton-u-Edge; Gloc, Ulf Norholm of Malmö, Sweden and Kirstian Nielsen of Otterup, Denmark.

Rambo Compo

No man, no law, no war could stop the winners of our Rambo Compo! Ten winners get a sweatshirt each, and 50 runners up get copies of the Rambo game.

Winners: Harneet Mangat of Heston, Middlesex; Phil Rainford of Mossley Hill, Liverpool; David Hill of Harpenden, Hertfordshire; James Watling of Morley, Leeds; J.K. Weston of Ottery St Mary, Devon; Benedict Symons of Swansea, Wales; Andrew Eccleston of Bentilee, Stoke on Trent; David Bates of Solihull, W. Midlands; Richard Lambert of Summerbridge, Harrogate; C. Ward of Rothwell, Northants. Runners up: Anthony Challis of Peterborough, Cambridgeshire; A. Moss of Ipswich, Suffolk; Simon Geere of Waterlooville, Hampshire; Susan Jones of Glynfach, Rhondda; Daniel Coenens of Gent, Belgium; Richard Gammie of Great Glen, Leicester; Brian McCorkell of Forres, Moray; Paul Smith of Lynton, N. Devon; Nigel Stephens of Creswell, Notts; B. Duffin of Bebington, Wirral; Christopher Stockham of Stratford upon Avon, Staffs; Brendan Whalley of Stoke on Trent, Staffs; Ron Sleatholm of Pontefract, Yorks; John Styles of Romford, Essex; Joseph Kasa of Basingstoke, Hampshire; Brian Barr of Prestwick, Scotland; Anthony Bennett of Lowerwick, Worcester; Colin McBurnie of Dewsbury, W. Yorkshire; Stephen Jones of Johnstone, Chwyd; David Lane of Abbots Langley, Watford; G. Taylor of Cuddington, Northwich; Mark Ward of Warsash, Southampton; Philip Henry of Prestwich, Manchester; Jonathan Barnes of Willerby, Hull; Neil Baines of Salford, Manchester; Darren Fisher of Highbridge, Somerset; M. Starks of Weston super Mare, Avon; Ian O'Connor of Sutton Coldfield, W. Midlands; Mark James of Balsall, Midlothian; Sean Barrasso of Woodston, Peterborough; Graham Smith of Barnet, Herts; G. Williams of Cirencester, Glocs; David Wood of Bradford, W. Yorkshire; Anthony Lee of Wigston Magna, Leicester; Peter Hughes of Shepshed, Loughborough; Justin Winsted of Hounslow, Middlesex; Mark McNulty of Caprington, Kilmarnock; Simon Rose of Melton Mowbray, Leicestershire; Robert Bushell of Chessington, Surrey; Matthew Wilding of Canvey Island, Essex; Barry Williams of Halifax, W. Yorkshire; Billy Ormiston of Edinburgh, Scotland; William Tingle of Pickering, N. Yorkshire; Timothy Nightingale of Tettenhall, Wolverhampton; James Simpson of Bideford, Devon; A. Atkins of Warley, W. Midlands; David Cotterill of Warrington, Worcester.

Robot Messiah Compo

No-one made a Messiah of this compo! Robot Messiah posters are on their way to these 200 winners:

David Purkess of Lyndhurst, Hants; Shimon Young of Southend on Sea, Essex; Stephen Page of Ormskirk, E. Lancs; Richard Shearer of Stockton, Cleveland; Tariq Khan of Bradford, W. Yorkshire; Fernando Marques of Portugal; Duarte Carreira of Portugal; Stephen O'Mahony of Bandon, Co. Cork; Robin Butler of Canterbury, Kent; A. Hockey of Gurnard, Isle of Wight; Jonathan Leach of Sidmouth, Devon; Paul King of Norwich, Norfolk; Alan Naden of Matlock, Derbyshire; Matthew Pinner of Boston, Lincs; Craig Shields of Stoke on Trent, Staffs; Paul Fulcher of Thetford, Norfolk; A. Owen of Caernarfon, Gwynedd; Piers Glydon of Redland, Bristol; E.W. Fairweather of North Hykeham, Lincoln; Alastair McLeod of Dunfermline, Scotland; A. Grimstead of Wareham, Dorset; K. White of Weston super Mare, Avon; Chris Upstill of Yelverton, Devon; Neale Walder of Citheroe, Lancs; Timothy Grace of Calderstones, Liverpool; S.M. Woodley of Truro, Cornwall; C. Zowery of Torworth, Notts; Trevor Spencer of Middleton, Manchester; Freddie Bond of Carrickfergus, Co. Antrim; Adam Sparshott of Digswell, Herts; A. Broadfoot of the Sultanate of Oman; Stephen Collins of Farnborough, Hants; Damon Shaw of Hucknall, Notts; Pedro Figueiredo of Portugal; John Hegarty of Telford, Shropshire; Jason Way of Blandford, Dorset; Alec Rowbottom of Spalding, Lincs; Stephen Gallagher of Hazelhatch, Co. Kildare; J. Hinde of Withington, Manchester; T. Crampin of Barrow on Humber, S. Humberside; K. Ward of Clifton, Nottingham; Matthew Wilding of Canvey Island, Essex; P. Saunders of Burgess Hill, W. Sussex; Neil Stevenson of Clifton, Nottingham; Karl Butcher of Benfleet, Essex; A.W. Watson of Leeds, W. Yorkshire; John Dempsey of Bacup, Lancs; David Rosie of Wick, Caithness; David Robson of Wetherby, W. Yorkshire; L.G. White of Thamesmead, London; Jonathan Wingfield of Brickhill, Bedford; Merlin Cox of London; S. Brodie of Hull, Humberside; Ian Tribble of Abertillery, Gwent; U. Yasin of Leeds, W. Yorkshire; Alan Jones of Wolverhampton, W. Midlands; A. Ryan of Strood, Kent; Kari Walkden of Preston, Lancs; Stephen Lo of Coventry, W. Midlands; J. Langton of Pickering, N. Yorkshire; Terence Baker of Leeds, W. Yorkshire; Mark Eggeling of Stromness, Orkney; G. Burns of Amadale, W. Lothian; G. Hutchinson of Saffron Walden, Essex; Paul Harding of Bromley, Kent; Barry Hilton of Penge, E. Sussex; A.S. Thorne of Stockton-on-Tees, Co. Cleveland; Martin Wedebrand of Sweden; L/C Turner of Tidworth, Hants; Michael Mahole of North Shields, Tyne and Wear; Simon Wilson of Poole, Dorset; Ian Shuttleworth of Poulton le Fylde, Lancs; Benjamin Muir of Blackpool, Lancs; Neil Stevens of Tufley, Gloucester; Kenneth Phillips of West Denton, Newcastle upon Tyne; Richard Chaney of Hull, N. Humberside; David Brock of Arnold, Nottingham; Steve Mitchell of Basingstoke, Hants; Lynne Bettis of Linford, Essex; Jeremy Hewitt of Burry Port, Dyfed; Justin Hutchinson of Saffron Walden, Essex; A. Back of Bakewell, Derbyshire; Kevin Kendall of Ryton, Tyne and Wear; Adrian Bhagat of Peterborough, Cambs; Robert Burgess of Rotherham, S. Yorkshire; F. Dimmock of Bradford, Milton Keynes; Scott Blackwell of Wellingborough, Northants; David Oates of Queensbury, Bradford; Michael Cartwright of Barrhead, Renfrewshire; L. Spencer of Middleton, Manchester; Simon Smith of Isleworth, Middlesex; Craig Lowe of Huddersfield, Gloucester; Brian Fisher of Woolston, Warrington; Scott Robertson of Paisley, Strathclyde; B. Duffin of Bebington, Wirral; Andrew Browning of New Milton, Hants; Martin Thorson of Sweden; Philip Anderson of Harrogate, N. Yorkshire; Mark Davies of Haverfordwest, Dyfed; Mark James of Balsall, Midlothian; S.P. Kaliszczak of Lytham, Lancs; Salina Fabrizio of Northwood, Middlesex; S. Hammars of Sandown, Isle of Wight; Scott Sykes of Swindon, Wiltshire; Nuno Leitao of Portugal; Stephen Todd of Bangor, Co. Down; Nathan Tose of Millhouses, Sheffield; Sean Rows of Worthing, W. Sussex; Simon Kain of Prestatyn, Chwyd; David Kain of Colwyn Bay, Chwyd; Annette Prince of London; Calle Nordlund of Sweden; Edward Leigh of Pwllcrochan, N. Wales; David Willis of Alva, Clackmannanshire; Andrew Lea of Ormskirk, Lancashire; D. Sayers of Hounslow, Middlesex; Stephen Albow of Oulton Broad, Suffolk; M. Mitchell of Macduff, Banffshire; Paul Dobson of Wolsingham, Co. Durham; Ian Flory of Banff, Scotland; Richard Kiernan of Cockermouth, Cumbria; Paul Walker of Warley, W. Midlands; Martin Weaver of Middlesbrough, Cleveland; S.G. Wylie of Ramsgate, Kent; Steven Newey of Solihull, W. Midlands; Keith Mackie of Alloa, Clackmannanshire; Mark Hartshorn of Wigston, Leicester; Gary Walvin of Sutton in Ashfield, Notts; Madeline Evans of Cardiff; Lee Ayers of Hankelow, Cheshire; A.P. Empson of Southway, Plymouth; Richard Strong of Stratford upon Avon, Warwickshire; C. Stephanou of Colchester, Essex; Albert Kan of London; Carl Langford of Malton, N. Yorks; Leigh Thomson of Perth, Scotland; S.J. Lee of Huntingdon, Cambs; Tony Smith of Yeovil, Somerset; Michael Rosenbom of West Germany; Jack Sharp of Penrith, Cumbria; Peter Abberley of Winsford, Cheshire; T. Anderson of Naas, Co. Kildare; William Thompson of Walker, Newcastle upon Tyne; Samantha Proctor of Studley, Warks; Ian Luddington of Holt, Norfolk; Steven Winterburn of Shildon, Co. Durham; P.N. Holman of Harrogate, N. Yorks; Gordon Virgo of Royston, Herts; Iain Pickard of Louth, Lincs; Arthur Cole of Harston, Cambridge; Christopher Appleton of Glasgow; J. Fitzpatrick of New Duxton, Northampton; Christopher Hewson of Cheshire, Cheshire; Peter Green of Ormskirk, Lancs; Colin Ritchie of Edinburgh; E. Macaree of Maryhill, Glasgow; James Bate of Dawlish, Devon; D.M. Freeman of Raynes Park, London; Andrew Orr of Camberley, Surrey; Tony Wyer of West Huddersfield, W. Yorks; M. Chatterley of St. Clements, Jersey; Giles Hallam of Milnrow-u-Wychwood, Oxon; David Gregg of Brunton Park, Newcastle upon Tyne; David Tiffany of Malmesbury, Wilts; Tejram Dyal of Peckham, London; Paul Lear of Balfour, Glasgow; D. Holmes of Newcastle upon Tyne; Craig Wolfenden of Merthyr Tydfil, Mid Glamorgan; Stephen Longworth of Solihull, W. Midlands; Shane Mann of Youghal, Co. Cork; Richard Kinder of Lindsey, Huddersfield; Michael Allison of Bromley, Kent; C. Thomasson of Bexhill on Sea, E. Sussex; A. Moss of Ipswich, Suffolk; E. Chun of Galgate, Lancaster; Simon Richards of Wadebridge, Cornwall; D.H. Smith of Crawley, Sussex; Mark Harding of Taunton, Somerset; Royston Davidson of West Heath, Birmingham; Graham Mills of Northallerton, N. Yorks; Matthew Hurley of Newport, Gwent; M.A. Foreman of Margate, Kent; Andrew Hugman of Bilton, Hull; Scott Ashby of Gillingham, Kent; Sagi Shechter of Haifa, Israel; J. Vendenburgh of Cambridge; James Bulmer of Staines, Middlesex; Ben Harrop of Royston, Oldham; David Storey of Huyton, Merseyside; Gary Robert of Thetford, Norfolk; Derek Stevenson of Redding, Falkirk.

Evesham Micros

THE UTILITY SPECIALISTS

MAKE THE MOST OF YOUR MICRODRIVE WITH

INTERFACE III

THE IMPOSSIBLE HAS BEEN DONE

Yes it's true this fantastic new peripheral will transfer every program available on to microdrive. Yes every one. Yet, believe it or not, it is so easy to use that we are training our pet cat (Clive) to use it. Any drive.

Just look at these features . . .

- **Consists of hardware and software.**
- **Transfers all programs available on to microdrive.**
- **Very, very, easy to use. (If Clive can do it we're sure you can.)**
- **Makes a "snapshot" of any stage of a program. (Saved as a screen 1)**
- **Transfer can be activated at any stage allowing "customised" versions.**
- **All programs reLOAD and RUN once transferred.**

WARNING: Unlike competitive products, transferred programs run independently of the utility and occupy the correct amount of cartridge space for the program. (This means you can fit two large programs on one cartridge.)

IF YOU HAVE A MICRODRIVE YOU MUST HAVE INTERFACE III
ONLY £39.95 Inc. P&P

SIMPLY AMAZING

Trade and distributor
enquiries invited, U.K.
and overseas.

The software can be
supplied on cassette for
tape users.

This product is in a
class of its own.
Designed by DRAYSOFT.

DOUBLER

HAVING PROBLEMS BACKING UP THE
LATEST LOADING TECHNIQUES? DOUBLER
WILL SOLVE ALL YOUR PROBLEMS

THE tape backup "device".

After spectacular success on the CBM 64 and by public demand we introduced Doubler for the Spectrum. Now we have released Doubler Mk.II, which is professionally cased and has greater tolerance to the varying types of cassette decks in use.

It includes hardware and software. This superb "device" allows you to make backup copies of software with all types of loader regardless of length and speed. (Includes pulsing headers and different baud rates.) In fact our tests have proved "Doubler" is capable of copying with 100% success.

Requires access to two cassette decks. The software allows you to save a brand new machine copy onto one cassette deck while loading from the other. Fast and easy to use. They said it couldn't be done.

ONLY £14.95

PATENT APPLIED FOR

Customers who have the Mk.I Doubler may return it along with £4.95 for the new version.

All prices include P&P and VAT. Send cheque, Postal Order or Credit Card No. Credit Card order accepted by phone. Callers welcome. Wide range of goods stocked. Trade enquiries welcome. European orders send price as advertised. Outside Europe £2.00 for airmail. Mail order to Evesham Shop please.

HACKING AWAY

Chris Wood has hacked away — he's panned his ultimate POKEs!

Welcome to this month's bundle of POKEs and programs. I'm afraid I've some bad news for you, this is the last time I shall be presenting this column, sob, sob. Stop it, I'm getting drenched in all the tears. Anyway, now for the good news — ZZKJ our resident hacking computer'll be writing the column all by itself. So much for feeding it a copy of Tasword — I'm now redundant.

SIR FRED

If you're having trouble with this Spanish Mikro-Gen swashbuckler, then this program from that hard-working pair **A Brown** and his printer-lending friend **Chris Boland** will give you limitless energy. And if you're having problems trying to do a Tarzan on the ropes try this tip. When swinging, flip Sir Fred to the outside of the rope at the last moment of each upswing to gain maximum height. If possible, take a running jump at it to get a good start. This program is a little long so it includes a checksum to pick up any mistakes.

