THE SPECTRUM BASIC COMPILER

- **BLAST!** is the first fully compatible OPTIMISING BASIC COMPILER for the Sinclair ZX Spectrum and Spectrum +.
- **BLAST!** will compile ANY BASIC program, without alteration.
- **BLAST!** will take your BASIC programs and transform them into super-efficient code running at up to forty times the speed of BASIC.
- **BLAST!** can produce both native machine code and a compact p-code, for programs where space is at a premium.
- When you have **BLASTED** your programs you are free to distribute or sell the results without any restriction.

SIMPLICITY ITSELF

Using **BLAST!** couldn't be simpler. Just load it with your BASIC program and press "C" to compile. In a few seconds the compiled program is ready. Just type RUN and see your software run up to forty times faster.

OPTIMISATION

BLAST! doesn't just compile your programs; it also applies a range of sophisticated optimisation techniques to enhance the performance of the compiled code.
Any program can be compiled without alteration, but we think you will enjoy the wide range of extensions to BASIC built into **BLAST!**
BLAST! features genuine integer variables, debugging facilities, program protection, and much more. It will operate in resident mode, or with tape or microdive.

TOOLKIT INCLUDED

BLAST! provides the complete BASIC programmer's package. As well as a sophisticated compiler **BLAST!** includes a comprehensive toolkit with a full range of features including renumber, single-step, search and replace, and block handling operations. Use it to test and develop your BASIC programs before compiling them with **BLAST!**

COVER BY MARK WATKINSON

Gemini for the 48K Spectrum

Bumper Packs

Business Bumper Pack

C.0415 £24.95

The best in the business! Written by businessmen for businessmen, Gemini's board of Directors contains three Chartered Accountants, and their accounting software brilliantly maximises the potential of the 48K Spectrum for commercial use.

Containing a professional standard manual, the Bumper Pack is in fact a COMPLETE CASH BOOK ACCOUNTING SYSTEM replacing ALL manual records, and is ideal for the cash based business. You can transfer all receipts and expenditure records to the computer, together with Bank Account, Petty Cash records, and all VAT transactions. The system also supports 90 nominal accounts! Summaries are then prepared by the 48K, listing all the information which would normally take hours of tedious manual bookeeping... in a fraction of the time. Gemini's Cash Book Acounting System is even used by Chartered Acountants for incomplete records.

Having prepared these summaries, and a Trial Balance, the software then allows you to add details of year end adjustments, such as Depreciation, Bad Debts, Creditors and Debtors, and prepares a full Balance Sheet and Profit & Loss Account. It even produces COMPARATIVE figures, such as budgets or previous years' results, alongside the current year's figures, together with notes to the accounts.

Written to the same specification as Gemini's widely acclaimed Accounting Systems for the BBC Micro and the Commodore 64, this BUMPER PACK for the Spectrum 48K represents quite remarkable value for money, and could easily save its cost in the first week of use! Business decisions can be made more quickly and profitably, based upon accurate, up to the minute, computer data, and vital management information is available from your 48K at the touch of a key.

Suitable for Sole Traders, Partnerships and Limited Companies.

MICRODRIVE COMPATIBLE

Also available for the following machines:

BBC Micro			
	Cassette	**C.0405/6**	£119.90
	40 track disk	**C.0405/6/40**	£119.90
	80 track disk	**C.0405/6/80**	£119.90
Commodore 64			
	Cassette	**C.0818**	£89.95
	Disk	**D.0818**	£99.95

Home Software Bumper Pack

Contains the following programs, all cleverly and excitingly written to **STRETCH** the 48K to the limit... the ideal follow up to leisure software to truly exploit the Micro's potential for ALL the family (including Mother!).

C.0417 £24.95

Database: The Gemini Database Management System is a program designed to enable the user to store all types of information in similar format to a card indexing system. The program will ask you for the headings under which you wish to store the information on a 'card', i.e. for a record collection database these might be 'Artist', 'Song', 'Composer', etc., or for example in a database set up for a deep freezer, 'Use by date', 'Value', 'Type of food', 'Shelf', etc.

Having set up your fields, you may then add, delete or change information on the 'cards' under the headings you have elected. Gemini databases contain other important and useful utilities as well, e.g. alphabetical and numerical sorting, numeric calculations, finding records that meet specific requirements, line printer routines, browsing facilities, etc. For example a list of all recordings by a particular composer, calculate total value of freezer contents, etc.

Mailist: Gemini's Mailist program will enable you to keep a record of names and addresses and then print, examine, sort and find them, all with special selection techniques, containing our exclusive 'SEARCHKEY' system, giving you the option of creating your own dedicated coding system for each name on file. For example, on most mailing list systems, you are only given the standard heading such as name, street, town, country, postcode etc. With the Gemini searchkey system, you could find, say, all names on the file that are companies having a turnover in excess of '50,000' or all names that are subscribers who are behind in their subscriptions or all names that are eligible for a Christmas card this year!

A full and useful range of routines is included in the menu, and the program allows you to set up your own format for printing labels, i.e. the tab settings you require and spaces between labels, etc. Multiple copies can also be printed.

Graph Plot: Provides an easily assimilated visual representation of numerical data.

For example monthly sales statistics comparing two year's results may be instantly converted into two side by side pie charts, histograms or graphs... for easier visual comparison and assimilation. It is particularly recommended where any kind of mathematical plotting facility is required.