GUNFRIGHT

Here's a small but thorough program from **E Bennett** of Southend on Sea for

Gunfright. It'll give you infinite lives, surprise, surprise, lots of money and the ability to change the starting bandit. I'm not quite sure how you change the two POKEs in line 70 if you should want to but you can always experiment.

```
10 PAPER 0: INK 0: BORDER 0: CLS

In order to use this program you must first run it and save off the code that it produces. When you've done this MERGE in the first bit of Basic from the game and add another LOAD "" CODE in front of the RANDOMIZE statement. Then change the start address from 24800 to 23296 and away you go. Well, almost... Run the Sweevo tape now and when there's nothing left on the tape to load, swap the tape for your one with the code on and it'll load. Now it's away you go!

You can freeze the game with symbol shift and 5 and 'S' saves the screen. As an added bonus, Hacker has included a little program to give you a full screen copy i.e. the bottom two lines get

Well, that's about it for this month and this is the last you'll hear from me. But don't despair, ZZKJ'll be back with your POKEs and tips next month so give him a good start and send all your hacking hints to ZZKJ, Hacking Away, YS, 14 Rathbone Place, London, W1P 1DE.

All letters win a YS badge

SHOW US WIMPY

E'lite anything..... including the last Wimpy in Walsall. E as
out to lunch with Karen and Nigel, the team that signed

I never knew the Editor hated me so much. 'We need somebody to go to Walsall to interview a couple of programmers,' he said as he tapped his barometer absent-mindedly. 'Rachael!' Which is why I found myself on a train speeding north into an increasingly snowy landscape with the growing realisation that I wasn't just being sent to Coventry (which is several stops earlier — Geographical Note) but Siberia itself!

I arrived at Elite's Aldridge HQ around lunchtime, camera round my neck and tape recorder in my hand. Karen Trueman, the graphics half of the duo was out of the building. But Nigel Alderton, the man responsible for the coding was sitting drinking coffee in front of a row of arcade machines, all looking like the victims of some crazed disembowelling. This violation allows difficulty levels to be set so that the games can be closely analysed in the quest to create accurate, licensed copies. And there, yes, is a *Ghosts And Goblins* machine, the title the two are currently converting.

I dragged Nigel off to a side room, sat him firmly in a chair and set up the camera. If this was Siberia, I'd be conducting the interrogation.

Nigel Alderton

RJS: What... hey, is this thing working?

Nigel: I think it is now.

RJS: Right — I'm here in the snowy home of Elite software. (Pause to think of question.) Well — tell us something about yourself. Hobbies?

Nigel: Hobbies? I play snooker, tennis — mmm — I do a bit of weight-lifting.

RJS: But nothing to do with computers at all?

Nigel: No.

(Laughter)

RJS: How old are you?

Nigel: Nineteen

RJS: And how long have you been programming?

Nigel: Two or three years. (Camera clicks) Do you want a smile?

RJS: No, just carry on talking. Do you just program for the Spectrum?

Nigel: I've written for the Spectrum and Amstrad so far.

RJS: So you're Z80.

Nigel: Yes.

RJS: How did you get into machine code?

Nigel: I bought a ZX81 first and started messing about on it and bought a book. Then I just sort of messed about on the Spectrum and wrote a game, *Chuckie Egg*, and that sold. Then I went to work for Ocean — worked for them for a year in-house. And then I went freelance and I've done *Commando* for this place.

RJS: Right. So you're totally freelance now?

Nigel: Yeah — completely freelance.

RJS: So, talking in generalities, how much could you expect to make as a freelance?

Nigel: Anything between three thousand and ten thousand a program. Assuming that program takes three or four months to write, then in theory you could be on forty grand a year, but nobody is. It's almost impossible.

RJS: How does a program happen then? How do you begin converting an arcade machine?

Nigel: Err — basically, you look at the arcade game — decide whether it can be done or not on the micro — then you tear it to pieces, analyse it. If it's got a big map, map it out, work out how much memory you're going to need for graphics, how much memory for sprites, how much memory for the program. After that just start writing it.

RJS: That makes it sound very simple. (Laughter) Is *Ghosts And Goblins* going to be a particularly hard one to convert?

Nigel: Well — I'm only two weeks into it. No major problems so far.

RJS: What sort of mind does it take to become a machine code programmer? I'm sure most of the readers won't have any idea...

Nigel: Warped (Laughter) You've got to have a logical mind.

RJS: Yes.

Nigel: (Pause) It's difficult to describe. You don't have to have much imagination. You've got to have... you just got to be basically a logical person.

RJS: Are you based around here?

Nigel: No — I live in Manchester, but when we wrote *Commando* they brought

YOUR

Even as we eat, Rachael Smith is totally
Walsall pact to program Ghosts And Goblins...

us down here because they wanted to
keep an eye on us.

RJS: Right. (Pause) How do you do
your writing? Do you work on Spectrums
or...?

Nigel: No. I use a Tatung Einstein as a
development machine.

RJS: Why the Einstein?

Nigel: It's... it's cheap, it's... er, it's got
a nice keyboard and it's got discs.

Teamwork

Despite my hours of journalistic
training (both of them) I was beginning
to run short of questions, so hoping to
divert Nigel from the fact, I asked
about the still absent Karen.

RJS: One thing I've got to ask is, if
you're based in Manchester, how does
the work as part of a team go? Is Karen
based near you?

Nigel: No, Karen works down here. The
graphics... what usually happens is I
write out a specification, and once I've
decided how big a sprite's going to be,
I'll just send her the size of the sprite
and she'll go ahead and do it. If it's any
good, I'll take it, and if it's not
somebody's got to do it again.

RJS: How about other programmers in
a team?

Nigel: That's a knack. It's definitely a
knack. Some people just can't take it.
It's how to split the work up, how to
divide the game, sort of roughly down
the middle, so when you put together
the parts it works.

Karen Trueman

My well of questions now dry, we went
in search of Karen and at last located
her, hiding in the programmers' room.
Okay, Karen Trueman, this is your
life...

RJS: Okay, we've got to go through this
horrible interview bit again. Do you hate
being interviewed, Karen?

Karen: I've never been interviewed
before.

RJS: Fine. I've never done an interview
before. How long have you been
programming?

Karen: (Pause) About three months.

RJS: And what did you do before
programming?

Karen: (Long pause) I was at school. I
took art. (Silence. I get the idea Karen is
shy.)

RJS: Okay — a nice easy question.
What's your favourite colour.

Karen: Bright yellow.

RJS: And what's your favourite game?

Karen: Chuckie Egg.

RJS: It all ties together, doesn't it. Tell
me how you do the graphics.

Karen: Well, I use this graphics tool
called Arthur. Elite wrote this in-house
graphics tool about...

Nigel: Forty five years ago.

Karen: (Laughter) And I use that.

RJS: Had you done any computer
graphics before?

Karen: No. But I did a few sprites on
Commando. Rory started it and I
finished it. (Very long silence)

RJS: And how do you intend to make
your fortune.

Karen: Marry a millionaire.

The business lunch.

Okay, I had a feeling that this wasn't
going as it should. The Ed's last words
to me had been, 'Keep it wacky'. ('Keep
it cheap' as I remember, Ed). So I
suggested that we go out to the pub to
get a bit informal... only in Siberia the
pubs shut at 2.30. Only one thing for it
— into a taxi and hang the expense —
Ed's paying! (That's what you think!
Ed)

RJS: Walsall, please.

Maureen: (the taxi driver): Right.

RJS: So how do you do the graphics,
Karen?

Karen: Well, we usually get the arcade
version in so we can have a look, then
they'll just tell us the sizes they need.

RJS: Do you start with the backgrounds
then go on with the sprites...?

Karen: I usually start with the sprites.
Get them over and done with first then
get on with the screens.

RJS: Have you got a computer.

Karen: My brother has and I'll get a
Spectrum so I can work at home.

Maureen: That used to be the airport.
All: Really?

We arrive in Walsall, a town which just
fails to remind me of New York, and
trudge through the slush to the local
Wimpy where we defrost our feet and

we
order. Karen
insists that I add that
she's a veggie and had to be forced
into this carnivorous cavern.

RJS: Two quarter pounders with chips
one coke, a milk and an orange.

Wimpy Girl: Right. That's four
pounds forty six, please.

RJS: Thanks. Let's sit here. (We settle
in and I get the camera.)

RJS: I'd imagine that as a team grows
there's more potential for disagreement.
The graphics people demanding more
space for the graphics — or doesn't that
happen?

Nigel: No, because there's always, like
a superior, isn't there?

Karen: We're the underdogs.

RJS: Aww!

Nigel: Does anybody else get to listen
to this tape recording?

RJS: No. I'm going to make it all up
when I get back anyhow, so you can say
what you want.

Wimpy Girl: Two cheeseburgers and
chips.

RJS: I'll just go get those. Say
something witty, someone.

Nigel: Do you want a chip? She's going
to get some lovely slurping noises in
this.

Karen: I don't envy her.

Nigel: Chomp, chomp, chomp.

Karen: Slurp, slurp

Nigel: Chomp, chomp

RJS: (Returning) So here we are, and
I'm hoping you'll forget we're recording
this.

Nigel: She just did. We were slagging
you off!

And so I finally broke down the
barriers. We stepped outside and in a
totally informal manner Karen and
Nigel grabbed handfuls of snow and
hurled them at me. Finally, exhausted,
they left me sprawled in the slush.
Somehow I raised the strength to type
this and now... PLEASE, LET ME
COME HOME!

Next month: Macdonalds with
Maureen.

MICRODRIVIN'

What's made by Sinclair, can be driven by people under 16, is not very high off the ground and prone to crashing? No, it's not a C5 — it's a microdrive! Andy Pennell takes it away...

Strange things have happened since I got a microdrive and Interface 1 at Christmas. When I first switch it on everything works fine but once it's been on for a while one drive seizes up totally or gives spurious 'out of memory' errors. Switching it on and off again makes no difference either.

NR Wood, Basingstoke

That certainly is a bit weird. I haven't heard of anything like this before. It sounds as though it could be your power supply as it causes most time-related problems. Since you say you're also using an Alphacom printer and joystick interface I have a feeling that once it warms up it's all too much for your standard power supply. Try disconnecting the printer when playing games and the joystick when you need to print something as this should reduce the load, and hopefully cure the 'strange happenings'.

How can I get my Brother HR5 to print what it shows on the screen, particularly from *Masterfile*? The print option in it uses the COPY command but my interface doesn't support it.

SF Mallon, Hove

If you're happy with text-only screen dumps (and from *Masterfile* that should be okay) then you can use this

Here's a very useful tip from H Evans from Leicester. As a CAT doesn't tell you what the type of files are, you can add something to the name to indicate this. One way of doing this is to use an extension (like CP/M) for example TEST.BAS but this sacrifices four characters from the normally restrictive 10. A better way that only takes up one character is to use a token on the end of the name, for example DATA, CODE, SCREEN\$ etc. though you'll have to decide which token you

little program on any printer and interface.

```
120 FOR Y=0 TO 21
130 FOR X=0 TO 31
140 LET AS=SCREEN$(Y,X)
150 IF AS=="THEN LET AS="""
160 LPRINT AS;
170 NEXT X
180 LPRINT
190 NEXT Y
```

It assumes that LPRINT works (for the Interface 1 use OPEN #3, "T"). You'll probably have to change the line numbers to be used with *Masterfile*. Graphics dumps are a little more complicated.

I'm writing about the recurring problems of syntax errors in microdrive commands. Another reader wrote in with this problem and your reply was to ensure that the edge connectors were clean. Well, I can assure you that my connectors are immaculate but one method to get around the problem is to ease off the short ribbon cable between the interface and drive. If the problem recurs then the ribbon should be pushed back in again. This is a real nuisance and I've written to Sinclair asking for advice on making a more permanent solution.

Robin Buncombe, London

I've no further ideas on how to cure this problem but I'd be very interested in Sinclair's reply. I've a feeling they're going to say 'send it back and Sinclair'll fix it for you' though.

like best for Basic programs. You could also use two tokens such as SCREEN\$ LOADER as that'll make file types even more obvious.

Thanks for that and don't forget I always welcome tips from readers — all you've got to do is send them to me, Andrew Pennell at Microdrivin', YS, 14 Rathbone Place, London W1P 1DE. Well, that's it for this month but look out for next month's Microdrivin' as I'll be reviewing a microdrive sector editor.

For Your **SPECIAL OFFERS**
SPECTRUM/PLUS/128K

QuickShot II

INCLUDING INTERFACE
PLUGS STRAIGHT INTO SPECTRUM/PLUS

£15.99 POST FREE

- TOP + TRIGGER FIRE BUTTON

* US GOONIES
VS COMPO

**Have a yo ho ho
with our fabulous
compo — it'll grab
you by the Goonies!**

Shiver me timbers! Look what we found during our annual spring clean at Castle Rathbone. A battered parchment, yellow with age. And on it a treasure map of the long lost Isle of Sinclair. There's treasure on that there island, and lots of goodies for you if you can help us find it. And this is what you do... Look at the clues. The first one tells you the starting point — then it's only a matter of following the clues through. Each one'll give you a location on the map — all you've got to do is draw a line between them. Once you've found where the treasure is buried, draw an 'X' to mark the spot. Then send the whole page, or a photocopy, to **Pieces of Eight Compo**, 14 Rathbone Place, London W1P 1DE. The four first prize winners will receive a piece of eight (an antique silver coin to you) and a copy of US Gold's great new game **'The Goonies'**. The 20 runners up will receive a copy of the game each.

The Editor's decision is final
— have you seen his left hook? **Employees of US Gold and Sportscene Specialist Press will be made to walk the plank if they attempt to enter.**
Entries must reach us by Capns log, star date 31.5.86.

BATMAN

HOLY MEGAGAMES!

Holy Smoke! High above Gotham City a shaft of light slices through the darkness. But only one man in the metropolis knows its true meaning — it's a call for help that he has answered many times before. Bruce Wayne races to the phone and hears a familiar voice.

Commissioner Gordon:

Batman? (For it is he!) Bad news. Robin's been kidnapped.

Batman: Impossible! He's down in the Batcave.

Commissioner Gordon: Then this ransom note's a ruse. But...

Has Robin been kidnapped? Or has the Boy Wonder wandered off? Can the Caped Crusader come to his rescue? Will the Penguin end up with egg on his face? Has the Joker cracked it? Is Catwoman feline felonious? All may (or may not) be revealed by Tommy 'Boy Wonder' Nash as he reviews Ocean's new megagame, Batman.

Wheeeeeee! Batman comes slip slidin' away down the Batpole and he's off on his Robin rescue mission. Yes, that's how the straight-backed, square-chinned superhero of comic strip and silver screen makes his debut into software. Okay, so he's a mite chubbier than you may remember him from the pages of DC Comics but his cloak and mask make him instantly recognisable. But now he's on his own — sans sidekick. The other half of the Dynamic Duo has gone walkies, though the exact reason for this hadn't been concocted when I saw the game. At that time, the finishing touches were just being added to the plot though the game itself was a hundred per cent complete. No doubt some perfectly implausible explanation involving one of Batman's arch enemies will have been thought up by the time the game hits your Speccy.

Originally, Robin was meant to have a starring role in the game alongside his crepuscular companion and the programmer's even got round to designing a spritely figure for him. But then they hit a stumbling block. How do you make it easy for the player to control two superheroes simultaneously? It was at this point that Robin was conveniently kidnapped!

Batman's first task is to collect

the four items him in his powers. But the tidiest of he has to find out where he left the things in the initial rooms of the game that make up the Batcave. He's after his Batboots that allow him to jump; his Batbag so he can pick things up; his Batthruster, to shoot him sideways and his Batbelt, which reduces the pull of gravity on him so he can 'fly' further. The game's cleverly designed so that you can't progress beyond a certain stage without these items. With them, the Caped Crusader is ready to go crime-fighting.

Robin didn't go without a struggle. The seven parts of the Batcraft, which he was servicing at the time of the snatch, are scattered all around the Batacombs. And before Batman can rush to his rescue, he must find all the bits so that they can be teleported to the launchpad, situated at the top of the very highest tower. The game ends when Batman's sitting in the reassembled craft ready to rescue Robin and bring the Gotham gangsters who got him to justice. (Note for Batfans: the reason for having a batcraft instead of the Batmobile is that a vehicle with wheels would've taken up too much memory!)

The Batacombs are a complex maze of at least 150 rooms spread

over nine floors. Well, it might be 150 but it could just as easily be 151 or even 153. The programmers weren't sure and I wasn't counting! The screens have a definite *Knightlore* look about them but the much larger number of rooms means many more puzzles. Batman will test your arcade/timing skills to the limit but it'll also burn your brain out with its bewildering range of tricks and traps.

The Ultimate influence is unmistakable, of course. The game has a similar technique of forcing you through doors if you're not quite lined up. And you can pick up objects in a room and use them there but you can't transport them to other screens à la *Fairlight*. And the rooms reset to their original state each time you re-enter them. But the game's a definite development from the *Knightlore* days. Take, for example, the reincarnation pills that allow you to restart the game from the point at which you collected one last — great idea that. And then there's the ability to define a single key that lets you pick up and jump at the same time. Cuts out all the contortions with keys that you had to go through to achieve the Ultimate accolade. And Batman keeps up a constant speed no matter how many objects there are in a room — none of those short, slow steps that held Sabreman back on full

screens.

It's this attention to detail that marks Batman out as a true megagame. Hardly surprising then that it's taken ten months to write. You're even given three options for the sound effects. *Nasty* lets you hear every sound that resounds round the Batacombs; *Useful* only makes a noise when the caped one crashes into things; and *Late At Night* is silent.

The only thing that's missing is the crazy cast of criminals from the original cartoons. If ever there's a follow-up, perhaps the programmers will pick up a Penguin or take the gag out of the Joker's mouth...

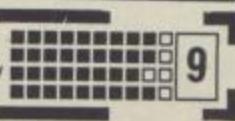

How does Batman's mum call him in for a meal?

Dinner dinner dinner dinner, dinner dinner dinner dinner — BATMAN!

EN SUITE BATROOMS

That's a re-incarnation pill up there on top of the pillar. Fortunately it doesn't have to be taken internally — getting one of those down your gob could prove difficult. Use the spring (S for spring) to boing yourself up. With a pill in your possession, and there are six in all, you don't have to restart the game from the beginning when you run out of lives — you can choose to start at the point where you collected the pill. (Programmers' note: adding re-incarnation pills to your programs is not harmful to the memory. Batman only uses four bytes to store the data for lives, objects collected, room and so on.)

Just when you thought it was safe to call it an Ultimate clone... Double rooms like this are dotted all over the Batacombs but this is the first — and it's quite a shock if you're not expecting it. These rooms also add to the realism of the game — are all the rooms in your house the same shape? — but it's still possible to map the game.

BAT MOBILES

Does he look the bat's whiskers, or what? He walks, he runs, he jumps, he stamps his foot — now you can collect the complete set of Bat capers. This print-out shows you some of the programmers' finished ideas for the game's graphics. Besides Batman, you can see a selection of the dastardly devils out to do him in. Okay, all our old faves like the Joker and the Riddler have failed to show but the game's still chocka with cookey customers.

LATER THAT SAME EVENING

This is a one-way walkway to destruction. Step on it and you'll be whisked away to your doom — it's a conveyor belt. Just keep moving in an equal and opposite direction and you should be okay.

It's the Caped Crusader himself — bit of a fat bat! Okay, so he's put on weight since we last saw him but he still keeps active. That's why when you leave him alone too long, he taps his foot to tell you to put a move on.

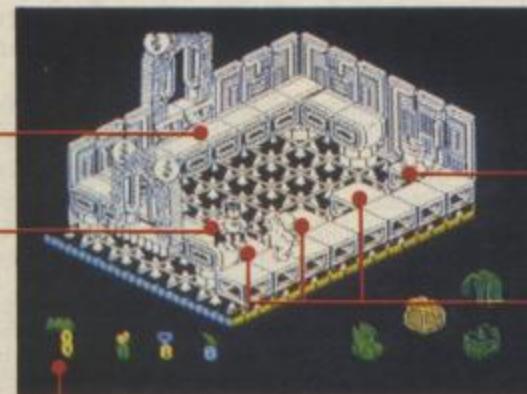

Here's the Bathruster sneakily tucked away behind these bricks. The one colour rooms can make it a bit tricky to spot objects sometimes so the programmers have seen to it that they move slightly as you enter a room.

Just when Batman's in a real batjam and it looks like he's breathed his last, something always crops up. The game's the same — sometimes. There's a random 'dog's life' that may just save your bacon.

This is no stairway to heaven — you'll soon find that the steps have a tendency to disintegrate as you tread on them. Which ones? You'll find out soon enough!

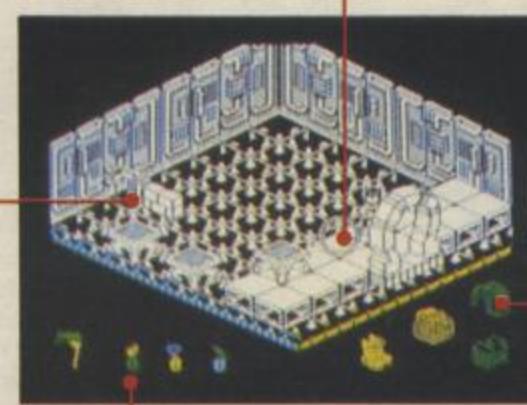

You can see here the objects that are stored in your batbag. But even Batman can only carry things of a reasonable size like this spring. If you need to use a larger object to stand on, you'll just have to push it into position.

Keeping taking the tablets. For instance, find a shield pill and you'll be invulnerable for 99 seconds — the time ticks away on this clock. You can recognise all the batpills 'cos they look just like baby Batman clones.

Batman? Pah, Catman — he starts out with nine lives. At least you can't accuse the game of being stingy. But then with 150 odd rooms to explore, you're gonna need them. Plus, there are a further 22 batpills scattered around the rooms that'll each give you an extra life.

There've been a fair few mild green fairies toiling to make a soap bubble strong enough to take your weight. Push it over towards the bricks on the other side of the room then get ready for a spot of cloak-hanging to reach the other side.

Jumping Jack Rabbits, Robin! There are batpills in the game that'll each give you ten double height jumps. You can see how many you have left here. But use them carefully — you only have to waste one jump and it may mean you won't be able to reach that illusive object.

Here's a tile of the unexpected. Always keep an eye open for the up exits to the floors above you.

Faster than a speeding bullet... Well, he is when he's found one of the batpills that speeds him up for 99 paces. The countdown comes here.

These boots were made for jumping and that's just what they'll do! Course, trying them on for size can prove a little tricky. And getting out of the room again is no easy matter. Use your carbon-reinforced cloak to hang on by the very last thread... and jump!

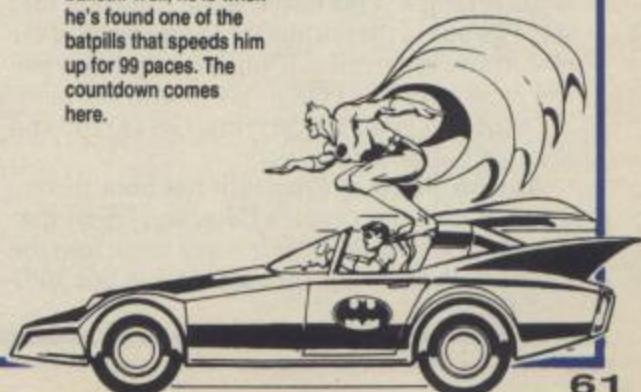

If you're going to keep out of the hairy monster's way, you'll need to find out which of the three bricks are safe. Well, the first is okay, the second disintegrates and the third is a conveyor belt that'll dump you straight onto the deadly floor. So, take care.

When you've got your grips on an object it won't remain permanently in your possession unless you drop it and pick it up again. It's a little trick you can try out on the thruster. Forget and leave the room, and the thruster will return to its original position.

All over the Batacombs there are hidden rooms and the only way you're going to discover them is by walking into walls. Course, most of the time you'll just end up with a sore head...

It's not only picking up objects that can cause problems. Sometimes just getting from one side of a room to another can get Batman's knickers in a twist — even though he does wear them outside his trews.

Here boy, walkies. This canny canine'll make a dog's dinner of you but you can put him to good use. Wait for Rover's return then drop the spring on his head. Now it's your turn. Jump on to the spring and bounce up into the next room where you'll find a bit of the Batcraft.

Y

ight, to begin let me say that these are going to be some of the best adventure pages around, so keep reading 'em. And just so you know, I'll be dealing only with straightforward text and text'n'graphics adventures, with maybe some variations like *The Fourth Protocol* allowed to creep in. But, arcade adventures will be dealt with elsewhere in the mag. Okay the odd one might sneak in when I'm not looking, but if I come across that Wally Week in these pages I'll throw him out at once.

If you're writing in and want a personal answer to a problem, then enclose a stamped addressed envelope. If you don't then I'll assume you're happy for me to deal with your problem in these pages. Mind you, just because you enclose an sae it doesn't mean you won't be seeing your name here.

Address your letters to me at *Your Sinclair*. And remember, if you've got a query for a different department, you'll have to go wild and splash out 12p on another stamp otherwise it's likely to get lost among the old axes and dead dwarves that lie around my desk.

Always try to ask a specific question, too. How not to do it is shown by **Darren Clark**, of 8 Meadow Road, Mirehouse, Whitehaven, Cumbria CA28 8EJ. "How do you finish *Spiderman*?" Darren asks. Well, it depends how far you've got, Darren. Do you mean right from the start, from about half-way through, or just the last few problems? Anyway, for help on that, *The Hulk*, and just about any adventure you care to name, contact **James Elliott**, 266 Carseview, Tullibody, Alloa FK10 2SU.

Another example of how not to do it is from **M.N. Andrews**, of 116 Rosebery Avenue, Yeovil, Somerset BA21 5LF, who says he or she is pulling out his or her hair trying to get past the Guardians of the Gates. Fine, but it'd make things just a touch easier if you told us the name of the adventure. We don't want people pointing at baldies in the street and saying "They must read *Your Sinclair*," do we?

Now on to this 'El Supremo' business. So many readers have completed so many adventures that I think instead I'll start a 'Big-Head of the Month' award, so just watch it. What I would like, though, is to hear from anyone who thinks they might be the first to finish an adventure. Write in if you reckon you have a claim to fame like that. You never know, we may even feature your ugly mug in these pages.

There's no doubt in my mind, though, that the 'El Supremo' title has to go to **John Wilson** of Rochdale, who's first in with completed solutions. And his right to the title is even supported by other readers who acknowledge his help. John himself hardly ever seems to need a clue of any kind. I hereby declare him the Rochdale Balrog. (*Let's hope it's not catching*. Ed). We'll find out how he does it in a future issue.

Now, a few tips to show that adventures are capable of POKEing a program as well as the next person. **Jim Grimwood** of London found you can break into Level 9's *Dungeon Adventure* if you get stuck in the tower. It's at this point that there's a bug in the routine that keeps track of the objects you're carrying. If you have too many you can press BREAK, POKE 26490 with the number of objects you were carrying, GOTO 100 and then get out of the exit door.

Adrian Shaw of Plymouth has been tinkering around in the *Oracle's Cave*, and found that you can press the down arrow key to get into the program, then change the value of T in line 3002

to alter the number of days you have in which to complete your task. Increase it to 36000 to give you 50 days, for example, or down to below 3600 to start making the game tougher.

Most adventures are quite hard enough as it is, and **Andrew Smith** of Fakenham, Norfolk, is finding that he Karn't do *Heroes Of Karn*, because he's having trouble finding Khadim and also according to him, because he can't open the pearl. I think you mean the clam, Andrew, in which maybe you hope to find a pearl. You can't get into that till quite late on in the adventure. And as you might've expected you'll need a tool of some kind to prise it open: RABW ORCA EKIL. As you see, I'll be printing the occasional solution backwards, in case some people are trying to figure out that particular problem for themselves. Though don't be like a reader (on another magazine, of course) who wrote to ask me if that meant the answer had to be typed into the adventure backwards if it didn't work the right way round.

Did you know that there was a text-only version of *The Hobbit*? I didn't, till several readers wrote in to point out that if you choose 'N' as the key to press to remove the loading screen and start the game proper, the graphics don't appear. It works — try it. I think the star of that adventure should be nicknamed Bilbo Buggins, because of the numbers of bugs in the program. The latest to come my way is from **Ian Ormesher** of Bootle, who says that in the original version 1.1 of the game it was impossible to kill the dragon. That's because you couldn't go east from the town in the middle of the Long Lake. That's because you couldn't go east from the town in the middle of the Long Lake. This has been corrected in version 1.2, mind. It sounds like it was a slight fault in the routine where you must ask Elrond to read the map for you, and the route he tells you about is only actually filled in on the map at that point. If you don't have him read the map to you then the route won't exist. The way to spot the difference between the versions is that the names of the programmers have been added on the loading screen for 1.2. Have any other readers found this problem? My version is the second one, so I can't check it out.