"Independent Press Comments"

"Remarkable software, friendly and well designed, a pleasure to use."
— **Gemini Cash Book, The Scotsman 12/8/83**

"Will enable business people with a moderate grasp of accounting principles to produce a set of figures that will satisfy both the bank manager and the Tax man."
— **Gemini Cash Book, Micro User, August 1983**

Home Accounts: Designed as a complete Home Accounting package, this program allows the user to set up a budget for items of household expenditure and compare actual expenditure with budget. A running total of all surpluses and deficits is available both as digits, and in the form of a bar chart.

A complete Bank account routine is included, together with suggested expenditure categories such as mortgage, rent, rates, telephone, gas, electricity, etc. However, these may be deleted or augmented without difficulty.

Available from:

Larger branches of Boots and W.H.Smith and most good software dealers... or phone Gemini for prompt despatch quoting your Access, Visa, or American Express card number. Telephone (0395) 265165. Alternatively make your cheque or Postal Order payable to Gemini Marketing Ltd., amd send to Gemini Marketing Ltd., 18a Littleham Road, Exmouth, Devon EX8 2QG.

FRONTLINES

Will you be *Snowbound* this summer? Who's an April Fool then? Has Legend got a superiority *Komplex*? Is your thigh bone connected to your knee bone? Is *YS* doomed? Find the answers to these and other curious questions in ... Frontlines!

COUNT DOWN TO ... DUSTY BIN!

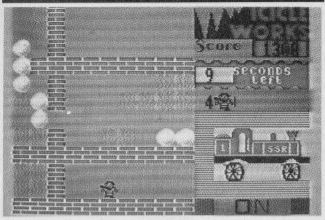

Ted Roger's TV programme, *3-2-1* made a brief and not very glorious appearance in the adventure game *Hampstead*. There you were in your dingy flat watching it on the telly — how low can a person sink? Now though it's about to be immortalised in its own game with the added attraction of not having to watch Ted Rogers!

There are thousands of promising prizes to win, but the game itself doesn't offer anything spectacular. Still, if you're after a holiday in Spain, a colour TV or lots of other luxury goodies, the procedure is pretty simple and could be worth a go!

The aim of the game is to gamble your point score according to the risks you want to take. Nothing too tricky there, so you may feel it's worth lashing out £9.99 and running up the points. At worst, you could end up with a Bendy Toy's Dusty Bin (*and I know where I'd put that! Ed*).

The game's only available by mail order so if you want more info before forking out the fivers give Paul Duffy a ring on 01-904 1735.

SNOWBOUND?

In the wake of *Boulder Dash* fever, Statesoft has come up with a little ditty called *Icicle Works* ... which has nothing to do with the rock group of the same name.

The idea of the game is to rush around the Arctic, collecting and assembling the pieces of a toy.

Interested parties should gather round for a review in Joystick Jury next month. But for those who can't wait, give Statesoft a bell on (0438) 316561.

What's all this racquet? Jonah Barrington having beaten Rod Evans of New Generation Software at squash is about to beat him again. It's all in aid of the *Jonah Barrington Squash* simulation game that's soon to bounce onto the market.

So, now you can work up a sweat on the software squash court before trying the real thing. Could be a smash hit!

SPECTRUM UK OK!

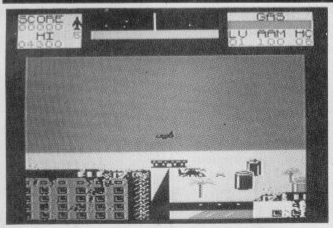

Compo results time again! This is the bit we all like — handing out the lovely lolly. Do you remember the Spectrum UK Competition back in issue 12? We asked you to put in order of importance the attributes you'd like to see on an imaginary Spectrum-based computer. The likelihood of something with even half the goodies we laid before you ever seeing the light of day is pretty remote. Still, it's always good fun to dream!

No-one came up with exactly the same list as our tame Sinclair spokesperson, so we picked as our winners the first out of the hat who came closest. The lucky prize winner will receive a voucher for £500 to be spent in any Spectrum UK store on Spectrum peripherals and software. And who is it, you cry. Step forward B J Rumbelow of Deal. You're about to acquire one of the largest Spectrum systems in the whole of the South-East!

But we're not finished yet — this really was a grand prize. There are still five more winners to be picked who'll receive similar vouchers for £100. They are A D Stephenson of Worcester; M R Carre of Guernsey; J Lock of Llandaff North; Adrian Amell of Chichester and D P Minors of Pershore. Congratulations to all of you.

Oh, and what was the most important attribute of any new Spectrum based micro. Software compatibility was the first choice of the spokesperson and of the vast majority of our competition entries. It's pretty clear that none of you wants to start from scratch again, least of all B J Rumbelow — he or she would have an awful lot of software to replace!

VIRGIN TERRITORY

Prepare for take-off. Virgin, already famed for its cheapo Atlantic flights is moving into just been released for the Speccy.

Single-handed you must defend a desert town as it comes under attack from wave after wave of deadly enemy helicopters. And they've a fearsome arsenal to use against you — missiles, flak batteries and radar jammers.

Virgin Games is convinced it'll be a runway success, so if you want more info on departure times give them a buzz on 01-727 8070.