I'm sure we'll soon be encountering more and more bugs on *Lord Of The Rings* in the months to come. The most obvious one is in the first location, if you try to SEARCH DESK. See the response you get to that! Any more from you little bug... erm, you little bug-hunters out there?

One of the problems in Melbourne House's latest is getting through the maze in the Mines of Moria. A reader from Christchurch in Dorset with the almost perfect adventurer's name of **Richard Grandorge** got himself lost at this point. I won't print the route through the mines backwards, as you might find yourself even more lost than you were to start with. So, if you don't want to know, don't read that it's UP, EAST, EAST, EAST, DOWN, DOWN, WEST, WEST, WEST, DOWN — you should then find yourself in a corridor.

Richard and others have also had trouble with the barrow-wight. It seems that violence only meets with violence. A peaceful approach won't get you anywhere, so: ELBIS IVNI EMOC EBDN AGNIR RAEW. Another common problem is asked by **Tim Chamberlain** of 17 Colthurst Way, Leicester LE5 2LF, and that's "Can you kill the Black Riders?" No, cowardice is the answer, but you've got to know which way to go to avoid them. If they arrive, the general rule is HTUO SROH TRON OGYL NO. And now if you'll excuse me, I'm going west till the next issue.

LOST SOULS

If anyone's ever helped you on an adventure remember that and see if you can now help any of the following with a quick letter solving their problem.

J. Rose, 12 Rusholme Grove, Rusholme, Manchester. In *Sherlock*, how to prove to Lestrade that Mrs Brown killed herself, that Foulkes is innocent and that the body is really Tricia Fender. In *Valkyrie 17*, how to pass rats, get meat and get currency other than Grotniks.

Allan Crosbie, 17 Inchcolm Dr, N. Queensferry, Fife KY11 1LD. In *Project Gibraltar*, how to get through dock customs and find civilisation after parachuting from plane. In *The Hobbit* how to find the key to open the trapdoor in the Goblins' Dungeon (you're barking up the wrong key there, Allan.)

J. Rickman, 25 Beech Wood Ave, New Milton, Hants BH25 5NB. In *Ship Of Doom*, how to get the key from under the glass cover in the key room.

Lee Crump, 6 Colebrook Ave, Shirley, Southampton, Hants SO1 5NR. In *Sherlock*, how do you decode the notes so they're no longer faulty in Basil's house?

D.T. Ash, 144 The Drive, Bexley, Kent DA5 3BX. In *The Hobbit* how to deal with the bulbous eyes, and in *Legend* what to say to the dragon (well, what do you say to a dragon?), and what to offer the robbers that surround you in the woods.

Paul Bruce, 56 Meadowbank, Kirkwall, Orkney, Scotland KW15 1QL has a simple message on *Sherlock*: HELP!! We all know the feeling, Paul, but maybe a specific question would help someone help you.

D.M. Markillie, 26 Marshall Road, Cambridge CB1 4TY. How to fly the plane and what is its destination in *Atlas Assignment*. I don't know that adventure but it doesn't sound much fun searching for an atlas. Every school's got hundreds of them.

Owen Dunn hasn't done *Se-Kaa Of Asia* because he can't go in the castle and his staff is useless. Sounds like Basil Fawlty again. Help Owen out at 78 Roche Way, Wellingborough.

Nicholas Redman, 2 Hawthorn Ave, Marple, Rosehill, Stockport, Cheshire SK1 6EP. In *Finders Keepers* how to get out of the exit above the puss-with-no-boots, and in *Ship Of Doom* how to get the key when you've broken the glass case. (Not that one again!)

Not a maiden but definitely in distress is *Spellbound*'s **Andrew Heath**, 52 Lower Dolcliff Rd, Mexborough, Nr Doncaster, S. Yorks S64 9PA. How to get to the bottom two floors of the game and how to enter the gas-filled rooms.

KIND SOULS

I know there won't ever be a shortage of *Lost Souls*, stuck in adventures and writing for clues, but I hope I'll also be hearing from all you Kind Souls too, offering to share your success with others and giving a helping hand by way of a map, a clue... or any unwanted old lamps you have lying around.

To start this hopefully never-ending-story (now there's a subtle link) is **David Inglis**, 35 Kirkbars Ave, Cambuslang, Glasgow G72 8NT. David finished and mapped *The Never Ending Story*, except for a bit near the end where, he says, he can't remember how he got from the stairs to the door. We've all had nights like that, David. If you want any help on *NES*, then, send David an sae — and if he can remember how to get to the postbox he'll solve your problem.

Or write to **Alan Fairclough**, 23 Melides Gardens, Tranmere, Birkenhead, Merseyside L42 5NG, who completed *NES* in 12 hours, and then went on to polish off *Lord Of The Rings*, which people seem to be finding much easier than *The Hobbit*, and rather a disappointment. "Not a patch on *The Hobbit*," Alan reckons.

Talking of which, there's help available from another reader on *The Hobbit*, *Hampstead*, *Valkyrie 17*, *Velnor's Lair* and *Pyjamarama* (how did Wally

adventures

Mike Gerrard joins the YS team to champion the cause of Spectrum adventurers everywhere.

treep into my column — get out at once!) He's **Vincent O'Brien, 23 Manor Road, Shevington, Wigan, Lancs WN6 8EE.** Is he a Wigan adventurer with no peer?

You'll have to send the postman further north if you want help on *Erik The Viking*. No, not quite to Norway, but to **Euan Terras, 9 Leslie Terrace, Prestwick, Ayrshire KA9 1LN.** Euan's also willing to help on *Hampstead, Urban Upstart, Sherlock, Spiderman, The Hobbit, Valkyrie 17, Fourth Protocol Part I*, all Artic and Channel 8 (R.I.P.) adventures, and most *Quill'd* adventures (sounds like you've got an early *Quill* that allows you to inspect an adventure's data — am I right?)

If you're wondering why I repeat titles like *The Hobbit*, which several people have written in about, well it's because if someone's stuck in more than one adventure, he might be able to find one other reader who can help on them all, rather than have to write to two or three. If you do write, never forget to send a stamped addressed envelope.

As for those who've completed literally dozens of adventures, I'm saving their moment of glory for a future issue, but meanwhile a few quickies:

The Hobbit, Sub-Sunk, Urban Upstart, Red Moon, Emerald Isle, Forest At World's End and Twin Kingdom Valley. **Kevin McIntosh, 419 Great Western Rd, Aberdeen AB1 6NJ.**

Planet of Death, Valkyrie 17 and Fourth Protocol. **Peter Bates, 21 Bedford Gardens, Tinshill, Leeds LS16 6DH.**

Spiderman and Urban Upstart. **James Winnard, 68 Bexley Drive, Normanby, Cleveland.**

And finally a plug for the Hints Archive for Lost Adventurers (or HALA for short), run by **Sonia Griffiths-Glover** (or Sonia for short), from 38 Bellfield Drive, Willerby, E. Yorkshire HU10 6HQ. HALA offers help on any adventure, and in return only asks that you send in something for the archive, to enable it to be built up. If you send Sonia the usual sace she'll send you details, and she may even put a kiss at the foot of your letter, as she did on mine — but she'd have got the plug anyway!

ADVENTURERS INTERNATIONAL

If you're feeling kind and want to save a Danish adventurer's bacon, you can do your bit for international relations and contact **Nikolai S. Christensen of Kildevej 15, 8600 Silkeborg, Denmark**, who's sent two postcards depicting stamps from Greenland for some reason. Red herrings I expect. Anyway, Nikolai's having trouble robbing the tax-collector in *Robin Of Sherwood*, and getting to the town in *Valkyrie 17* (learned how to ski, got your skis and your ski poles, Nikolai?)

From the same neck of the northern woods is **Steven Snedker, Hovedvesen 124, 2600 Glostrup, Denmark**, who wants more tips and maps (just what we're planning to give you), and also needs to get into Schloss Drakenfeld in *Valkyrie 17*. Make sure you've 'bin' everywhere outside the Schloss, and if you need a password it's a 10-letter word that's in my previous sentence.

Yet more from the land of the Danes, with **Martin Brinks, G1. Hellebaekvej 68a, 3000 Elsinore, Denmark**. Martin's caught up in the colour codes of *Snowball*, and anyone who's gone through that will have sympathy for him, I'm sure. If you have enough, write and explain how to use the crew member's code — it's a lengthy explanation which there isn't really room for in this short section.

Finally, for a slight change, a letter from Sweden, with **Kristoffer Lindberg, Rödkallensväg 11, 95141 Lulea, Sweden**. Kristoffer found that *The Never Ending Story* didn't quite live up to its name as he polished it off in three days, but needs help from anyone currently playing *Sherlock, Sorderon's Shadow* or *Hampstead*, though he doesn't say where he's stuck. What a Swedish adventurer makes of the UB40's, gentlemen's clubs and so on in *Hampstead* I don't know, but I'd be quite happy to hear, and from any other adventurers international.

Our adventure section has increased considerably this month, and from now on it'll be in the very capable hands of adventure addict, **Mike Gerrard**. Mike is already well-known for his adventure columns in other computer magazines, and he has also written several adventure books and articles for the *Guardian*.

News

There's quite an incentive to buy the Spectrum version of *Incentive's Graphics Adventure Creator* when it's released on May 1st. According to Ian Andrew the software house is actively looking for adventures that've been written using the program (which has already had rave reviews in its Amstrad version.) "The adventures will have to be good, though," Ian says. "At the moment we're receiving two or three a day written using the Amstrad GAC, and we've only found one that's different enough to be worth publishing under our new *Medallion Adventures* label. We definitely want to see Spectrum adventures, though."

The Spectrum version will have all the features of the Amstrad version, plus a few extra ones. The price has yet to be set — also the case for *Incentive's* next Spectrum release in May/June, *Axe*, a strategy graphics adventure with battle sequences, complete with book by Frank Oliver and graphics from *Incentive's* regular art-man, *Pete Carter*.

I asked Global Software, whose 4-adventure compilation is this month's main review, if it had any other Spectrum releases lined up. **Mike Daniels** said, "We've got a

couple of adventures almost ready, written on the Amstrad using *Incentive's GAC*, and we're just waiting for the Spectrum version of that in order to convert them. One's called *The Beer Hunter*, which is obviously a boozy adventure in which you have to manage to get back into a party you've been thrown out of, and the other's *Old Scores*. This is a modern-day adventure, based in and around the South Bank area in London. It has over 200 locations and three major puzzles to solve in a real-time of about two hours.

We've got back-stage tours of places like the Royal Festival Hall arranged to tie in with it."

Talking of art-men, one of my own heroes is **Terry Greer**, who produces the stunning pictures in *Interceptor's* adventures. Though the software house recently cut the price of all their adventures to £1.99, fellow fans will no doubt be pleased to hear that Terry's currently working on their next release with his regular partner, *David Banner*. "It's an adventure revolving around an earthquake," was all Terry would tell me, though.

So in the 128 front it seems to be very much a case of "Wait and see." Though Ocean has extended *The Never-Ending Story* (packaged with every 128 sold) other adventure publishers are in the main saying that they'd like to see how the 128 sells before knuckling down and producing anything for it. Oh well, it gives us chance to catch up on a few more of those tiny 48K games.

Some of you *Swords and Sorcery* fans out there might like to know that PSS has produced a second level to the original game, along with various other goodies like cassette labels for saving your favourite characters and *The Complete Guide To Monsters*, — I think everyone could suggest some entries for that! On its own the new package costs £4.95 mail order only, or you can buy the original level one release as well for a package price of £14.95

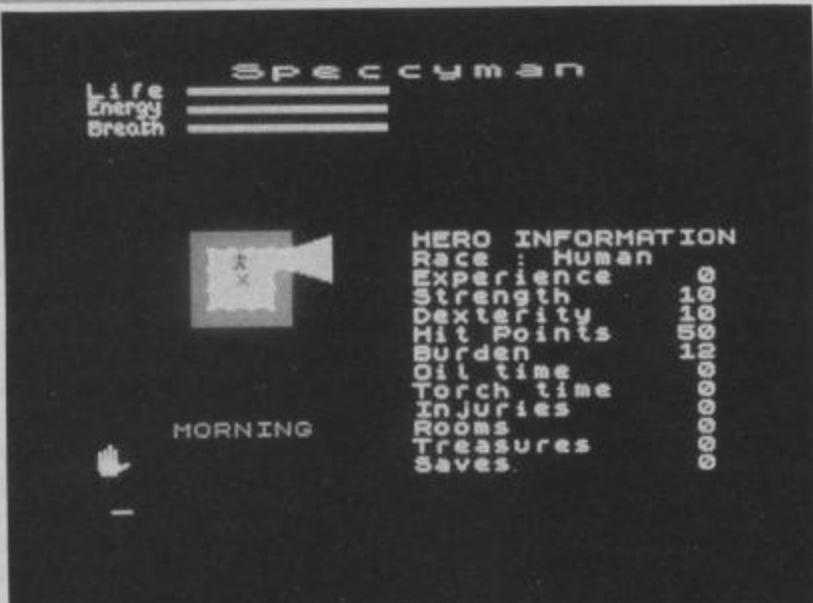

Figures just published by *The Adventurer's Club Ltd* show that they now have a membership of over 2,000, and about 40% of these are Spectrum owners. Half the members are in the 18-35 age group, though this may have something to do with the £10.95 membership fee. They do give value for money, however, with a regular heavy dossier thumping through your letterbox and access to a phone-in helpline five days a week. The news that *Pete Austin's* just agreed to be their President is a feather in their cap, so if you fancy reading his monthly column in the club dossier, give 'em a ring on 01-794 1261.

YS Adventures

FOURMOS T ADVENTURES

Compilations are definitely the in-thing at the moment. Here's the first especially for adventurers, although it contains four lesser-known adventures rather than a group of mega-hits. Still, anything that carries Tony Bridge's seal of approval has to be worth looking at, and the varied selection here should provide at least two or three for anyone to enjoy.

OUT OF THE SHADOWS

My own un-favourite is this attempt at producing a D&D style game.

The opening screen invites you to restore a saved game, create a new dungeon, create a new hero, or create both. And your hero can be either a human, elf or dwarf, though there are no characteristics to set up other than those you're issued with. You then have a choice of six quests; or of a random quest; or of no quest at all if you just want to have a mooch about. The quests all have grand names like Silmaril, The Island, or Crown and Serpents — and as that sounded like an interesting pub to visit I set off in search of it. It has to be said, though, that all the quests look remarkably similar.

One feature of the display screen is an attempt to simulate real vision. So, your little matchstick man can only see what he'd see in real life; any part of the landscape that's blocked by walls or whatever doesn't appear on the screen till you move to a more suitable position — hence the shadows, out of which various beasties come to attack you. One of the first essential things to do is locate the home of the Merchant, somewhere near your starting point. Here you can buy and sell items, including the food that you'll need to keep on trekking.

There are plenty of spills and spells, as you attempt to slay a

few monsters and boost your experience. If you fancy moving a matchstick man round a matchstick landscape and getting attacked by matchstick rats then this could be just the game for you.

THE MURAL

You are standing by a goat box
in a field full of golden corn.
The goat box has two slots - one
says "HOGS"
and the other "CROWS".
As you wait, vultures begin to
circle overhead.
Can hogs eat crows?
=B

The Mural is certainly a contrast — unless there are now dungeons and dragons in Neasden High Street. This is where you allegedly begin the game, according to the scenario. Having been accosted by two men wearing suspender belts, you're given the task of painting over an obscene mural. Now you have to admit that as adventures go, this is just that bit different!

You awake in a cave with nothing more for company than *The Quill's* gothic character set, but with exits in all directions. Trust me to pick the one which is immediately blocked off by a penguin which drops down and sits there eating a sandwich. Or was it a sandwich eating a Penguin? Whatever it was, I had nothing to try to get past it with, so I entered the cupboard,

warily examined the smelly fur coat and tin of dead maggots, before going north and walking into a lamp post where I was given a message that I'd met the lion and the wardrobe, but no witch yet!

Back at the cave, another exit leads to the obscene mural itself, so in the interests of research, I took a close look. It "shows several nubile elven-maids in some extremely erotic postures while a gorilla in a tutu dances in the background." Shame it's text-only. It sounds just like the YS Christmas party! Interesting as the mural is, the room's a bit plain otherwise, so it's back to the cave and out the other side and off to a small house, where you find a carved cuckoo, a copy of the New Orc Times (ouch!) and a C5 order form quietly mouldering away. Heading off in yet another direction through a field of ripening corn, past the buzzing insects and the hovering vultures, I managed to squeeze myself into a pillar box but couldn't squeeze myself out again. The adventure makes as much sense from in there as it does from anywhere else, so I stayed put and tried to read the small white envelope and puzzle out why I hadn't been able to get the bucket with a hole in it out of the well. Baffled yet? Me too — but I enjoyed it all tremendously just the same.

get out. As it seems to me highly unlikely that most people would get it, I'll give the answer here, but backwards, of course: TIGN INRU TFOD AETS NIEL DNAH DNIW.

With that out of the way I was soon wandering towards the main road, where a dead hedgehog warned me to be careful. It's bad enough being small without being squashed. Keeping to the fields seemed a better bet, and the first simple maze came in the form of a haystack — no prizes for guessing what you can find hidden there. Later on a broken lolly-stick proved its usefulness, though you've no sooner dug your way out of somewhere than you're confronted by a giant mole. Up onto a lawn and you're outside a house, though inside the garden shed there's a swarm of killer wasps that saw me off. Fortunately the RAMSAVE feature helps battle recommence pretty easily.

Microman's a lot of fun, and clever use of *The Illustrator* means that decent graphics pop up fairly regularly.

GALAXIAS

MICROMAN

Released previously as *Project X* — *Micro Man*, this is the tale of Professor Neil Richards (that means you), who's been given a dose of Gamma Radiation that's reduced him to the size of a box of matches. Quite why the shrinking has to occur while he's sitting inside his car I don't know, but it does lead to the first fiendish problem — how to

This final adventure on the *Fourmost* tape is the one that'll probably interest lots of people as it's an early effort from someone who went on to do better things. That someone is Fergus McNeil, the better things are *Bored Of The Rings*, *Robin Of Sherlock* and various quests for various joysticks.

quests for various joysticks. Not that *Galaxias* is in any way bad — it is certainly my favourite in this collection, with lots of style and indicating just how much variety you can coax out of Gilsoft's utilities.

For a futuristic adventure we're presented with a futuristic character set, though I'd have willingly sacrificed it for

YS Adventures

one that I could read. Alongside it goes a futuristic adventure language, too, so that you get responses like 'Confirmed' instead of 'OK', and 'Input not understood.' Your job is to cruise the galaxies and find the lost crystal, but first it helps if you look round the locations near the Spaceport where you begin. Just south of the Metalon Bar you'll find the

Alcohol Reclamation Centre, (the loo!) while further on there's the miniest of mazes — one location!

There are special instructions for when you reach the bridge of the meta-galactic sky cruiser, and these enable you to visit whichever planets are within your reach. Initially there are four of these: Grafton, Terminal, Akrol and Septule.

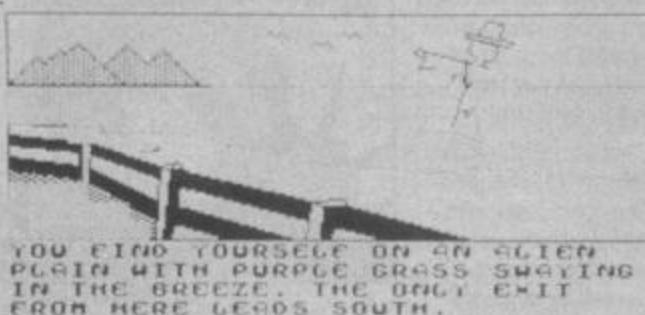

THE EXTRICATOR

I suppose you might call this another QUIP adventure — one written using *The Quill*, *The Illustrator* and *The Patch*. And come to think of it, that's not altogether a bad description for a game that displays a neat line in dry humour. In one location there's a piece of string which you can't GET, so naturally you EXAMINE STRING: "You know perfectly well what a piece of string looks like." Oh well, it was worth a try. Elsewhere you rummage through a pile of rubbish to unearth a letter. We intrepid adventurers are always finding letters, and what's the first thing we do? Right, READ LETTER. "It's not that sort of letter!" What? Examining the object proves that in fact it's a letter 'L' that's dropped off a sign somewhere — though what the 'L' you do with it I haven't yet worked out.

Your task in *The Extricator* as an earth agent for a top security company is to rescue a Professor Roberts from the detention area of the 'Star Fleet Command' headquarters on the Planet Arg. You begin, though, on "an alien plain with purple grass swaying in the breeze." You're wearing a tin hat and staring at a rather tatty scarecrow. Sitting staring at things doesn't normally get you very far in adventures, though this is one where you'll have to look closely at the occasional illustrations, as well as paying attention to the text, if you're to make any progress.

Uncovering a familiar old fissure, I made my way past some not very clean water and into one sector of the complex. On a desk I found a computer, which on closer inspection turned out to be "a ZX Spectrum wearing a Saga keyboard." I had a tape of data with me, and got a code from that which later provided me with a laser gun, and eventually I made it to the red sector.

I doubt if experienced adventurers would take too long to work their way through this, but I think you'd still like some of the problems and smile at their solutions. Beginners though, could find it taxes their ingenuity a good deal. The atmosphere's reasonably convincing, with an attempt to produce more than just the bare location descriptions. And the pricing's about right to provide value for money, especially as the B-side of the cassette contains an impressive tune called *Frantic*.

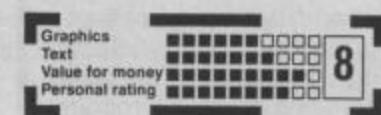

YOU FIND YOURSELF ON AN ALIEN PLAIN WITH PURPLE GRASS SWAYING IN THE BREEZE. THE ONLY EXIT FROM HERE LEADS SOUTH.

Now what?

FAX BOX

Title: *The Extricator*
Publisher: Precision Games, 2 Fern Hills, Langdon Hills, Basildon, Essex SS16 5UE
Price: £2.99 plus 21p if mail order

Graphics are used sparingly but effectively, and the ability to travel between the different planets means there's a lot of variety in the adventure — just as there's plenty of variety in this package. And at £2 an

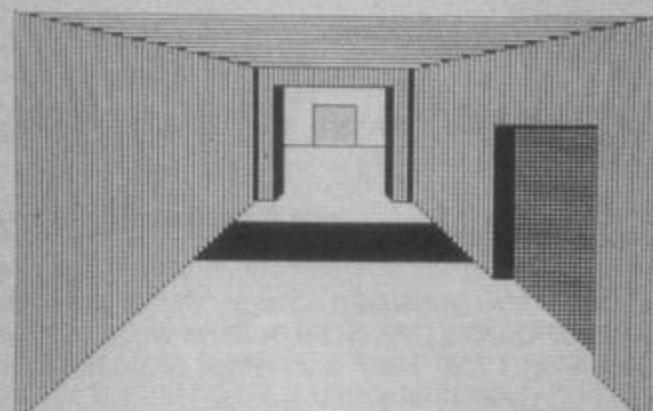

adventure I can't see anyone complaining. Okay nothing stunning, but a nicely thought-out collection of good solid stuff that might otherwise have escaped your attention.

Price: £7.95

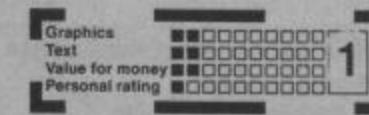

SURVIVAL

Central Solutions seems to have released several tons of budget software recently, including a few hundredweight of Spectrum adventures. All the ones I've seen so far have been written using *The Quill* and *The Illustrator*, but my choice of what to review was dictated by finding one that would load. Never has my volume knob been twiddled so much to so little effect.

Still, the aptly named *Survival* finally went in there, though after all that trouble I really wished it hadn't. Perhaps after introducing *The Patch*, Gilsoft ought to provide a spelling checker for programmers who write 'thaught' for 'thought' and 'screach' for 'screech'. The idea behind this one is that you're MI5 agent Gary Gullible and you must recover some top secret documents believed to be hidden on the island of Master Mud. It's here that you're parachuted at the start of the game.

You begin beside a perimeter fence carrying nothing but a cheese pastry, a crowbar, a stopped watch and a lamp without a plug. Strange things to be carrying when you've just been parachuted into this top priority mission. Bond wouldn't have stood for it! The first painful experience is your encounter with a guard, and this meeting is followed by a *Swords and Sorcery*-type sequence of messages like "He hit me" and "I missed him" which are printed on the screen in a long drawn-out manner. You have no control over this and as the messages and outcome are the same every time your enthusiasm for the adventure soon starts to disappear. My first thought after that was SAVE, which I'd advise you to do, except for the slight problem that the program doesn't recognise the LOAD command. Despite the fact that this is documented, it produces the response "I can't." I tried the usual RESTORE, RESUME, LOAD GAME, LOAD PROG in case the documentation was wrong, but all to no avail. This is doubly annoying when the adventure is jam-packed with sudden deaths that hit you with no warning. Take, for instance, the corridor junction where, upon going NORTH, you're immediately killed by guards who smell your cheese pastry. As each of these sudden deaths means having to go back to the start, you can imagine the fun I've had reviewing this one. *Survival* really was an apt title after all!

Alien Game. At the same time a capsule enters the Earth's atmosphere. It is found to contain a map of the Solar System that shows the position of eight similar capsules on the other eight planets of the galaxy. That's all the info you have. And even that's more than you'll glean from the 'instructions' that come with the game — there won't be any.

So how do you set about saving the Earth from total destruction? First you've got to play *The Alien Game* — here you'll uncover the clues that'll help you open the capsules. But don't expect it to be immediately obvious when you do find a clue. Remember aliens aren't too keen on us humans so they'll do their damndest to make things difficult.

Now you've got some idea of how to open the capsules you'd better track down where they're located. So prepare for blast off — destination: the solar system. Decide which planet you want to visit first, then select the Space Travel option. Your spaceship's computer'll then be given all the information it needs about the planet you've chosen.

Then lift-off into the vast vacuum of space — only to find

it's choc-full of asteroids and meteor storms. But having successfully blasted your way past these you're then ready to land on the planet. Be careful though, you'll need to take all sorts of factors into account — such as the planet's gravity, atmosphere and surface conditions. And that's where all the up-to-the-minute technical info on each of the planets comes in handy. If you thought docking procedure in *Elite* was difficult, try having a go at this! At least the gravity's the same on every Coriolis space station.

If you land correctly you should see a locked capsule bearing an alien inscription. If you've cracked the code that lets you open the capsule, you'll receive part of the solution to the Earth's problems. But you'll need to open all nine capsules before you make sense of the solution. And even then your troubles aren't over — you'll just learn what you've got to do next. It was never like this on the telly. Beam me up Scotty. Kirk out.

THE ALIEN GAME

There's a staggering 43 levels in this puzzle/strategy *Alien Game*. Each grid section represents a level — every time you successfully complete a level you'll gain a piece of information that'll help you open a capsule. To make it even more tricky Martech hasn't included any instructions — you'll just have to work it out for yourself, won't you!

JOURNEY THROUGH SPACE

Did the Earth move for you too? The graphics are amazing and in the final version there may even be animated horses and the like. You're currently on Earth but if you select the Long Range Chart you can move the cursor to the planet of your choice. Looks like we've chosen Neptune as the first port of call.

Once you've reached your destination planet select the landing option and your ship'll start its descent. You'll see a grid appear and you must search until you find the square containing a character representing a capsule. Take care when landing — you must be at a speed of less than 20m/s and you must also take into account the planet's atmosphere and surface conditions.

We've arrived safe and sound on Neptune. If you look carefully you'll see the capsule on the left of the screen — choose the big 'Q' to examine it. Selecting the Sampler option will enable you to get the gen on the planet — you may need this when trying to open the capsule.

Heather Couper, presenter of Channel 4's *The Planets*, talks about her involvement with Martech's new game of the same name.

When did your interest in Astronomy first start?

Oh, when I was very small — about 7 or 8. I looked out of my bedroom window and saw a green shooting star in the sky and it really turned me on.

What do you actually do as an astronomer?

I'm a full-time astronomy broadcaster and writer. I've written 14 books and presented three television series — the most recent one being *The Planets*, of course.

How did you get involved in *The Planets* game?

I was in a plane on my way to Italy when my producer told me that Martech wanted me to get involved in the production of its new game, *The Planets*. I was very excited by the proposal because the game is very different from the series and very hi-tech.

How accurate is *The Planets* game?

Very accurate. You can find out loads of detail about each planet like gravity and distance from the Earth. And you can use this information when playing the game.

Are you involved in any other computer games?

Well, I did get involved with *Starfinder* for the BBC but I shouldn't really say that, should I? Can you tell us a bit more about the latest info on Uranus?

People are very surprised by the latest finding on Uranus. There are 15 moons and we expected them to be barren because they're so far from the Sun. The surfaces of these moons are full of swirls and this means the cores have at some point been warm and active. The big question now is, how? Uranus is over two billion miles from the sun so it couldn't have been the heat from that. This up-to-date info has even been included in the game.

Do people recognise you now you've been on TV such a lot?

Yes. Absolutely. Especially girls of about 14 or 15 — I can't think why.

Do you have a home computer?

Yes a BBC. Ooops.

Does it annoy you when people call you an Astrologer?

Yes it does. I get very angry because the two subjects are totally different.

Do you believe in Astrology?

No way!

Have you been dubbed the female Patrick Moore?

Yes, and no. A lot of people do say I'm a female Patrick Moore but it's obviously rubbish 'cos I'm half his size. Apart from that we're also totally different. Patrick's a sensational amateur Astronomer whereas I was trained as a Astrophysicist and can therefore impart the hard facts about the physics of the solar system.

O'LEVELS

not just revision but also tuition
for the Spectrum 48K

Mathematics

8 programs TOTAL 150K

Fractions, square roots, decimals, logarithms, areas, sets, accuracy, bases, interest, volumes, indices, standard form, modulo, number set, pie charts, histograms, simultaneous equations, bar charts, averages, probability, algebraic laws, quadratics, matrices, vectors, transformational geometry, trigonometry, differentiation, integration, factors, angles.

Physics

7 programs TOTAL 140K

Reflection, wavelength and frequency, refraction, lenses, the eye and its defects, diffraction, colour, magnetism, motors, Ohm's law, amps, volts, series, parallel, electronics, heat, gas laws, energy forms, specific heat, kinetic energy, half-lives, atomic structure, radiation, isotopes, Newton's laws.

Biology

6 programs TOTAL 120K

Plant and animal cells, genetics, inheritance, reproduction in man, asexual and sexual reproduction, flowering plants, photosynthesis, osmosis, transpiration, transport, bacteria, food classes, diet, alimentary canal, respiration, excretion, eye, skin, nervous system, ecosystem, food cycles, fungi, earthworm, amphibians, birds, mammals, response.

Computer Studies

7 programs TOTAL 140K

Data collection, coding, storage, processing, presentation, validation, d.p. systems, privacy, security, hardware, I/O devices, software, low and high level languages, machine-code, assemblers, interpreters, compilers, errors in programming, aids to debugging, microcode, machine organisation.

Chemistry

8 programs TOTAL 150K

Matter states, action of heat and electricity, reaction with air, water, acids, alkalis, halogens, oxygen, sulphur, nitrogen, phosphorus, carbon, hydrogen, alkali metals, alkaline earth metals, transition metals, organic chemistry, atoms, formulae, molar mass, equations, ions, periodic table, bonding, gases, metal extraction, polymers, fertilizers.

French

8 programs TOTAL 160K

Regular and irregular verbs, reflexives, indicative, subjective, passive, infinitive, agreement, pronouns, definite, indefinite and partitive articles, single and compound nouns, adjectives and their forms, adverb phrases, comparatives and superlatives, conjunctions, prepositions, idioms, measurements.

Electronics

8 programs TOTAL 150K

Energy and its sources, power distribution, e.m.f., p.d., charge, current power, r.m.s. values, resistors, series and parallel, capacitors, time constants, inductors, transformers, resonance, microphones, loudspeakers, heat and light sensitive devices, diodes, transistors, logic circuits, multivibrators, meters, CRO, amplifiers, feedback.

Technical Drawing

A set of animated tutorials showing isometric projections, the construction of cylinders, cones and other projections.

ALSO AVAILABLE

Maths Sprint

A fast exciting game for 1 or 2 players. Random questions covering 18 topics. Advance with correct answers and beat your previous time. Suitable for O' level students.

Principles of Computing

Part I takes you through binary counting in easy stages with exercises showing the use of 8 bit byte, character formation and the display file. Part II deals with theory and the use of the higher 8 bit byte, the 16 bit word, number conversion and Z80 registers.

EACH SUBJECT ONLY £5.00 INC P&P

PASCAL & C

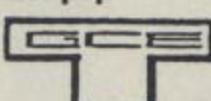

Teaching versions of these languages, including a full text editor (screen editor) and a tutorial manual. Saving and loading of programs is a screen editor function. Trace facilities are provided for easy tuition and debugging. Availability: Pascal now, C now, Logo soon, Forth soon.

1 program Each 30K

each language only £5.00 inc. p/p

INCREDIBLE!

TRANSFER ANY PROGRAM TO MICRODRIVE CARTRIDGE
THE FULL POTENTIAL OF YOUR MICRODRIVE
CAN BE REALISED WITH THE

MIRAGE MICRODRIVER

NOW WITH EVEN MORE EXCITING FEATURES AND STILL

ONLY £39.95 inc P&P

Features:

- * NEW even faster loading from cartridge.
- * NEW optional saving of screen display.
- * NEW copy function for screen dumps to ZX printer.
- * NEW dump function for program hacking.
- * Consists of hardware only, no additional software required.
- * Transfers any program to Microdrive in one simple operation.
- * Extremely easy to use.
- * Freeze any game at any point, save it, and restore it later.
- * Compacts program for efficient use of cartridge.
- * Through connector for other peripherals.
- * "Poke" facility for infinite lives, etc.
- * Also saves to cassette.

"If you have a microdrive the Microdriver is the most important piece of hardware you could buy." John Lambert - Sinclair User
"Using the Mirage is a dream... this device is a must for the serious microdriver." Crash Magazine - August

"I much preferred the Microdriver for speed and ease of use." Iolo Davidson - Your Spectrum

UPGRADE SERVICE: We will upgrade your existing Microdriver. Simply return the unit to us with a cheque for £5.95 and we will fit the latest version ROM.

Note: This unit is intended for software owners to transfer programs on to microdrive cartridges for speed and ease of access. Programs saved using the Mirage Microdriver are unreadable unless the Microdriver is present.

Now available from your local computer store or in case of difficulty order directly from us:

COMPETITION

YS Makes it Biggles!

Chocks away chaps 'cos we're off with Biggles and his chums to win a model Sopwith Camel, five Tiger Moths and 25 copies of Biggles, Mirrorsoft's ace new game.

Illustration/Paul Shorrock

Biggs was in the breakfast room of his Mount Street flat. In between mouthfuls of toast and tea he slowly digested the contents of a newspaper in front of him. Bleurgh! Algy and Ginger, his two closest chums, came bounding in panting slightly and looking very red in the face. "Morning Biggles, old chap," they chortled in unison. "A fine time to roll down to brekkers, I must say," grunted Biggles. "Cripes, we have blotted our copy books," sniggered Ginger.

"Looks like we're in a bit of a jam," said Biggles. "Rather have marmalade

myself," wheezed Ginger. "Oh buck up Ginger this is serious stuff," jerked Biggles. "What ho! Out with it Biglet; there's something in the wind," grimaced Algy. "Only last night's curry," sniggered Ginger. Biggles pursed his lips and looked Algy and Ginger squarely in the face. "Have you two seen the front page of *The Daily Male?*" inquired Biggles, passing them the rag. "Cripes, it's a picture of us," guffawed Ginger, "Remember that particular scrape, eh chaps?"...

Have a look at the cartoon — what do you think they're up to now? If you can think of a witty picture caption you're

in with a chance to win a fabulous prize in our whizzo Biggles compo. And crumbs have we got some spiffing prizes — Mirrorsoft is offering a fantastic Sopwith Camel model aircraft to the winner and five second prizes of a Matchbox Tiger Moth. And that's not all — the 25 runners-up will each get a copy of *Biggles*, the computer game that's based on the film. Top hole, eh?

All you've got to do is fill in the caption in less than 12 words, add your name and address and send the whole caboodle, or a photocopy, to Biggles Compo, YS, 14 Rathbone Place, London W1P 1DE.

What a jolly wheeze! Here's my wacky caption

Name Address

Rules

Chaps who work for Sportscene Specialist Press and The Mirror Group are not allowed to enter. Bouncing Czechs included. Your luck will run out if you try to enter after May 31st. Unless, of course, you're one of the old school. The Ed'll ask you to come outside if you try and argue with him 'cos he's a real bounder, cad and rotter.

WARNING
These pages contain
explicit QL reviews and
may offend sensitive
Spectrum users.

NEWS & REVIEWS

Alright, you asked for it ... now you're gonna get it — regular coverage of everything QL. Max Phillips dusts down his machine ...

Open wide and say aaah. Umm, I've had this QL for a while haven't I? No matter, YS has got a lot of catching up to do on the surprising world of the QL. We're starting with the reviews here but we'll be doing hints'n'tips, letters and listings as soon as poss. But first, as they say, here is the news...