Is it the Dutch entry for the Eurovision Song contents in a nasty tussle over the microphone? Nope, it's Jools Holland presenting the lovely Louise Stamper of Ultimate with a Golden Joystick Award. Perhaps it was in the category for the Most Secretive House Ever! We were beginning to think they were just a figment of our imagination.

FRONTLINES

VIVA ESPANA

If you're thinking of spending your summer holidays under the sun in Spanish climes, how about getting your Speccy to help you with the lingo?

The Spanish Tutor from Kosmos has been around for a while, but at £8.95 it provides a good range of basic vocabulary and grammar. Trouble is it doesn't give you much chance to 'play' with the language. Still, if you're interested, give Kosmos a ring on (05255) 3942.

Much more fun is Silversoft's *Linkword Spanish*, which uses the Gruneberg 'image to word' system; you're told, for instance, that the Spanish word for cat is 'gato' ... so imagine a cat eating a large piece of cake (gateau — geddit!). Priced at £12.95, you can find out more from Silver soft on 01-748 4125.

Soon to come is CDS's *Spanish Is Fun* which, priced at £7.95, promises to feature not only audio back-up but graphics as well! Give CDS an encouraging phone call on (0302) 744129 for more details. Buenas vacaciones!

YS brings you another scoop picture — Sir Clive's follow-up to the C5, the Sinclair aeroplane! It features a smart, functional design coupled with all the latest technology — wheels, for instance. What d'you mean, it's a bicycle? Oh, OK, the old biddy on the bike is actually *Super Gran*, 'cos Tynesoft is about to launch a game featuring the fearless granny. Just hope they fork out a bigger budget on the software than's been lavished on the hardware!

YS UNDER THREAT?

Deep in downtown Fratton, four enterprising pupils have started up a magazine called *CAS* (Commodore and Spectrum) *User.*

Present sales figures are peaking at 125 copies an issue which doesn't worry us too much yet — but from little acorns large computer companies have been known to sprout!

The problem is that *CAS* is very short of software for review and would appreciate any offerings. Any software they receive will be sold in aid of the Ethiopian Famine Appeal. So, readers and software houses, if you have any copies of spare software and want to donate it send it to: Mark Le-May, *CAS User* Editor, 45 Liverpool Road, Fratton, Portsmouth.

ADRIAN MOLE'S SECRETS REVEALED

19th April 1985

I found out today that my secret diaries are being made into a computer game. Can't say I'm very pleased as I haven't even got a computer. Maybe I can persuade Dad to sell the dog and buy me a Spectrum. I phoned Pandora to tell her about my wonderful plan but she wasn't impressed. She said I'd be selling my soul for software next.

Anyway, once the game's out I'll be dead popular, then she'll be sorry. I only hope they cut out the bits about my spots. I'd better phone Joe or Greg Lang at Mosaic Publishing Ltd on 01-226 4463 and find out.

Paperdata

The Hacker's Handbook
Longman Publishing/£5.95

The Hacker's Handbook
Century Communications/£4.95

The recent interest in Data Communications (or Comms as it's come to be known) is growing rapidly. This is partly due to the coming of Prestel and Micronet, and partly because it's now possible to lay your hands on some relatively cheap modems. But why should you shell out for one? The modems may be quite cheap but it can still be expensive if you spend hours on the phone to some remote computer.

All very confusing for the beginner but help is at hand. It comes in the form of an excellent book from Longman Publishing called **The Hacker's Handbook**. The authors, Geof Wheelwright and Ian Scales, start you off from scratch with a short discussion on why Comms is important. They then take you through all the different stages of communicating, from buying a modem to a complete run-down on how to use Prestel and other remote database systems. The style's clear and easy to understand and all of the technical jargon is explained in footnotes and in a glossary of terms. This really is an excellent introduction to Comms with a lot of good, and up to the minute, information.

The second book is also, rather confusingly, called **The Hacker's Handbook**, this time from Century Communications. Its aims, however, are completely different. Hugo Cornwall (and there's a made-up name if ever I've heard one!) sets out to show you how to 'hack' — to gatecrash into computers when you haven't been invited or when you haven't paid the entrance fee. To boldly go where no-one wants you and where you shouldn't be! Remember the hoo-ha about the Prestel hacker who broke into Prince Philip's private account? So far, the results of hacking haven't been too disastrous — no nuclear red alerts like the one in the film **Wargames**, or none we know about. But you must remember that hacking amounts to stealing, whether of information or computer time. Indiscriminate hacking can also cause damage which costs a lot to put right if the hacker manages to do something really 'clever' by accident.

The book does contain some very useful information, especially the chapter on radio communications, but I can't really recommend it. Most computers holding 'secure' data are very well protected and I just can't see the point in spending a fortune on phone bills trying to get into them. You'd be better advised to use the money to gain legitimate access to the computer. At least that way you won't have the police knocking on your door in a dawn raid!

Dave Nicholls

BLOOD 'N' GUTS

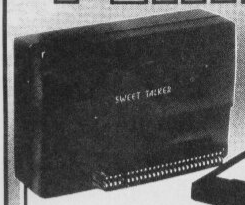

New software house, Genesis has released *Body Works*, a series of programs that explore the human body in gory technicolor. And who should be behind this vivid and original study of our bodily capacities? None other than doctor and Arts buff, Jonathan Miller.

As author of *The Human Body* 'pop-up' book, Dr Miller has already demonstrated his penchant for the unconventional approach to biology lessons. So it'll come as no surprise to *YS* readers that Body Works involves all sorts of games and simulations that allow you to romp around the digestive system, the brain or other interesting places. You can even simulate your own heart attack (*Who needs simulation? Ed*).

At £14.95, the package comes with a wall-chart depicting all the lurid bodily details you'll need to know. Medical advice will be given by Jemima Blackwell in 01-240 9541.

PERIPHERAL POWER

CHEETAH "SWEET TALKER"

Based on an allophone system, program any word or phrase, providing unlimited speech. Now make your Spectrum talk. Compatible with Interface I & II and Spectrum + ... **£24.95**

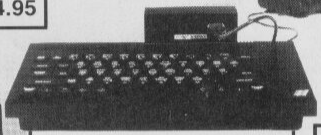

CASSETTE/DATA RECORDER

For your home computer, will allow easy loading of even the most stubborn program. Features include single key record, mains/battery, accepts standard computer leads and 5 pin DIN connector. Also provides exceptional audio quality for fine listening. (Batteries not included) **£24.95**

MEGASOUND

For 48K Spectrum and ZX Spectrum + Achieve amazing sound capabilities that your Spectrum has been lacking. Just plugs into the user port at the rear of your computer and amplifies sound through your T.V. **£10.95**

SPECTRUM JOYSTICK INTERFACE

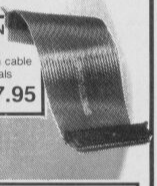

Simply plugs into the user port at the rear of the computer and accepts any Atari style joystick including Quickshot and Kempston. Comes without rear edge connector at **£11.50**

or with connector which allows other peripherals to be stacked up at **£12.75**

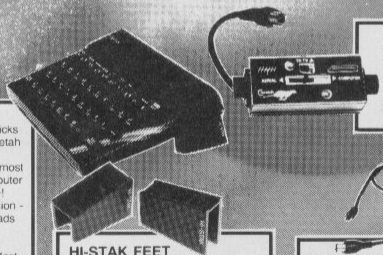

32K RAMPACK

Upgrade your 16K ZX Spectrum now! The Cheetah 32K Rampack simply plugs into the user port at the rear of your computer and increases the memory instantly. to 48K **£39.95**

56 WAY EXTENSION CONNECTOR

Cheetah's 6" long extension cable enables Spectrum peripherals to be distanced from your computer .. **£7.95**

AERIAL SPLITTER

Cheetah's neat splitter unit complete with self adhesive pad allows you to keep your T.V. and computer aerial leads plugged in without disturbing the picture **£2.25**

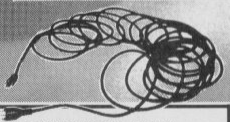

R.A.T.

Conventional joysticks are dead! The Cheetah Remote Action Transmitter is the most sophisticated computer controller available! Infra red transmission - so there are no leads trailing across the living room. Touch control, extremely fast, can be used with Cheetah RAT/ Kempston compatible software. Complete with receiver/ interface **£29.95**

HI-STAK FEET

These instantly applied stick on feet for your ZX 81, Spectrum, New Brain, VIC, TRS etc. tilt the computer and make your keys easier to see and more enjoyable to use, allowing smoother programming. **£2.99**

EXTRA LONG AERIAL LEAD

Over 15' long. Our super lead will allow you to sit back away from your T.V. and enable you to play games in the comfort of your armchair. **£1.50**

All Cheetah Peripherals have rear edge connectors for compatibility with all Sinclair accessories.

Prices include VAT, postage & packing.
Delivery normally 14 days.
Export orders at no extra cost.
Dealer enquiries welcome.
Cheetah, products available from branches of
John Menzies WHSMITH Rumbelows
WOOLWORTH Spectrum dealers
and all good computer stores.

FRONTLINES

RAINDROPS KEEP FALLING

They say it never rains but it pours! But we nearly drowned in the torrents of entries that came flooding down the *YS* Mineshaft for our April Showers Compo.

Remember we asked you to find the 61st room in Miner Willy's mansion. Well, it seems that there's hardly a person in the kingdom who didn't find it. Course, we did catch a couple of you — one of the 'wettest' entries came from **Steven Smithson** of Blackpool who wrote in, "I claim the prize for telling you where the 61st room is . . . in Dave Nicholl's head." Sorry Steve — that's where the room came from but it's definitely in *JSW* now! And we'd have thought that coming from Blackpool you'd have been the first to find it. We'll let **Gareth Morgan** of Great Sankey rhyme you into the secret

No problem finding April Showers,
No searching round for hours and hours,
It's really quite within your reach,
Climb up the rope above the beach!

As **A L Hodson** of Northfield wrote, where else would you expect to find a shower but when you're on the beach!

And now the moment you've all been waiting for — who's the lucky person whose name came out of the Ed's hat first? Well, our congratulations go to *J Blackler* of Lancaster — keep an eye out for a large package of 10 Speccy games in the very near future.

So, you all thought that April Showers was an April fool and then you found it wasn't (well, *most* of you found it wasn't). But hang on a sec, what have you just been doing with your time? We thought you'd got JSWitis months ago and here you are dusting down your copies and playing it all over again. Now don't you think that's just a little bit foolish?

HACKING AWAY

POKE fun into your games! Send your hacking hints to Andrew Pennell. Your Spectrum, 14 Rathbone Place, London W1P 1DE.