- Is there a language the QL can't run? QL/APL is now available for £99.95 from MicroAPL on 01-622 0395. If you know APL, you should know that this'll go on an unexpanded QL and comes in either keyword or squiggle versions. MicroAPL is well chuffed with it, "It's better than some of our £2000 Supermicro versions". Wow! And if you've never heard of it, it's a concise and powerful maths-based language. Past experience says they will be delighted to tell you more but be warned ... if you've never seen a complete statistics package written in one line of program, you won't believe a word of it!
- **Digital Precision's Supercharge SuperBasic compiler continues its run away success and is now in use at several well-known QL software houses, turning out commercial products. There's been less success for a nasty Belgian type turning out fake copies. The blister-packed fakes don't actually work. And the program detects that the Lenslok code has been removed so that any programs which you do manage to compile with it frequently stop with a "Pirated Supercharge" message!**
- Talking of Lenslok, Supercharge's producers point out that Firebird's Elite for the Speccy has given the system an unfair reputation — apparently the reason it's so impossible is that the wrong scrambling routine crept into the original release! I always wondered why it was easier to guess than use the lens...
- Beginners looking for a break could do well to contact Breakthrough Software at 17 Shaftesbury Way, Royston, Herts SG8 9DE. Among usual things like a £6.50 print-spooler and a free screen dump with all purchases, Breakthrough has an on-line SuperBasic manual for a mere £8.50 (this is the stuff). When you come across a problem, hit F1 and the On-Line Manual pops-up with complete help on SuperBasic, without wrecking the current display. You can even create your own help screens with Quill. Come to think of it, why should this be limited to beginners?
- On the games side, Leisure Genius's fiendish Scrabble for the Spectrum has made it across to the QL. It costs £14.95 and brings with it new extras like a clock and a much enhanced dictionary. Give 'em a ring on 01-935 4662 if you reckon it won't make mincemeat out of you. Genius also has the rights to Monopoly and Cluedo but is holding fire to see how Scrabble goes. Don't wait too long guys ... Digital Precision is talking about a familiar-sounding game with the QL playing a very intelligent opponent! And still no word on Microdeal's great new adventure with arcade bits.
- And finally, the bit at the end that reminds you we can't do without your help. We need your ideas, hints, problems, news and new products ... even if you just write and tell us what you do with your QL, what add-ons you have and what you'd like to see in the mag. You could even send in some program listings ... the Ed's gonna have to get used to this!
- **Write to: QL News, YS, 14 Rathbone Place, London W1P 1DE.**

KEYDEFINE . . . Key

Secrets!

Psientific produces KeyDefine, a general purpose key definer with some helpful extras. You can either keep the program in memory (if you've room) and redefine keys as you go along or you can create small stand-alone key programs which you EXEC at the start of a session. You can store up to 2048 characters on up to 41 keys. Just press Alt and another key and that key's characters are typed out for you. So for example, you can reprogram Quill's keyboard to suit your taste or have complete routines run at the touch of a key in SuperBasic. Pressing Alt and Enter will recall the last line entered — a godsend for SuperBasic! The only hassle comes if the program you're running wants the Alt key for itself (such as Hisoft's screen editor). Perhaps a new release could let you define a key of your choice as the call-up key!

You also get *Dir-Help*, a multi-tasking job which will open a real window, let you do directories of either microdrive, list all the jobs in the machine, view your own help file or spool-print to a printer or microdrive. Using the print-spooler lets you instantly get back to work while *Dir-Help* does the printing for you. Finally, there's one of those useful fast cartridge copy programs on the tape. At its price it packs in a lot of stuff and makes using the QL a lot quicker and more enjoyable.

QL MACRO ASSEMBLER . . . Bru

The official Sinclair assembler is produced by GST, the people who nearly bought you QDOS. It's a big, capable, unfriendly thing, crudely adapted to run on the QL and consists of a full-spec 68000 macro-assembler, the you-know-who grotty screen editor and a linker. These are run separately, although you can run the assembler and linker directly from SuperBasic if you have Sinclair's *QL Toolkit*. Still, it's possible to balance both the editor and assembler in memory on a 128K system if your source code is quite small.

But the lack of luxuries is no problem when you consider how good the assembler itself is. As well as a comprehensive set of directives and superb expression evaluation, it can generate either absolute code to be run directly with EXEC or relocatable code that can be glued to previously assembled modules (or even compiled high-level programs) using the linker. The macro facility is very complete and the package includes a library of useful macros, such as IF, FOR, CASE and so on. Using these and your own macros can make machine code almost as painless as SuperBasic. The only disappointment is that conditional assembly is only provided inside macros . . . what happened to an IF . . . ENDIF directive?

PARAGON... of virtue!

Eigen Software's first QL release is the stunning *Paragon*. Once loaded, you can call up 10 different functions at any time which work in genuine windows. You can reposition them and they don't mess up the screen when you finish with them. Any similarity to Borland *Sidekick* on the IBM PC is purely intentional!

Paragon needs 22K to get going so you can't use it with big programs like the Psion packages on an unexpanded QL but it works fine for assemblers, Superbasic and the like. Our pre-

release version has a fair number of bugs but the final version should be out by now. And Eigen cuts corners with the skimpy manual — it comes on a *Quill* file not on paper! Even so, it's an impressive program. Get one to impress your friends... plus you'll probably find it dead useful!

FAX BOX

Title *Paragon*
Publisher Eigen Software
Price £19.95

● Press Alt-F1 (and sometimes Enter) to call up *Paragon's* menu.

This is an ordinary four-function calculator.

The Technical calculator has everything you'd expect plus trig functions, logs, roots, powers, reciprocals, factorials, up to 8 nested parentheses, arithmetic on memory, X-Y swap and so on. And a statistics mode for mean, standard deviation, variance and so on. And a programmer's mode with hex-dec-bin conversion and 68000-style arithmetic and logical operators. Worth the price alone!

Do screen dumps on any Epson FX80 compatible printer. Choose inverse or normal dump and use the crosshairs to select any part or all of the screen.

On-screen notepads can be really useful. Sadly, this one lacks proper editing and inserting and won't save the notes you write on it. There's up to 8 pages to go though.

Choose this and *Paragon* will switch the screen off if you've not touched the QL for around three minutes. Saves wear'n'tear on the monitor. (*Specy* users — see Andy Pennell's program in the last issue!)

This reports free memory between the top of the heap and SuperBasic... it might be misleading because the heap sometimes has holes in it, if you see what I mean.

Leave this on screen while you work and you can tell whether the caps lock is on or... nice one!

Of course it's got a clock! It's even got an alarm facility to buzz you at a preset time.

Days and dates from 1961 to 2028. Will YS still need me when I'm 64?

Yep, it's an ASCII table. Well, there's one in Sidekick.

WINDOWS/ICONS

FONTS... the real thing!

When you write a program like *Paragon*, you're sure to end up with a lot of useful little routines. Like genuine window code, icon and font designers and driving software. Eigen has bundled them all up and interfaced them to SuperBasic to let you use them in your own programs. *Window/Icons/Fonts* gives you eleven new Basic keywords plus two simple editors to design your own fonts and icons and yet another freebie screen dump. Hardly fab'n'gear but great fun.

FAX BOX

Title *Windows/Icons/Fonts*
Publisher Eigen Software
Price £9.95

R WINDOWS... great minds

Much the same thinking has been going on at Psientific software whose *Q-Calc* calculator looks a bit out-of-date compared to *Paragon* although it's half the price and can be used with the Psion programs in 128K. But the code behind it now pops up in *R-Windows*, a package that gives you real windows with eight new SuperBasic keywords. Like all Psientific programs, it's got a proper printed booklet and you can buy the source code for another £9.95 — can't be bad!

DEVPAC QL... Better than Ever

Devpac's got a reputation as the top *Specy* development system though, like most of the people I know, I actually use something else. The QL version is in a different league — and that's got nothing to do with the fact it's programmed by YS's own Andy Pennell!

The editor and assembler are combined so that you can assemble your code simply by hitting alt-A. It's a pleasant screen editor controlled using Alt keys and even has a help screen... the only drawback being the odd bug and the failure (like the GST editor) to highlight a marked block of text — pull your socks up Pennell! The assembler is pretty comprehensive... full arithmetic, conditional assembly, a proper macro facility plus all the usual directives. Output is an EXECable binary file... there's no linker so long programs have to be done by complete assembly with INCLUDE files. But the only thing that actually upsets me is that it automatically assumes PC-relative in relative instructions and sometimes you have to explicitly tell it not to. I'm sure it's trying to be helpful but I'm a Humpty-Dumpty programmer and instructions mean exactly what I say they mean!

Devpac's debugger is *HiSoft's* superb *MONQL*, with its single-step, breakpoints, front-panel display, disassembler and so on. It even looks-

up QDOS function names and error messages for you so that you can see instantly what your program is doing. Six new SuperBasic commands are added, allowing you to list current jobs and break into them.

HiSoft has an excellent upgrade policy so the few teeny bugs shouldn't worry you and the package is even available on EPROM. An excellent choice if you're just starting out or have an unexpanded machine... and one you won't outgrow in a hurry!

MORE SCREEN SHOTS ON PAGE 29

ARC OF YESOD

Thor Computer Software/£8.95

Max Doooring! He got the motion, he got the action, man, the boy can play. *Arc's* just the thing for all those who've got a cold in the nodes. It's the Rt. Hon. Charlemagne Fotheringham-Grunes back in his somersaulting splendour, bouncing through Thor's beautifully detailed flicker-free graphics, collecting crystals and generally dealing with one of those teleporting alien monoliths that frequent films like *2010*.

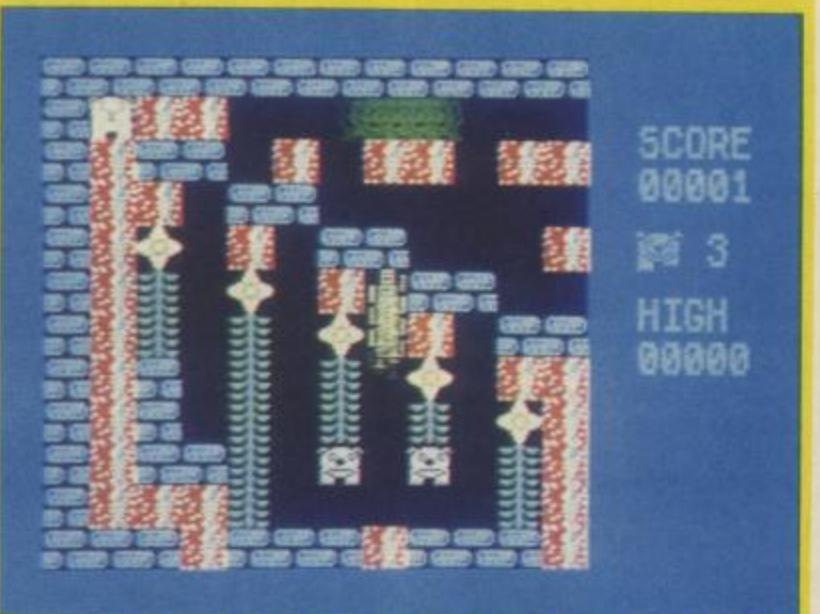

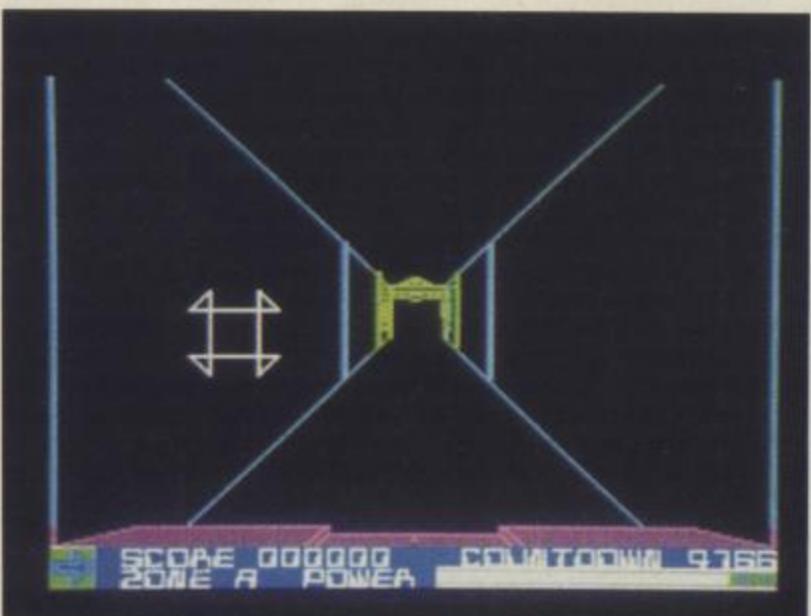

Things haven't changed much since *Nodes Of Yesod* — it's still the split pixel, platform-leaping, nasty-avoiding bizarre that makes you think that there's lots of life left in the platform game. If you've got *Nodes*, the only reason to buy this is if you like it so much that you want to carry on in a slightly different variation. If you missed out on the original, you're missing out on one heck of a game.

Personally, I'm completely hopeless at both games. I can't make head nor tail of the wacky inlay card (who do these guys think they are — Ultimate?) and I keep falling into the same inescapable room with awful regularity. But winning has nothing to do with it ... I just love the way Charlie moves and am quite happy to sit there jumping up and down till my lives run out. Fab'n'gear ... get into this *Arc* next time it starts raining!

VECTRON

DOGSBODY

Bug Byte/£2

Rick To be read in Husky tones. It's a dog's life working for *Your Sinclair*. The Ed just keeps giving me all these dog rough games and telling me to get my teeth stuck into as many puns as possible on 'dog' and 'byte' — but unless you're a rabid mazer the only word I can think of that has anything to do with dogs and this game is unprintable.

You know how pooches are meant to like digging holes, well Dogsbody goes a hole lot deeper. He's a special agent for the Animal Liberation Front whose task it is to rescue 192 pups from the dastardly Dr. Dogmush. Fifty meanies, the robot guards, are on his tail. Being an ideologically right-on Rover, he can only use flower power. Dig above a plant and it'll grow to cut off the meanies access. Or burrow beneath rocks that'll marmalize them. The baddies get re-incarnated, but the little doggie only has three lives — far better to be a cat!

It won't take you a million years to poodle round this maze game. The meanies move in most unmysterious ways across the 25 screens (though it's fun when they all go yellow and run away) so it won't take long to work out the best way to tunnel out the pups. A mongrel of a game derived from a mass of others, the main obstacle is actually not to corner yourself between the flourishing fauna.

This game should be given to your nearest Pal or Chum.

Graphics	Playability	Value for Money	Addictiveness
			4

Firebird/£7.95

Luke The more attentive of you may be experiencing a touch of déjà vu as you read this... that's because *Vectron* was first launched by Insight and was checked out in the first issue of *YS*.

For those who've forgotten the tale, your ship is trapped in the subspatial dimensions of a computer and, using your UD Cannon and shields, you have to search out the exit to a maze. Only then the trouble really begins!

Up on-screen, you have it — 'Destroy all enemy craft'. Not exactly the most comprehensive instructions I've ever seen, but the phrase does seem to cover all the angles. Indeed, once you're playing the game — directing the cross-hairs of your UD Cannon around the 3D maze at 90mph! — it's difficult to remember even to fire at the enemy as you try

desperately to manoeuvre round a corner without ending up as a nasty stain on the wall.

The screen has the usual array of control panels but things go so fast that it's best to keep your eyes glued to the action. More useful is the maze map that can be superimposed over the view out of your craft — at least then you've some idea of what's coming up around the corner!

Overall, a pretty good game and one guaranteed to keep your attention. The graphics are good and fast, and the 3D effects are pretty realistic. My only criticism is that the game might be a little too difficult for casual arcade players — but who's going to admit to being one of them?

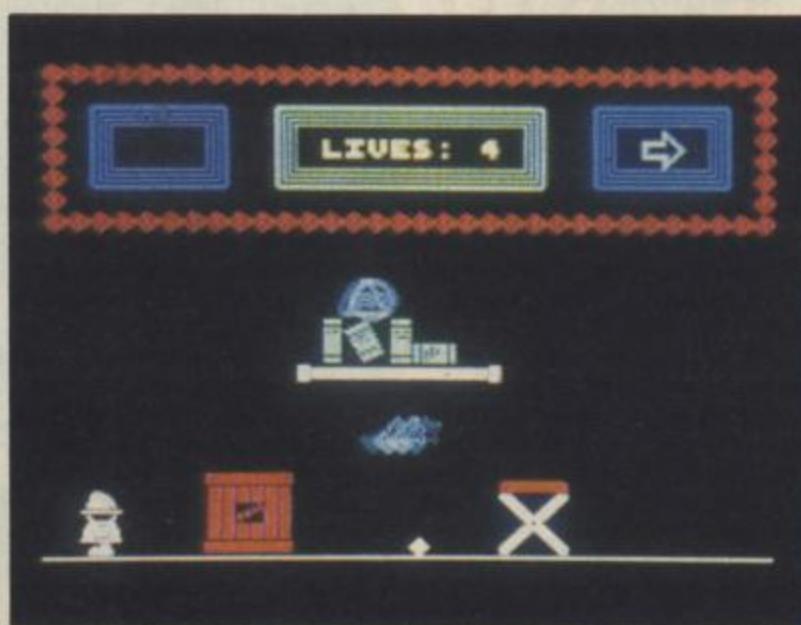

Graphics	Playability	Value for Money	Addictiveness
			7

THE INCREDIBLE SHRINKING FIREMAN

Mastertronic/£1.99

Rick The fireman hero featured in Mastertronic's latest, is not Hissing but Shuffling Sid. And you'd be shuffling too if, like Sid, you'd been shrunk in a shrinking plant fire. Being only half the man he used to be (bit like the Ed really) and only on half pay (like me), it's your job to find the stretching rack that'll return Sid to normal.

A silly scenario, true, but it's one arcade adventure that's offensive to nobody unless you're a dwarf! Although a cheapo, it's got nowt taken out when it comes to the basics of a satisfying game. Sure, it'd be better to know how much energy the nasties knock from you on contact, and, okay, his leaping about is a most peculiar movement — but this is Shuffling Sid after all.

Otherwise the graphics are cute, Sid cuddly and the thinking behind the game fairly thorough. The objects you need to collect to open doors are not always the most obvious — maybe the very fat mouse is of more use than the axe! Most access to the different rooms is up and down fireman's poles (yup, it's a multi-screened maze), but with the right objects on you, short cuts can be bounced through ceilings.

It's not as easy as it always looks, this fulsome family fun, and if you pass this over 'cos you think it's a cheapie, then that'll be your loss, — this Sid's not for hissing or missing.

Graphics	Playability	Value for Money	Addictiveness
7			

Mastertronic/£1.99

Rick Here's a rocket for your pocket from Mastertronic, a sort of space age Band Aid. Earth has finally run out of food and instead of using trad means like genocide to solve the problem, we're sending out space pilots to filch the food from alien transporters. Trouble is they've all been squelched and it's up to you to fly the firmament and feed the world. The more grub you get (and aliens you zap, of course) the further up the astral plane of promotion you'll move, from rookie to the ultimate accolade of hero!

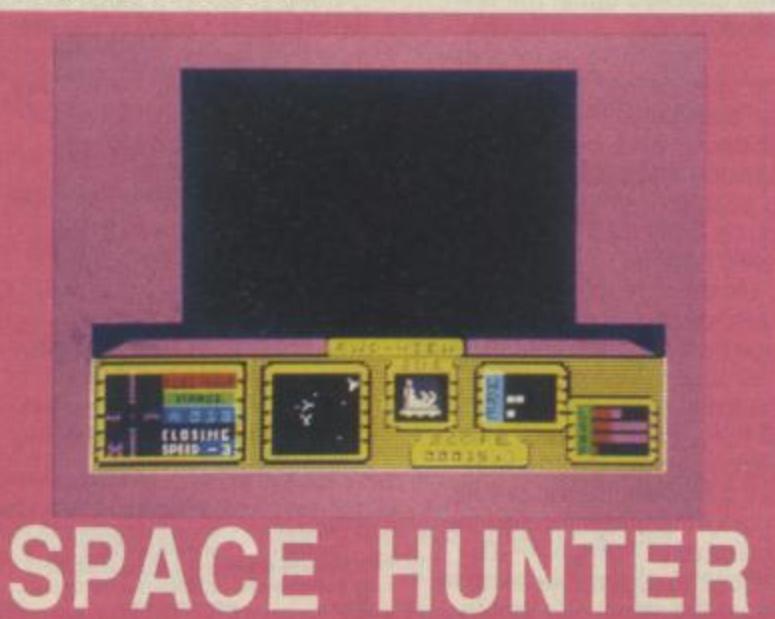

Your first task is to set your approach speed and seek out a target from one of the three types of alien ship. Then plot your course across the star map, keeping a close check on your fore and aft viewers and astral compass. Readings are given for system status (shields, ammo, fuel) and player manifest (warp drive, robo bike, equipment). Warp drive'll get you out of a star

system (and trouble) but is heavy on the galactic gasoline.

Get this all sussed (phew! not easy!) and you board your target. Jet pack propelled (inertia effect'n'all) you can now search for stores supplies and flashing food aboard the ship — but beware, she's heavily protected inside too. A mini-maze ensues, and I think you'll be mega-amazed at the features squeezed into this package.

With eleven ranks to be achieved and fifteen star systems to be explored this game's worth the money for sheer longevity. But it's far more than a cosmic maze or alien shoot'em up. To call it a cut down version of *Elite* is a complement to both. But *Space Hunter* isn't just a cheap imitation — it's a valid game in its own right. A wonder at £1.99.

Graphics	Playability	Value for Money	Addictiveness
8			

SPACE HUNTER

QL QUBOIDS

Sinclair/£9.95

Max Panic stations ... literally 'cos this is a version of the old *Panic* arcade game that's not for the squeamish. You play the driller killer in this plats'n'ladders thriller ... digging holes in the platforms, luring the monsters into them and then ... bam, bam, bam, bam, bam — drillin'em right through the head. Sick!

Yes, forget the fact that the keyboard controls are sticky and that getting on and off the ladders is really fiddly — wait until you slice up your first hapless Nebulon. All the time, you've got to keep knocking back the hamburgers and oxygen just to stay alive — just like working for *YS* in fact. But don't lose your nerve and take mercy on a trapped meanie — leave 'em in the holes long enough and they turn into fastier nastier beings altogether. Dealing with Gastroids, Bipods and the dreaded Quboids is much harder because you need to drop them through several platforms at one go to be rid of them.