Welcome back, hackers. Straight into a game which really is the pits, *Monty Mole*. My ol' friend **Chris Wood** has been tunnelling into it for you. The game loads as a 48K block using up all the Speccy's memory, so entering the POKEs has to be done using a special loader. It's a long listing, so a short explanation's called for. First, it loads *Monty Mole* lower down in memory than it should be, leaving 1000 bytes in which to put a special loader. This gives Monty infinite lives, moves part of itself onto the screen, shifts what's left of the game back to its proper place, then runs it — phew, no wonder it's not short!

The data statements in the Basic program can be removed if you don't want a certain feature. Leave in the last line of 3 zeroes, though. Chris has also included a Game Abandon feature, using the G key. As this overwrites part of the scanning routine, the Basic asks which joystick option you want, and disposes of the other.

So, bash in the listing *Mole* fans and then save it to tape.

Load up the first part of *Monty Mole* — this will clear the screen — then stop the tape and reset your Spectrum. Next, load in the new loader

From one mighty megahack to another. **Piers Pettman** has caught Horace fever, sending us not just infinite lives POKEs but infinite POKEs! There are no less than nine to help you combat the alien arachnids in *Horace and the Spiders*. Off we go then, remembering to add 0 after each of the POKEs: no hills on the first screen — 25142, no spiders either — 28773, ropes are pulled in fast — 29626, jump onto next rope when you like — 29720, all spiders on the third level die instantly (*you don't believe in taking any chances, do you? Ed.*) — 30070, hills and more hills for the masochists amongst you — 25218, slow spiders on the third level — 29910, 'infinite' spiders on the third level — 30116, and if you're not too keen on the ropes being pulled on the third level try POKE 29626,52. If you still can't cope after that lot I suggest you forget the spiders and flush yourself down the plughole !

If you fancy a *Ski-ing* jaunt with Horace but have left your Green Cross Code book at home, try POKE 29009,0 which will clear the road of most of its traffic. You'll still have to keep an eye open for the ambulances.

Andrew Dawson's on the right lines with the POKEs he's sent in for *Stop the Express*. First you'll have to load the program and de-crypt it by MERGEing the first part pausing the tape and typing CLEAR 25999 and finally LOAD "" CODE. Next, do POKE 48111,201: RANDOMIZE USR 48096 and you're free to poke around. For endless lives do POKE 34464,183:POKE 34926,183:POKE 35257,0, for unlimited time do POKE 35780,0:POKE 39549,0 and to change the starting carriage number PPOKE 40673,0: 40674,0:POKE 40674,0: POKE49261,N where N is number 21 carriage. Be careful on this last bit though, as some values will crash it — the game not the train! When you're ready for the off, use RANDOMIZE USR 32768 and it's full steam ahead!

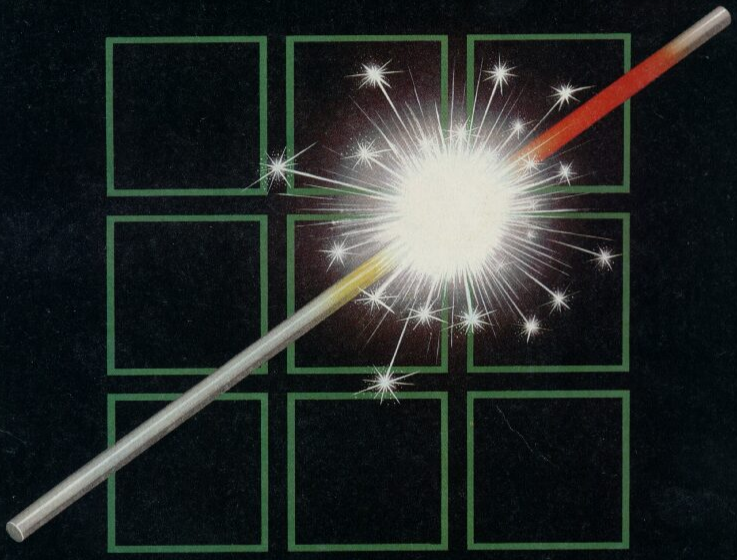

A final quickie from Andrew — if you're having trouble with *Arcadia* from Imagine (*remember them? Ed*) then POKE 25776,0 will make life a little easier.

I know how annoying it can be when you own a game that appears in this column and you just can't get the POKEs to work. A lot of you had that problem with *Frank N Stein*. Well, it seems there were two versions of the game and **Dave Leander**'s come to the rescue if you were unlucky last time — POKE 34124,0. It seems likely that Ghostbuster's got a twin too — any takers on that one?

Kent Sorensen from Sweden has ventured into Level 9's *Adventure Quest* to come up with a POKE that lets you remove any one problem from the game at a time. Simply press Break, then POKE 26388 with the room number you're stuck at, then CONTINUE. As he points out this is especially useful if you don't have the keys from location 18 to unchain the snowman. It's about time we had a few adventurous POKEs, so keep 'em coming.

INCENTIVE

CONFUZION

THE FUZION OF MIND AND MACHINE

★ SPECTRUM ★ SPECTRUM ★ SPECTRUM ★ SPECTRUM ★ SPECTRUM ★

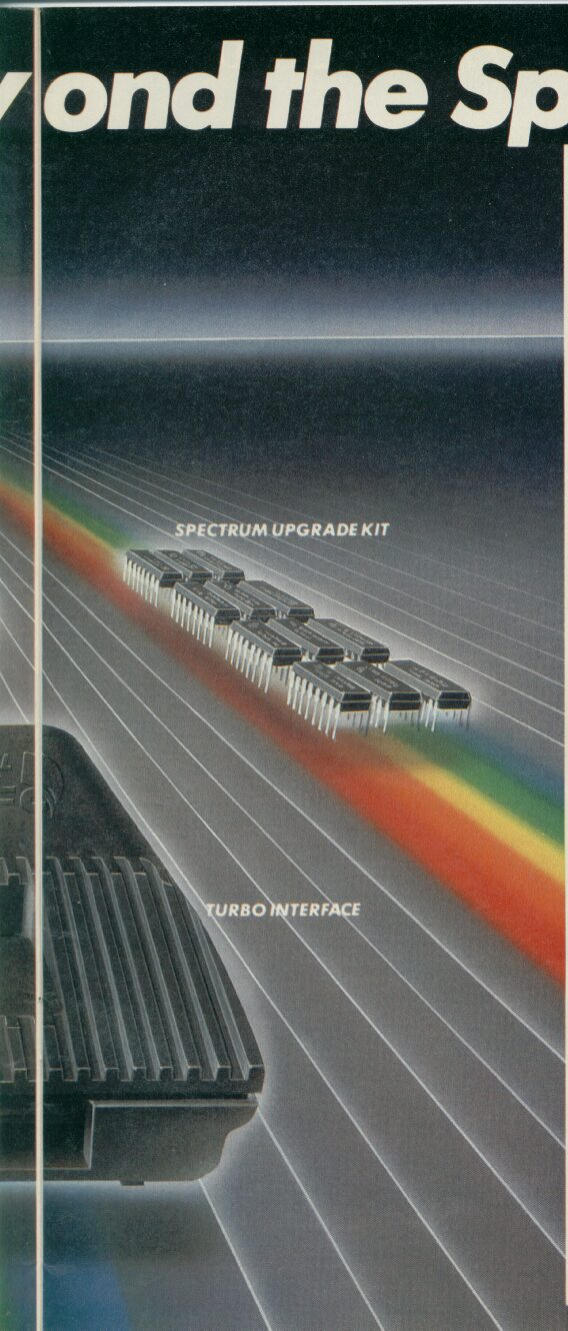

Price £6.95 Trade and Credit Card orders: Telephone (0734) 591678

INCENTIVE, 54 London Street, Reading RG1 4SQ

We'll take you bey

...ond the Spectrum.

Four great new add-ons from Ram, Number One in everything for the Spectrum...

TURBO INTERFACE

Our unique Turbo Interface outperforms any Spectrum interface – it works with ROM cartridges, 2 standard joysticks, and there's a full expansion bus at the rear. The Turbo supports Kempston, Protek and Interface 2 software and loads from cassette – or instantly from a ROM cartridge. It really makes the most of the Quickshot II's rapid-fire action, and with a unique built-in power safety device, it's amazing value at just £22.95.

QUICKSHOT II AUTO RAPID-FIRE JOYSTICK

The famous Quickshot II is the top games joystick, with a sleek trigger fire button for quick reactions, an auto fire switch for continuous shooting and a new, improved grip. Revolutionary built-in stabilising suction cups mean a sure, firm grip – a snip at £9.95.

SPECTRUM INTERFACE

Boost the power of your Spectrum, or Spectrum +. This Kempston-compatible interface gets the most from your games – electrify your enemies with real power and lightning-fast reactions right under your fingertips. Costs just £9.95.

SPECTRUM UPGRADE KIT

If you've a 16K Spectrum micro, this handy and inexpensive add-in kit boosts the RAM memory to a powerful 48K, so you can run the latest and greatest software, the most exciting games around – and expand your own programming possibilities! Only £21.95.

Where can you get your hands on Ram's amazing Spectrum add-ons? You can see them at branches of Boots, Menzies, Spectrum Group computer centres, and good computer stores everywhere. Or return the coupon below.

To: RAM Electronics (Fleet) Ltd (Dept YS), 106 Fleet Road, Fleet, Hampshire GU13 8PA.

·HARD FACTS·

From dodgy 'drives to suspect Speccies, Stephen Adams makes the connection — contact him at Hard Facts, Your Spectrum, 14 Rathbone Place, London W1P 1DE.

How I'd like to bring you nothing but good news! Very often, though, when the hardware starts playing up you'll just have to join the JB Club. No, not hitting the whisky bottle, though you may feel like it, but putting the damaged goods in a Jiffy Bag and sending it off to the experts without delay.

That's certainly my advice to **S A Tinkler** of West Kirby. He's had a whole stack of problems since he bought a Stack Light Rifle. After using it for only a day, his Speccy developed shooting pains and now all he gets on the VDU is a lot of flashing squares and lines. It sounds to me as though you've blown up both your Speccy and the interface by fitting them together incorrectly. Best bet is to send the interface back to the manufacturer and the Spectrum to TV Services of Cambridge for a quick repair.

Robert Stockton of Wirral wrote to me with a problem that's a bit out of the ordinary. He's got an old ICL 22SI video console that contains a monitor and rather than let it go to waste he wants to interface it to his Speccy. Mmmmm. I'd say that could be extremely tricky, if not downright impossible, without a circuit diagram. Try witing to ICL at Bracknell to see if they'll cough up the necessary and then approach your local TV repairman to see if he'll do the rest.