The graphics are okay, the sound a little timid but the game is all go and there's plenty of levels to bore your way through even if more than four types of monster would've been a great help. Hardly the most original of games but a real screamer once you get the bit firmly stuck between their teeth.

Graphics	Playability	Value for Money	Addictiveness
8			

ROBOTO

Bug Byte/£2.95

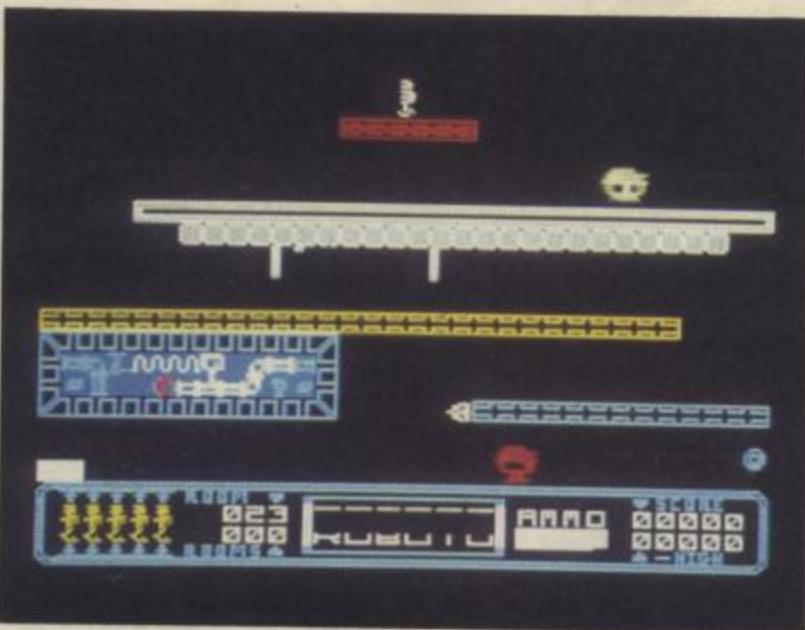

Gwyn Here's a topical little game in the light of recent Sellafield mishaps. It all concerns the last remaining power station, in the year 2086, which is running wild. It's up to you to create a robot to venture into the complex and deactivate each of the fifty-one zones.

It should come as little surprise to find that behind this plot lies another platforms game, but without the ladders. Your five droids can either sink down a level or move faster with a twitch of the joystick. There's the usual selection of rampaging robots shooting at you and a maze of exits linking the sections — and as some are part of one way systems it all takes a bit of mapping.

Nothing revolutionary then, but timing of the robots and the sliding doors is perfect so that each screen will take some time to master. Everything a budget game should be.

FALKLANDS 82

PSS/£7.95

Rachael This is the sort of game that gets a lot of flak from people who see it as nothing more than exploitative bad taste. In fact, *Falklands 82* is a serious wargame and its intentions are undoubtedly honourable, which only raises the question of why a simulation of contemporary history is considered tasteless when a simulation of the mud and blood of the Somme isn't.

You play the British, against an Argentinian micro, in a strategy game that concentrates on land activity. But the task force is still an important factor as it supplies both reinforcements and the aircraft carriers, Hermes and Invincible. You start the game

by allocating fifteen ships between the task force's protective screen and land gunning. Then it's to a map of the island and a decision which of four landing spots you'll choose as your beach head — it's wise to bring in the SAS or SBS to provide intelligence as they can reconnoitre a five sector radius without committing you to a major landing.

After that it's a question of occupying, or being the last to occupy, the ten tiny towns of those windswept rocks. And though you can have a crack at landing at Port Stanley, the concentration of Argentinian troops is likely to make it your final objective. Unless you use the Recce option carefully, the

first you'll know of the Argentinians is when you bump into them, though at turn twenty any remaining pockets of resistance will be revealed. The shape of the island presents problems of bottlenecks forming, and you'll need to plan carefully for terrain, particularly if you're to have the long range gunning of the artillery. Fog and rough conditions can rob you of air and sea support, but if they're fit for you they'll also be fit for the Argentinians. In that case you hope your Harriers can see them off.

And that's it in a nutshell. With its single key entries, using initials for the options, it plays smoothly, though what seems like a large amount of

Basic means annoyingly slow responses at times. The instructions claim that the British are white and the Argentinians black when in fact the Brits are blue and the Argies red and yellow — and to confuse things further British units under command flash red and yellow too. Though it's done away with grid references it still plays rather 'blockily'. In its favour, though, it has five levels, the easiest of which is a good learning mode and the simplicity and relatively small scale of the game could make it ideal for newcomers.

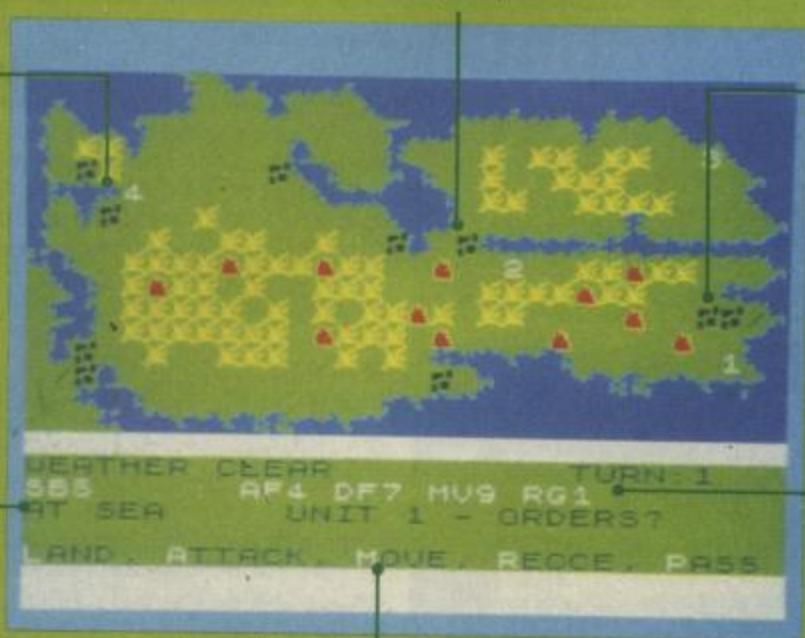

Graphics
Playability
Value for Money
Addictiveness

8

Hush — here's the Special Boat Squadron, landed at Uranie Bay on the Berkley Sound for a quick look around. You know where those Argies are now but you'll also have to find a way to keep them alive.

Next stop on our tour of the historic Falklands is San Carlos Bay, the historical landing stage. Will you choose it? There's a long yomp ahead and a lot of ground to clear first.

General news appears here. Not 'Our Heroic Lads Blast Argies' but what's happening at sea and incoming plane raids, plus Yes/No questions about air and gun support.

"Where's Port Stanley?" "I don't know, Ollie." It's here, and as the capital is likely to be strongly defended you'll need to keep strength in reserve and make sure you can get your guns in range.

Here's the unit under control with its stats: Aggression Factor is attack strength, DF Defence ditto and both are used to calculate combat, while MV is Movement allowance and RG Range — most units have to be next to each other.

Here are the standard options for your forces, Land is only necessary for the initial beach head — no two pronged attacks — while Recce is for SBS and SAS only. Move leads to a separate N/S/E/W menu and Pass is for those who prefer Master-mined (boom, boom)!

F.A. CUP FOOTBALL

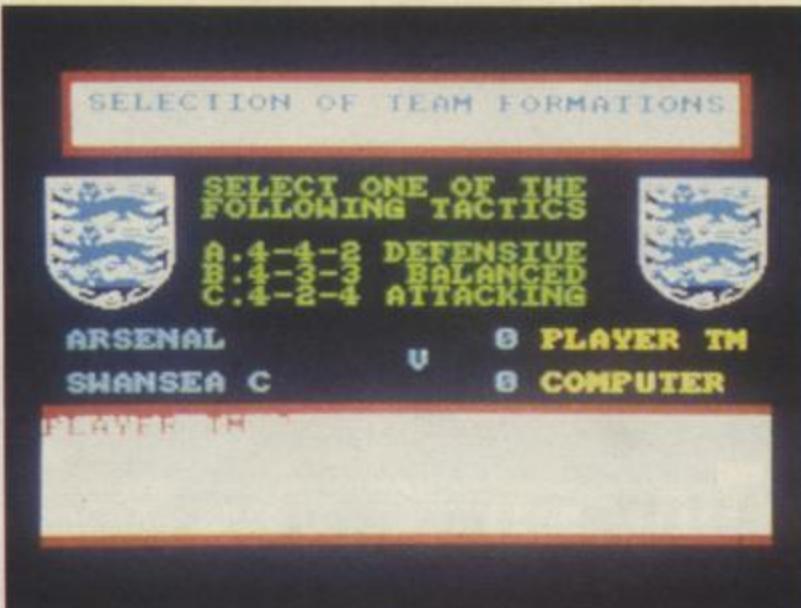

Virgin/£7.95

Rick When the Ed heard Virgin's F.A. Cup Football was the first Football Association endorsed soccer game and that Tony Williams, editor of the F.A. League Club Directory was writing it, he knew experts were needed to review it. Tough, you got me instead. Off he sent me to find 'added realism'. The Royal Box at Wembley, I dreamed. Oh no, he poured iced water down me wellies, gave me half a can of flat Skol and made me watch this game over the shoulder of a six foot seven Arsenal fan

through a Rediffusion window. The glamour just never stops.

In many respects this text based simulation with a touch of strategy is the most accurate of football games on the market. It attempts to recreate the splendours of a complete F.A. Cup campaign. With an up to eight player facility it's a full family game. Each player can choose ten teams to manage, picked from the 92 league teams plus 32 non-leaguers, or you can program in a personal favourite.

At each round a draw is made but there are no rattling balls in a black bag, just a

scrolling screen. If you want to leap (as all but the most manic Runcorn fans will) to the third round where top division clubs enter, then you can. Before each game in the first three rounds you can choose your basic tactic — defensive, balanced or attacking. In round four you can modify this at half time.

From round five you'll be asked an increasing number of managerial questions. Some are silly and rude (do you let your Nigerian winger see his witch doctor!!) to the crucial and practical (how do you re-motivate your penalty taker?). You also have the option to look at news flashes that might affect the morale of your team. At this stage you also get extra chances to change your strategy depending on the state of play.

The glory of the F.A. Cup though is unpredictability. And this simulation tries so hard to be accurate it ends up with the anonymous appeal of watching the pools panel sit. The F.A. Cup, thank God, is not programmed to the dictates of Don Howe. True there are little

ripples of shock — Runcorn beat Wimbledon, Liverpool and Arsenal get involved in an unlikely eight goal shoot out — but nothing that's gonna make Saint And Greaves take up tiddlywinks. This game's statistical background — who's done best in the last ten years — is severely weighted toward the big four — Everton, Spurs, Liverpool and (spit) Manchester Utd. I'd have relished a little more managerial control to make me feel thoroughly involved as the minutes ticked by — the only action ever seen on the screen.

For sheer variety the Rothman's World Cup is a better bet, but this walks all over Bryan Robson's Football Manager (which is something I'd like to do). I refuse to knock this game. As someone who flew half way round the world to watch the Cup Final last year I've taken great joy in managing Everton to three successive Cup victories. Eat yer heart out Big Ron.

SODOV THE SORCERER

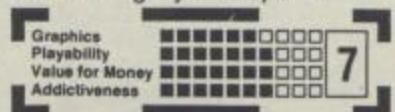

Bug Byte/£2.95

Rick Who remembers Mickey Mouse as the Sorcerer's Apprentice in *Fantasia*? Other than the Ed, go on, put your hands up? Well, it seems nothing's changed much. Wizards are still feisty so and sos and apprentices lazy lads likely to be laid off (or laid out) at a moment's notice. Of course, the world of Disney innocence is now long gone. Bug Byte's sorcerer is charmingly named Sodov and his three apprentices are all on YOPs courses.

But despite this humourous nod to the present, this game's as old as, if not the hills, then at least the earliest sword and sorcery arcades. The wizard defends the castle ramparts whilst his proteges toil and trouble in the courtyard. Dragons attempt to swamp the castle but you can zap them with a shouted spell (mmm, now I wonder what that could be, — is there a clue in the Wizard's name?). The spell turns the dinos into dosh, but at great expense to your energy — which can only be replenished by shouting another spell at the star over the tower.

Miss the dragons though and they'll make yum-yums of your YOPs — and if you don't pick up the cash pretty slick, then an ostrich will. So there is a (marginal if not magical) touch of strategy — you'll have to make a decision as to when you whizz out of the castle — or do you stay and protect your apprentices.

Sounds familiar? — you bet. But while Bug Byte keeps the emphasis on the cheap and cheerful rather than pretentious and pricey then I won't hear a word against them.

BACK ISSUES

The fab foursome of *Your Sinclair* back issues are up for grabs!

Our bumper first issue includes:

Games: Commando • Saboteur • Rasputin • Winter Sports.
Features: Droid Wars • Eight Page Program Power Pull Out • David Crane Interview.

Issue two contains:

Games: The Young Ones • Bladerunner • Three Weeks In Paradise • Beach Head II.
Features: MacLone • Joysticks — Ten Best Best • Matthew Smith Interview.

Our mega third issue contains:

Games: • V • Movie • Zoids
Features: • Switcha • Art Studio

Issue four includes:

Games: Max Headroom • Skyfox • Lord Of The Rings
Features: 128 Review • Art Studio • Dimmer Switch

Old *Your Spectrums* never die — they get snapped up sharpish by new readers. Quick — use the coupon below to bag your own back issues at £1.10 a throw. Or visit our shop, open Monday to Friday 9.30 am to 5.30 pm at 14 Rathbone Place, London W1P 1DE.

Q My Spectrum loses its colour capacity on warming up. How do I change the faulty part on my Spectrum as repairs are very expensive here. Oh, and while I'm here my Spectrum+ has lost its extra function keys, how do I fix this?

M Neuman, Israel

Q Inside the Spectrum you should find two white discs — adjusting the bottom one when the Spectrum is hot should bring the colour back to its cheeks. As for the Spectrum+, there is a little bar under the keyboard top secured by screws where the extra membrane overlay is connected to the main one. Tightening this or adjusting the membrane underneath should bring the extra functions.

Q Although I've never had any problems with my Seikosha GP-50S printer itself, it causes 'mucho problema' when I try to connect other hardware devices. This mainly happens when I load and save a program. Do I hit it with a rubber mallet or is there a more rational solution?

Mark Danham, Hull

Q Umm, I think it would be a good idea if you didn't hit it. The printer more than likely isn't well-seated on the back of the Spectrum which is causing it to appear at the same time as the ULA, crashing the computer. You'll only make it worse if you attach more equipment at the back. Try to stop it wobbling or get one with a tighter edge connector.

Q I'm having mega-problems setting the 'bit image mode' on my serial Epson P40 printer. I've tried various listings and unfortunately failed miserably.

Paul Stackhouse, Burnley, Lancashire

Q Well, you've come to the right place. Try setting up and sending the ESC codes via the B channel if you're using the Interface 1.

Q Where can I get a backplane, as seen in Your Spectrum issue 18 in the Bits and Pieces article? The manufacturer, UMICRO says it no longer does them.

BJ Flatt, Worcester Park, Surrey

Q Well, EPROM Services do a mother board for the Spectrum but it's unbuffered. If I were you I'd give them a try.

Q I wonder if you could help me Steve. I bought a Fidelity CTM1400 TV to use with an Adapt Electronics composite video interface so that I would get a better picture. It is an improvement but I still get dot crawl, especially when using BEEP. Is there anything I can do to get rid of it?

KE Hankin, Aldridge, West Midlands

Q Seems to me that you've already done your best. The only way to eliminate it is to use a black and white picture I'm afraid. Have a bash at adjusting the top white variable capacitor as yours is an issue 2 — this may reduce the problem slightly.

Q I need some advice on how to construct a microdrive — does it contain a ROM?

James Holmwood

Q Yes it does have a ROM and circuitry to bring it in without disrupting a program. This is usually done by using a Non-Maskable-Interrupt which doesn't work on the regular Sinclair ROM. It then runs its own program and transfers all the memory contents to tape so that it can then be reassembled in the Spectrum to be loaded back into memory from microdrive.

Restarting can then be carried out by simply jumping back to the original ROM to restart the program where you left off.

Q Do I need to buy *Tasprint* in order to print out text from *Tasword Two*? I've got a Timex 2040 printer and cannot afford to buy both.

Anthony Empson, Southway, Plymouth

Q Breathe a sigh of relief. Anthony — no you don't. *Tasword* includes a Sinclair printer copy option and you can use this with the Timex.

Q You're my last hope! I've taken my Timex 2040 printer back once but it still doesn't work. I'm desperate. I can't get screen dumps to work properly — they come out all elongated with gaps in. I have only one more thing to say — help!

Nigel Bareham, Winchester

Q Sorry old chap! I've investigated the problem by looking inside the printer but it seems that the spacing is governed mechanically. There's no solution to the problem as you can't reprogram it or reverse the printer paper.

Q Does anyone know of a program to control a digital LN03 laser printer for vertical printing etc?

Colin Nesbitt, Dumbarton, Scotland

Q Unfortunately you don't say if this is controlled through an Interface 1 RS232 interface or some other. The vertical printing is a function of the control codes (codes below 32) on the printer itself and varies from printer to printer so my advice would be to look in the manual. To send control codes on Interface 1 the B channel must be used, otherwise the Spectrum will convert or ignore these codes.

Q Help! Since I bought a Wafadrive for my issue 2 Spectrum I've had nothing but trouble from my peripherals.

Dr John Reynolds, Sheffield

Q The Wafadrive uses addresses from 0 to 16 so I suggest you try putting in the peripherals before the Wafadrive and check that the address lines A0-A4 are all at binary 1 before you bring in your own devices.

Q I'm trying to convert my Spectrum to a portable machine but I'm having a big problem. When I connect it to 9+D1200 Ni-cad batteries it blows the power transistor R4 (ZTX650). What can I do?

John Ellingford, Pulham St Mary, Norfolk

Q Oh dear! There are two possible things you can do. Either bring your voltage down to 9.25 volts and fit a 2,000 microfarad capacitor across the Spectrum's power input to slow down the surge you're getting. Or, you could put in a small value resistor in series with the +9 supply but before the capacitor. This would bring the surge down even more.

Q My Timex printer produces oval circles — crazy! I've been back to the shop but they say it's up to specification. What do you think?

Steve Summerscales, Batley

Q This happens to the best of printers because the distance between each line of dots is greater than the distance between each dot on the line. This is known as 'aspect distortion' in the trade and arises because the characters are five dots by seven high, not eight by eight as on the Spectrum. Sorry, but you're stuck with it.

HARD FACTS

Are your peripherals proving a pest? Send your hardware hard luck story to Steve Adams.

Q Please, please, please help. I really want to get onto Bulletin Boards but I'm not sure what I need apart from a VTX5000 modem.

David Scott, Thetford, Norfolk

Q Well, you'll need some software as well as the VTX since most boards operate on ASCII not Prestel software which is all the VTX contains. You can either get something like Specnet for the VTX or you can pay a little more for a new modem called the Voyager that has auto-dial/answer and comes with both ASCII and Prestel software on ROM. It costs about £100. As for costs, most Bulletin Boards only cost you the price of the phonecall and that obviously varies depending upon time and distance. My Sinclair - only board is on 01-249-3238, 24 hours a day at 1200/75 and 300 baud.

CentreSoft presents

With over four years experience of providing practical software solutions for business and home applications, Gemini have put together their entire range of famous titles for the Spectrum and Spectrum Plus in ONE special pack, at a VERY SPECIAL price. Whether you're a cassette or microdrive user, this super value pack contains all the serious application software you're ever likely to need for your Spectrum, from home accounts and database management to a complete professional business accounting system. Gemini's OFFICE MASTER is here—put that computer to WORK!

- Database
- Stock Control
- Final Accounts
- Easiledger
- Mailing
- Cash Book
- Home Accounts
- Graph Plot

Each pack contains ALL 8 programs, demonstration data files, and clear and comprehensive manuals for EACH program. Gemini's previous retail price for all these programs individually was £179.60. Now they're all together in ONE COMPREHENSIVE PROGRAM PACK.

OFFICE MASTER

Tape: £15 Microdrive: £17.50
includes P&P and VAT.

Database

Use this program for storing all types of information just the way YOU want to store it. You set up a computerised 'card index' system and add records and data to the file in the format that you choose. Advanced features include sorting and searching for specific records, mathematical calculations, printer routines, data summaries, etc. If you don't have a database, you certainly should!

Mailing

This is a specially designed database for storing names and addresses, and printing out in label format. Special search routines are included for selecting only names and addresses that conform to your criteria. The famous Gemini 'Searchkey' facility is included with this program, and data entry is simplified by an on screen label painting system. Just type in those names and addresses as though you were using a typewriter!

Stock Control

One of Gemini's speciality programs, this software will take the drudgery out of keeping stock records. Enter details of part number, description, unit quantity, cost price, selling price, minimum stock level, units in stock, order quantity and supplier details. Detailed reports include totals of stock at cost and sale price, cost of bringing stock up to level specified, gross margin, understocked items, etc. Full browsing facilities to make inventory management a pleasure!