All I can say to give you some idea, is that you can get a Commodore video signal from the Video and 0 volts connections at the back of your Spectrum. Is that any help?

Next comes a long tale of woe from **Lewis Tyrell** of St. Leonards-on-Sea. You can probably guess where the problem lies because we haven't mentioned them yet and it wouldn't be Hard Facts without something amiss with the Microdrives! Briefly stated, he keeps on getting a variety of error messages. Just to take one example, typing CAT 1 just brings up a question mark and the syntax error message. And he knows the power's getting through because the LED light flashes on.

Well, it's still the connections between the Interface 1 and your Speccy. You'll usually find in such cases that the power functions OK because it's connected on either side of the keyway. However, the ROM's just not switching itself on when the extra commands are used which explains all the error messages you describe.

A lot of people also don't realise that the Interface 1 takes a minute or two to warm up before it's ready for proper action. So, before you enter any commands, just give it a while to get the old circulation going, especially if you're in a cold atmosphere.

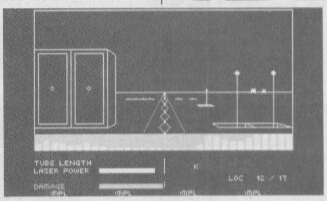

Well, that's it for another month, but if you're having hassles on the hardware front, just drop me a line to Hard Facts, Your Spectrum, 14 Rathbone Place, London W1P 1DE.

FRONTLINES

LOST IN SPACE?

Imagine drifting aimlessly in space, trying to find a stable orbit in a solar system you recognise. This is the 'new' plot that's been dreamed up by those great money-spenders at Legend for its new game, *Komplex*.

As yet we haven't been told how many hundreds of thousands of pounds it's cost to put this one together, but you can always ask the company on 01-524 8324/5.

FROM THE H/P

Are you hopeless with headerless files? Me too. I've been receiving a fair number of calls asking how to load and save headerless files, so I thought it was about time I got out of my comfy chair and found out.

After a quick consultation with our ol' friend Tony Samuels I finally got it sussed. Firstly, if you want to save a headerless file in machine code, load the A register with 255. This is to signify that you're saving a block of data and not a header. Then load IX with the start location of the block of code you intend to save. Still with us? Good. Now load DE with the number of bytes that you want to save, then CALL 04C2h, and RET brings you back to Basic. Complicated, innit?

Here's an example if you're feeling a bit overwhelmed. Say you want to save a screen pic without a header, then your assembler listing would look something like this:

```
LDA,255
LD DE,6912d
LD IX,16384d
CALL 04C2h
RET
```

Now to re-load the screen pic you've just saved, the code reads as follows:

```
SCF
LD A,255d
LD IX,16384d
LD DE,6192d
CALL 0556h
RET
```

The parameters here are the same as when you're loading, except for the SCF command which sets the carry flag. If we didn't set the carry flag, the program would just verify instead of loading. If you want to do a headerless verify, just swop the SCF command for an AND A instruction. Right, I'm going straight back to the armchair after that lot.

Someone who wants to retain a touch of mystery called in anonymously to ask how to round up figures to two decimal places. This is one I can figure out for myself — just put your variable (in this case A) through this equation after every evaluation:

```
LET A=INT (A*100)/100
```

That'll move you two places to the left, strip off anything on the right-hand side of the decimal point and then move the variable two places back to the left.

A S Hampson of Derby gave me a bout of verbal violence about the Big Deal! program in our April issue. He hadn't a clue what we meant by 'clear space above 8000hex'. Sorry about that — even we nod off at times *(Wakey, wakey, Peter! Ed)*. What we really meant was for you to perform the command CLEAR (address) which is 8000hex in this case.

Not being the most practical of people, I'm not really the person to offer advice on the next problem. **Giles Harpenden** of Ashford, Kent wants to 'up-grade' his Speccy into one of those nasty QL-clones! What's worrying him is the prospect of wielding the soldering iron, so should he spend the extra tenner and send it off. My advice is solder on — take the money *and* open the box! All that's needed is a couple of dabs of hot solder to fix the resistor. If you want some practice perhaps you should have a test run on one of those cheapo electronic project kits. If you can get one of those up and running, you'll have no trouble with a dinky little resistor. But then as I say, I'm not really the person to ask — I love my Speccy just the way it is!

Finally, here's a chance for all of you who find our usual compos too hard. All you have to do to win an 'I Beat Pete' certificate is to baffle me with a *sensible* question about the Speccy and its related soft and hardware. Now that can't be too difficult, can it? To enter the Troubleshootin' Pete Question Challenge, all you have to do is send your question to me on a postcard along with your name and address. The address is The Troubleshootin' Pete Question Challenge, *Your Spectrum*, 14 Rathbone Place, London W1P 1DE. We'll print the best ones to beat me *(and could he do with a good beating! Ed)*.

Still, if you've got a problem that requires instant action, you can always catch me on the lines!

Troubleshootin' Pete

Pete's phone lines are open from 10am-1pm and 2pm-5pm on Wednesdays and Fridays. Ring him on 01-636 2416.

TRANSFORM LTD. Business Software

Are you taking your Spectrum seriously?