Cash Book

This is a full and comprehensive cash book accounts system designed to REPLACE your manual ledger entirely. It will take you from the 'shoebox' situation of sheaves of invoices, cheque book stubs, petty cash vouchers and bank statements etc. to a properly constituted trial balance. You may then take your FINAL ACCOUNTS package and produce profit and loss account and balance sheet ready for audit. A REAL money saver when it comes to your accountancy bill!

Final Accounts

Using the data file on microdrive or cassette prepared by the cash book program, this software will produce comprehensive end-of-year reports ready for audit by your professional adviser. The Gemini cash book and final accounts system is now in use by many thousands of businesses and as a 'classic' professional program has been translated for a wide variety of micros. Cash book and final accounts alone warrant the purchase of this OFFICE MASTER program pack.

Home Accounts

Designed as a complete financial and budgeting package for home affairs, this program allows the user to set up a budget for items of household and family expenditure and compare actual expenditure with budget as often as required. A running total of surpluses and deficits is available both numerically and in bar graph form. A complete bank account routine is included, together with suggested expenditure categories which may be simply altered as required.

Easiledger

Consists of invaluable routines to allow the creation of any type of financial ledger system. Its usefulness lies in its ability to produce account balances instantly for debtors and creditors together with an audit trail of all entered transactions, with dates and references. A year-to-date summary is included of sales, purchases, receipts and payments over a 12 month period, and most importantly, a completely interactive bank account database is featured.

Graph Plot

At last, superb graphs, bar charts and pie charts on your Spectrum! With a complete data entry section and the ability to load and save files, this is really one of the fun programs to use. Represent numbers and data in clear diagrams with this package, and print them out on your printer to accompany reports, budgets, etc. Very highly recommended for the office, home and school. Also includes capability to provide mathematical function plotting.

FAST FORWARD

When the Spectrum starts to load, it's time for most of us to nod off. Until now — this prime cut of code from Danish programmer, Esben Krag Hansen, speeds up the whole process.

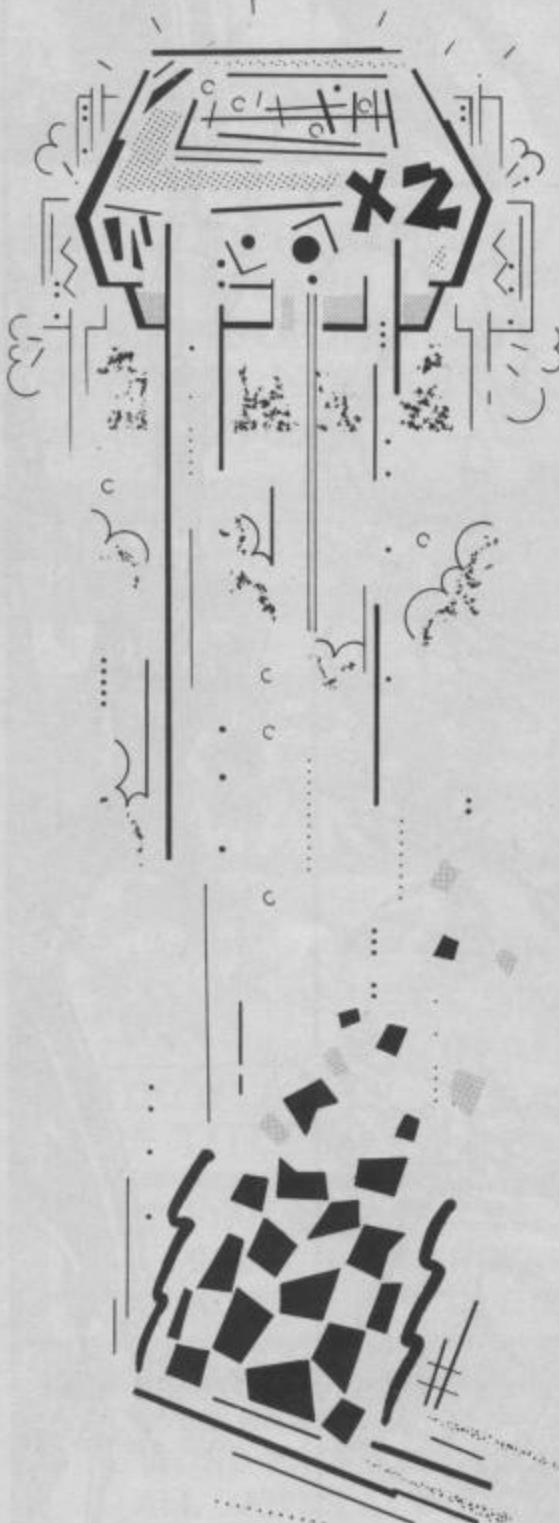

Illustration: Russel Walker

Have you ever felt you were about to peg out from old age waiting for your Speccy to load? Well, this ingenious piece of machine code goes a long way to solving the problem. With it, you can double the speed of saving, loading, verifying and merging. And it does it by using improved versions of the ROM cassette handling routines in which the timing values can be changed, so giving you full control of the data transfer speed. So, you can put away those pension books for a few years yet!

FRIENDLY... AND FAST

The program is very user-friendly — there's no need for all that PEEKing and POKEing here. Type it in following the instructions, then save it to avoid any mishaps — no-one's going to relish retyping all those data statements! Now start it with RUN and you'll be asked immediately for a start address. And the good news here is that the turboloader is relocatable. You can enter any start address suitable for storing the 1845 bytes of code and the loader program will relocate the turboloader to run in that area. So, you'll have no problems using the turboloader in conjunction with your other machine code utilities.

When the loader program's finished, you should save the machine code as instructed on the screen. Now you're ready to roll...

SPEED SAVING

Using the program is simplicity itself. All you have to do is insert a RANDOMIZE USR statement before the turboloader commands. It's this that activates the turboloader's command interpreter. The turboloader will now remain activated until it reaches the end of the line or a command it doesn't recognise.

As an example, let's have a look at how you'd save a Screen\$ using the turboloader:

RANDOMIZE USR x: SAVE "test pic" SCREEN\$

where x is the start address of the turboloader. And, of course, the program supports all the usual cassette commands — SAVE, LOAD, VERIFY and MERGE.

But stop, you're saying — at least, you are if you've just tried executing the statement above. It's no faster at all. A-ha! (Famous Scandinavian pop group? Ed). That's because I've yet to tell you how to change the transfer speed — the baud rate. Initially, the speed is exactly the same with or without the turboloader — 1500 baud (bits per second). But you can easily change this using one of the four new commands that the program adds to ZX Basic.

The problem is that while SAVE, LOAD, VERIFY and MERGE already exist in Basic, where do we find keywords for the four new commands? I've got round this by adopting four of the Speccy's existing keywords, RUN, LIST, INPUT and PRINT. They all still work as normal except when you're using them as commands to the turboloader. Then their new roles come into play.

NOTE FOR TRAINSPOTTERS

Ha, thought you'd caught me out didn't you? Doesn't he know, you're call machine code makes the RND function unusable? That every call same number all the time? Well, yes I do! And to get round this side effect, I've made it so that the turboloader on return loads the BC-variable SEED. Then the RANDOMIZE USR command will only load SEED with the value it already contains. And at all! So, the whole problem is eliminated using a single machine code instruction, LD, BC (SEED) that's only four bytes long.

FAST FOUR-WARD

The four 'new' keywords work in the following way:

LIST

This command reads a header from tape and lists it on the screen. For example, LIST will display the start address and the length of a machine code block. And that should keep the hackers happy!

If you want to see how the first two commands work, try:
RANDOMIZE USR x: RUN 3100: SAVE "me" CODE x, 1845: LIST

PRINT

This command lets you choose just how much info you want on screen. It should be followed by either a 0, 1 or 2.
0: Neither the baud-rate nor the names of the data blocks during LOAD/VERIFY are printed onto the screen i.e. zilch!
1: Only the names of the data blocks are printed.
2: Everything is printed.

RUN

This now changes the baud-rate. It must be followed by a number ranging from 1500 to 3500 inclusive, in steps of 200 (1500, 1700, 1900 and so on). The maximum baud-rate you can use all depends on your tape recorder. But most of you should be able to run at a minimum of 3100 baud — more than double the normal speed.

INPUT

This is used in exactly the same way as PRINT. It deals with the message "Start tape, then..." and then waits for a key in the SAVE command. The values are used as follows:
0: The message isn't printed and you don't have to press a key.
1: The turboloader only waits for the key press.
2: As usual.
The turboloader is initially set to PRINT 2 and INPUT 2.

THE OFFICIAL

F.A. Cup

GAME

R.R.P.
£7.95

For the first time the Football Association has fully endorsed a computer football game. It is a realistic football simulation which lets you take 10 teams through the competition from the First Round.

Tony Williams, celebrated author of "League Club Directory" and "F.A. Non-League Club Directory" has provided authentic up-to-date home and away form for a total of 124 League and Non-League teams.

You must decide which tactics your teams use throughout the various matches and you must make managerial decisions which may well effect the morale of your team and subsequently the score! You may represent a local team, and if you are lucky enough to receive the benefit of a "giant-killer" your team may even experience a dream cup run!

Above all, The Official F.A. Cup Football game comes up with realistic results that's why the Football Association have given it their full approval!

TURBOLOADER

Phew, look at all those data statements! But don't despair; it's not nearly as bad as it looks. The number in front of every hex-string is a checksum. So the loader program automatically checks every single byte you've typed in. And unless you've made a real pig's ear of it, your typing errors will be detected and the appropriate error message printed on the screen. Finally, save it and start speedin'.

EXPRESS SPECTRUM, BBC & COMMODORE REPAIRS!

FREE!
SOFTWARE
WORTH £24 WITH
EVERY COMPUTER

*Spectrum repairs only

SPECTRUM REPAIRS
BETWEEN £9 and £20

BBC REPAIRS
BETWEEN £14 and £45

COMMODORE
REPAIRS BETWEEN
£14 and £35

When we say **NO HIDDEN COSTS** we mean it!

NO HIDDEN EXTRAS

FIRST to provide 'while-u-wait' service.

FIRST with international repairs.

FIRST to provide Insured/

Recorded Delivery on return journey.

FIRST with **LOW CHARGES**

(e.g. £9 for keyboard faults).

FIRST with discounts for Schools, Hospitals and H.M. Forces.

FIRST to charge prices that are **FAIR** to you!, we do **NOT** charge **HIGH FIXED** prices!

FIRST for **PROFESSIONALISM** 'Of all the repair companies 'Sinclair User' spoke to, MANCOMP seemed the most professional when it came to advice and a helpful attitude'. AUGUST '85.

FIRST for **LOW PRICES** 'My Spectrum blew recently. I took it to MANCOMP, who fixed it in 8 mins and for less than £10. They are local, 'clued-up' and blindingly efficient'. COMPUTER COLUMN, '4 HEATONS DIGEST', (Vol. 1, No. 11)

FIRST for **ADVICE AND HELP** 'I have come across a firm that will be more than willing to advise you as to how to remedy your problem. They are called MANCOMP, and as well as repairing faulty Spectrums, are also quite willing to discuss your problems with you, and offer reasonably cheap and (MORE IMPORTANTLY) CORRECT cures.' Phil Rogers 'POPULAR COMPUTING WEEKLY' JAN. '85.

FIRST for **SPEED** 'One firm, at least, can usually effect any necessary repair 'over-the-counter' in 45 minutes. Based in Manchester, MANCOMP can offer what is arguably the fastest turnaround in the business, the personal callers.' 'CRASH' Magazine, June 1985.

FIRST for **HONESTY**. We let you watch your computer being repaired. Our engineers don't disappear into another room!

WHY PAY HIGH FIXED PRICES? N.B. OUR PRICES INCLUDE **VAT**, P&P and **INSURED** Delivery!

PHONE or SEND computer (without power supply or leads) for **FREE** NO-OBLIGATION estimate! If you don't like our estimate we will return your computer **AND** refund the postage incurred.

MANCOMP LTD.

(Dept. VS 4/86),

Printworks Lane, Levenshulme,
Manchester M19 3JP.

WE set the
STANDARDS
and PRICES
others follow!

48K/128K SPECTRUM UTILITIES

CODE SLICER 2 is a new cassette handling utility which will read ANY section of a tape into ANY store address. It will list the size of "headerless" files and will read Basic or Machine Code programs created at any of 7 different speeds. The instructions supplied explain how to use this product for Microdrive, Wafadrive and Disc transfers, general hacking etc. Many hints, tips and examples are included to enable you to gain the full potential of this amazing new utility. A tape header reader is also supplied which will stop "auto-run" Basic programs if required. Invisible programs can be made visible, large programs can be split into several sections, headers can be added to headerless files and much, much more.

Simple to use — just £5.50

KWIKLOAD has now been amalgamated with our **VARILOAD** utility to allow 48K & 128K cassette software to be loaded between 2000-6000 baud. This means a saving of 1.3 — 4 times the normal loading time. No additional hardware is required and the converted software loads independently of the **KWIKLOAD** tape.

The professionally written instruction manual explains how to convert most commercial programs including Basic, Machine Code and many which are protected.

48K Gyroscope loads in 135 secs (4500 baud)
48K Exploding Fist loads in 105 secs (4500 baud)
128K Never Ending Story loads in 4 mins 10 secs (3500 baud)

"A bit like upgrading your C5 to a 3.5 litre car" ZX Computing
"I'm very satisfied" — N. Mellet — France

"Thank you for the delivery of your excellent Kwikload"
A. Cupif — Switzerland

Only £6.95 including a free tape header reader

■ Hi! All Speccy users. I'm 17 and own loads of games to swap. I like micros, music, synths and games. All letters answered. Steve Rupik, 208 Buchanan Road, Parson Cross, Sheffield S5 8AS.

■ I'm 16 and would like a female penpal 16+. Beginner in Basic and would like tips and *POKEs* for the Spectrum. Write to Richard Sadler, 2 Shrawley Road, Northfield, Birmingham B31 3EG.

BACKLASH

Iolo Davidson hits out at the same old software.

Maybe I'm not the best person to judge, not being a convicted arcade addict, but isn't it all getting a bit sameish? It seems that whenever any slight innovation in gamesware appears (and I can't actually remember the last time it happened), it's instantly submerged in a flood of me-too's and sequels, and even sequels of me-too's.

Floods of rubbish are one thing. We don't expect all that

Some of today's rubbish is actually very well programmed.

much from the producers of entertainment products like television and pop music, so why lean on the computer games people? What I object to are floods of high priced identical rubbish.

Some of today's rubbish is actually very well programmed. People have done marvellous tricks with Spectrum software. Consider that the machine is now nearly four years old, with what are pretty restrictive limitations on graphics and sound, and then look at what the competition has to offer in the way of software. Most of their best stuff was available first on the Spectrum. Often it hasn't improved in translation.

But that isn't the point, terrific graphics against all odds don't make up for an appalling lack of new ideas. Of course, we've always had the *Pac-Man* clones and the like, imitations of the cut-down coin-op arcade games, but we used to get plenty of weird and wonderful one-offs as well.

Back in the days when the standard price of a Spectrum game was a fiver, lots of firms would risk bringing out something a bit zany and hope it'd sell.

Now that top flight games cost at least a tenner, no one

seems willing to try out a theme unless some other company has already had a success with it.

Maybe there just aren't any new ideas. The people I talk to always claim to be searching for people with ideas and not finding them. I don't think that's the trouble though. I think that really new ideas look wrong to established publishers. They think to themselves (without really noticing what they're thinking), "That can't be a very good idea. It isn't anything like

any of the successful games already on the market."

The trouble with this imitative cycle is that truly new ideas are chucked out as unlikely to succeed, while old ideas with a minor twist are accepted as marvellous innovations. This didn't bother me too much when the trend was for *Jet Set Willy* clones. I quite liked that particular genre. It was still good fun even after adding 3D graphics and moveable objects and changing the background to jungles or castles. But the time always comes when the cloning shifts to a new scenario, and if the new lot are not to your taste, then too bad.

Recently we've been going through a particularly bad patch. The charts have been dominated by a series of games based upon the ancient oriental arts of punching and kicking. Also the more domestic art of just punching. The fact that so many of these games have found a willing market is particularly disappointing to me. Not merely because they're all the same, but because the basic idea is nasty and uncivilised.

There's already been a certain amount of outcry about the zap-the-invader type of computer game, but I find

these less disturbing than games in which you try to kick another human being.

Blowing slimy aliens out of the air is not only very obviously a fantasy pastime, but it seems to be to be a reasonably moral act, especially when (as is usual) it's performed in defence of one's home planet. Kicking human beings, however, is immoral, illegal, and not a little dangerous.

Now, I don't want you to think that I am one of those people who's against the portrayal of violence in the media. What I abhor is the lack of realism.

People learn a great deal about the world through television and the movies, and I expect that might apply to computer games too. Specially as the graphics and presentation improve. Or at least, games can reinforce impressions taken from other media. We ought to be presented, therefore, with truthful pictures especially when we're given so little choice in the subject matter as we are with software.

Have you ever noticed how the A-Team spray thousands of bullets around the set without ever hitting anybody? Or how Mr. T seems able to knock people through walls without so

about, but that of the young. I've been both punched and shot (in the head, if you must know), and the way I look at reality is not likely to be confused on these points by a mere computer game. But young people with little experience of genuine violence might end up with the idea that it's exciting, rather than painful and debilitating. Ridiculous, I know, but that's how the subject is constantly presented to them. Since it's probably impossible to eliminate violence in the real world, I think it would be wrong to purge it from the TV screen or other media. But I have an idea that could encourage an intelligent attitude towards violent acts. It's a revolutionary new idea and just the kind of innovation that the arcade software business has been crying out for.

I propose that the next Kung-Fu game clone is issued with a special pack of add-on hardware. When the little man on the screen kicks the 34th Dan, or whoever, in the groin, the player gets to see the victim's lungs spray out of his ears while simulated blood seeps from the back of the television set all over Mum's carpet. Then, if he misses

'I've been both punched and shot (in the head, if you must know)'

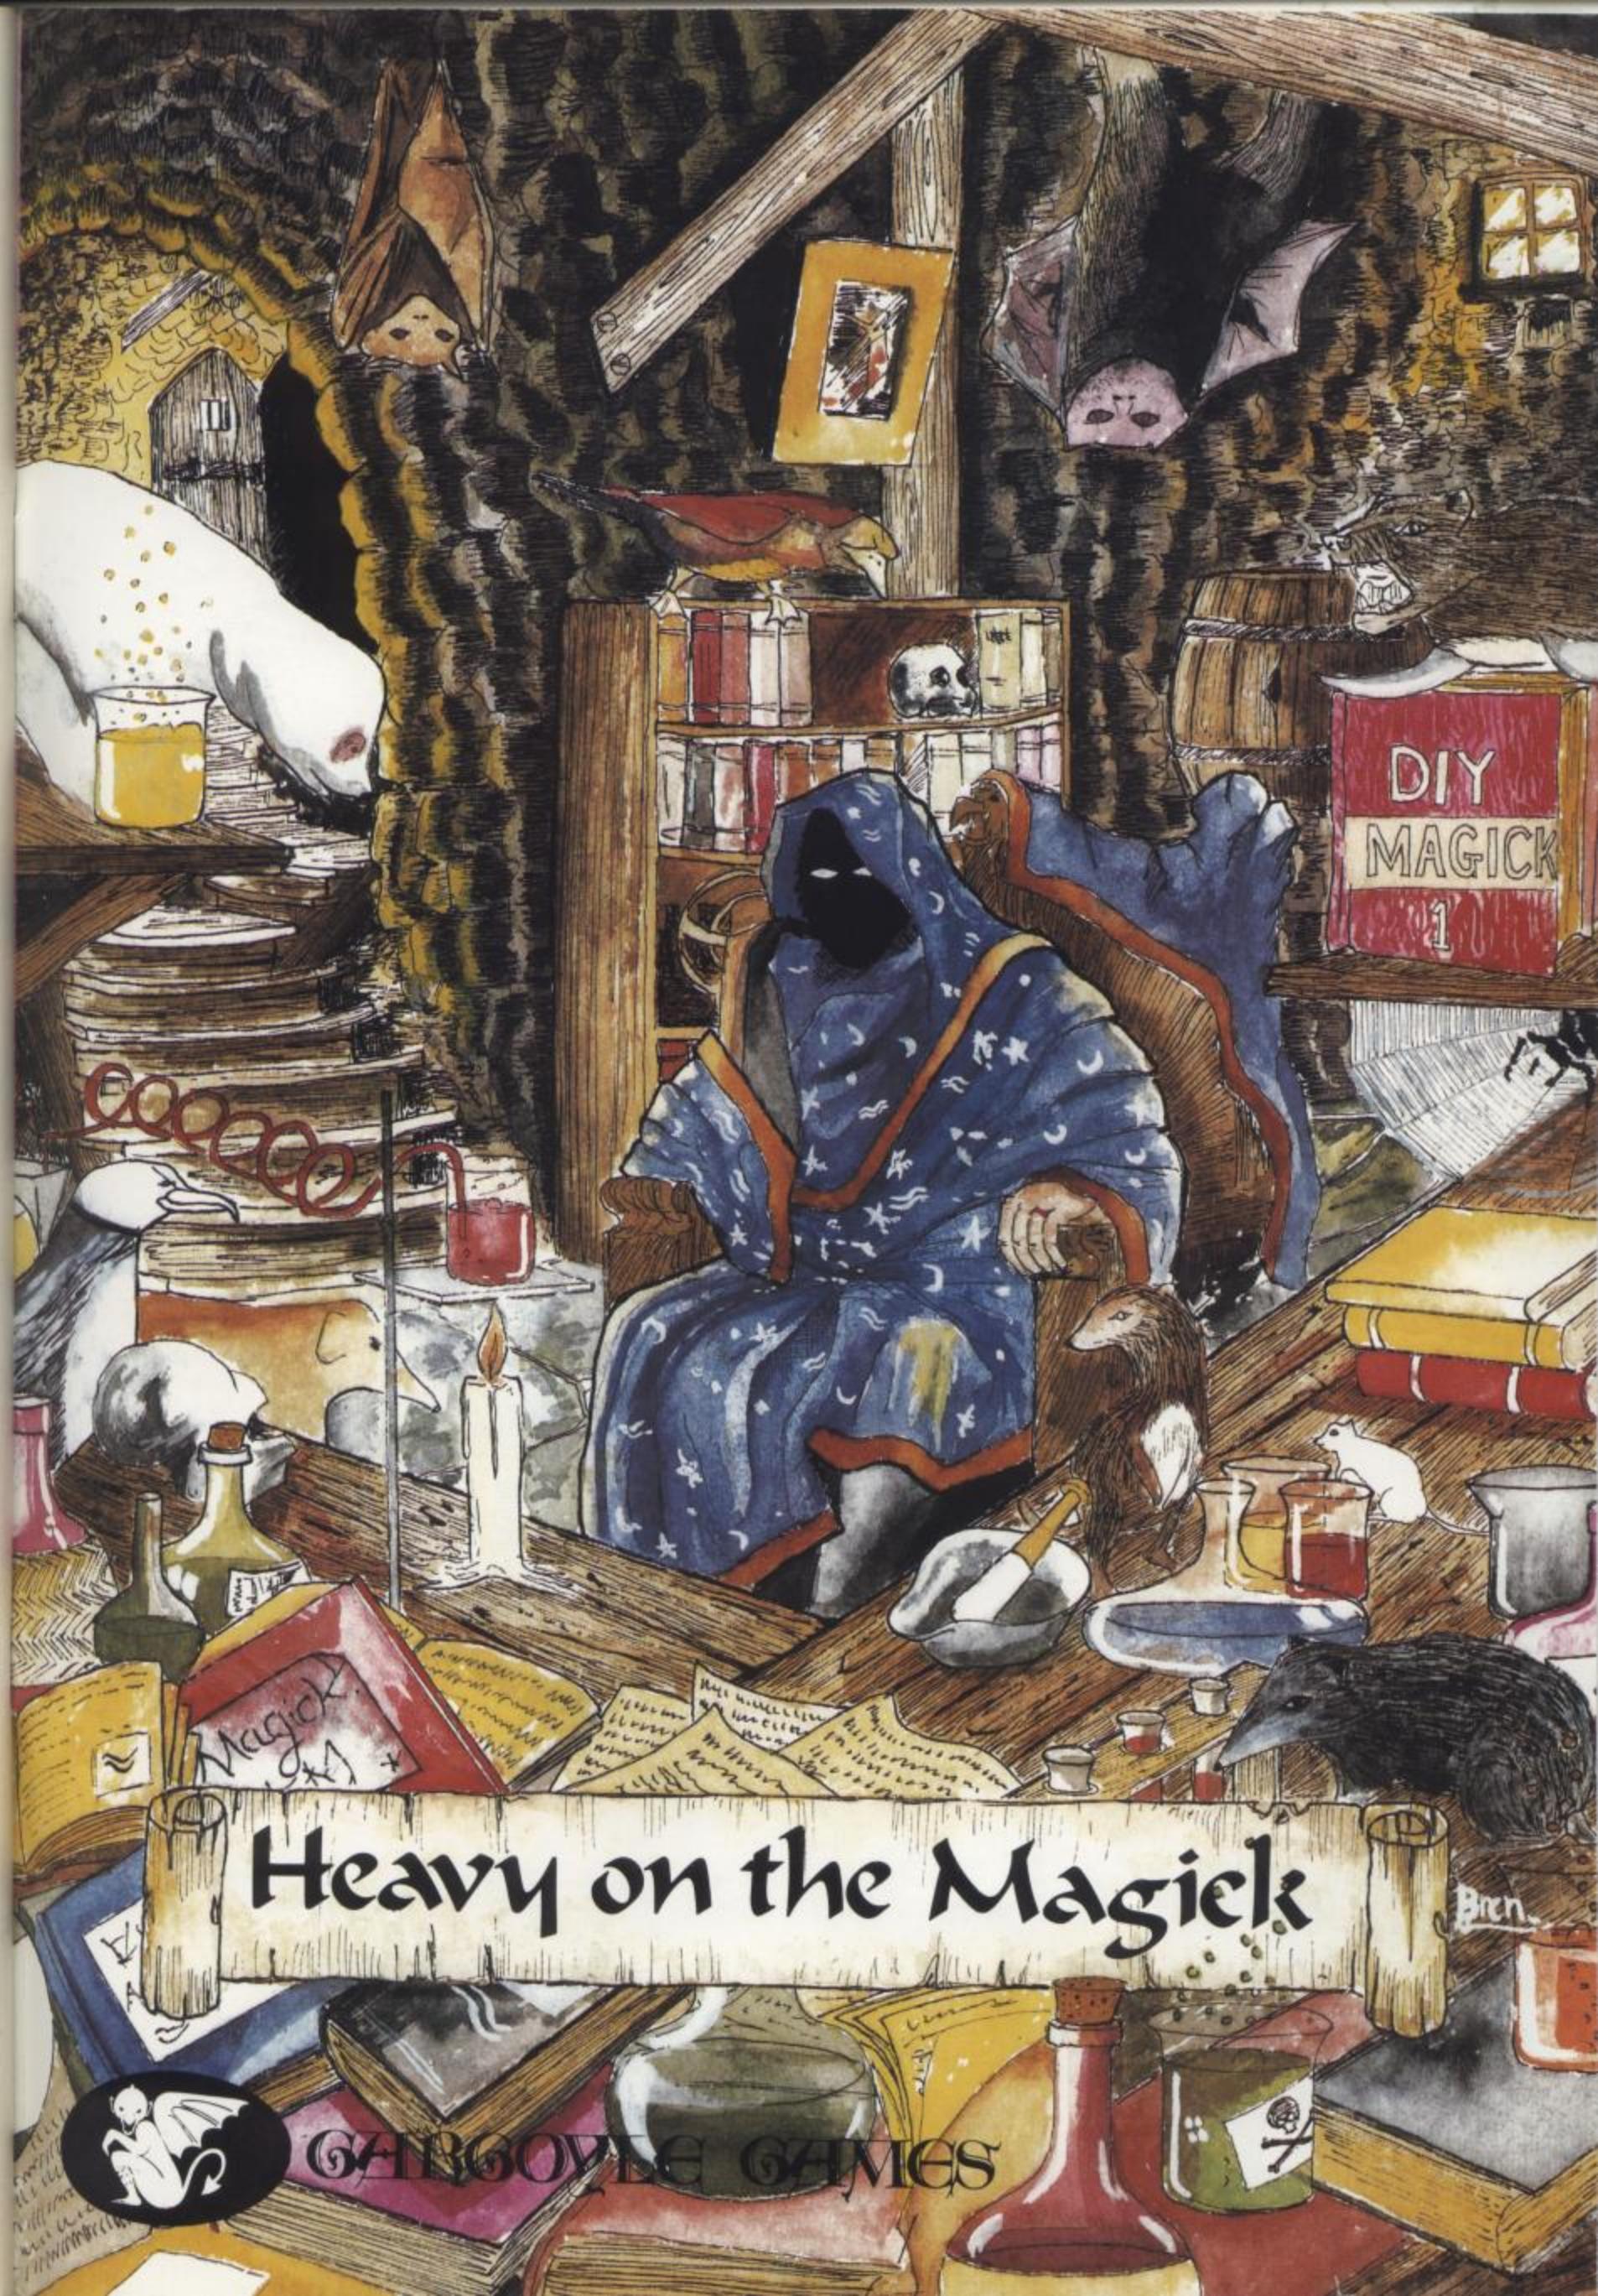

much as bloodying their noses? Dangerous and deadly assaults are portrayed as knockabout fun. This is an extremely misleading distortion of reality, and if we accept it, even subconsciously, it could damage the way we look at the real world. In the same way, a game that allows us to beat the daylights out of a computerised opponent with no more penalty than an aching joystick wrist is bound to warp our ids.

Naturally, it's not my own subconscious that I'm worried

blocking the opponent's return blow, the joystick shoots out on its telescopic shaft and breaks his nose.

I call this technique '3D Violence' and I reckon it's the newest idea to hit the software scene this month (without being so different as to lose its way in the marketplace of course — mustn't try to buck the established trends). The only problem is, it's bound to put up the cost of the game. But I think it'd be worth it, for the kids' sake, don't you?