£69.95
plus
£2.00 p&p

The Transform Keyboard transforms your Spectrum into a fully operational professional machine.

- Will incorporate micro-drive interface and power supply
- 60 keys including fullsize space bar
- Large ENTER key
- Full stop, comma, semi-colon, colon, single delete and edit keys
- On/off switch with LED
- Easy installation – no soldering required
- Black anodised case
- Now with 3 colour printed key tops
- EMODE key

"Its price of £69.95 reflects the kind of use to which it will be put but it is certainly the top keyboard at the moment."
SINCLAIR USER JUNE 1984

Business Software

Business Bank Account £10.75
This program will enable you to enter debits under 17 different subheadings. Statements include totals of all subheadings.

Sales Day Book £10.75
For all your invoices, this program will enable you to prepare statements of outstanding invoices. Program will also calculate VAT.

Purchase Day Book £10.75
Keeps a complete record of all your purchases under 17 different subheadings. This program also calculates VAT.

Business Pack £25.00
Including all the above programs.

Stock Control £10.75
Handles 900 lines, including details of supplier. Program has full search facilities enabling you to search and update all lines from one supplier.

Invoicing £15.00
This program will print out invoices, calculates discounts and VAT. The program will calculate totals from unit prices. Up to 50 accounts with 250 outstanding invoices.

Word Processing by Tasman **£13.90**
Tasword Two is a powerful word processing program that will perform all the functions available on large processors. The program will give you 64 characters per line on screen.

Masterfile by Campbell Systems **£15.00**
This is one of the best database programs available for the ZX Spectrum. This program has many uses in a small business.

Dlan by Campbell Systems **£7.95**
Use your Spectrum to sell your products. Dlan will display messages in up to 11 different typefaces. Will scroll text in any direction.

64 Column Generator by Tasman **£5.50**
You can use this program within your other programs to display 64 columns on screen.

Payroll by Byte One **£19.95**
This payroll program will handle up to 40 employees and will calculate NIC, PAYE, superannuation and many other deductions. This is a very user friendly program and extremely good value.

NEW

Sales/Purchase Ledger Invoicing £25.00
This program is for use on micro-drive only. The program will print an invoice using a built-in price list and post the invoice to your customer's account. Will also print price lists, statements, labels etc.

Tasmerge £10.95
Allows you to transfer data from Masterfile into Tasword enabling you to use Tasword for mail merge. The program allows you to specify line and column of each field. For use on micro-drive only.

Superfile £14.95
This is a new database program that stores pages of text 64 columns x 22 rows. The program includes word processing and full search facilities.

Omnicalc 2 £14.95
This is the long-awaited micro-drive version of omnicalc complete with histograms and many other features.

Projector 1 £13.90
Business graphics program that will help you present your cashflow, sales expenditure in many different ways including pie line, and histogram charts.

Tasprint £9.90
Use this program with Tasword Two to produce 5 different fonts on a dot matrix printer.

MF-Print £6.95
Enables you to set a print format for your full-size printer within masterfile. Supplied complete with masterfile for **£19.95**.

Trans Express £9.95
Micro-drive utility program which will enable you to backup all your micro-drive cartridges.

Now in stock

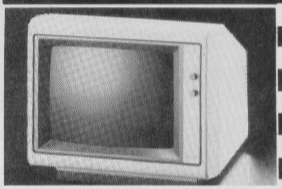

Blank micro-drive cartridges	£4.95
Continuous paper	£12.99
Printer ribbons from	£3.50

QL

Centronics Interface	£39.95
QL Dust Cover	£5.00

Transform can supply a wide range of printers, monitors, and leads for the QL. For further details send S.A.E.

Monitors

It is possible to connect your Spectrum to both Black/Green and composite Video monitors using high resolution monitors are particularly useful with programs like Tasword that use 64 columns. We supply complete instructions on how to connect monitors to both Issue Two and Issue Three Spectrums. These monitors can also be connected to your QL.

Phillips black and green	£75.00
Kaga/Taxan black and green	£99.95
Sanyo Med res for QL	£273.60

Printers

All the software we supply runs on full-size printers (unless you are using interface 1) you will require an interface to connect your Spectrum to a printer, the interface we supply uses the graphics characters to set printer codes as in Tasword and prints a double size screen dump.

Centronics/RS232 Interface	£45.00

Dot matrix printers

Brother HR5	£132.00
Brother M1009	£163.00
Star Gemini 10x	£199.00
Epson RX80 FT	£229.00
Epson FX80	£324.00

Daisywheel printers

Smith-Corona TP I	£189.00
Silver Reed EXP500	£284.00
Brother HR15	£349.44

Please add **£5.00** delivery plus VAT to the price of printers and monitors. All software prices include VAT, post and packing.

FREE SOFTWARE FOR LIFE!

New Gold Star life membership of The Software Library is your key to a vast treasure trove of tapes costing up to £18 each. They are yours whenever you want them, three at a time... and a full week's rental won't ever cost you a penny in hire fees!

Only the original Software Library has the resources to make such an amazing offer—free software for life! Our ten megabyte computer ensures fast service; our illustrated, descriptive catalogue makes it fun to choose from over 80 top arcade games, 124 Adventures, simulations and other games, and over 120 great utilities and serious applications; 65% are for the Spectrum, the rest divided between Commodore 64 and ZX81. New releases are constantly being added.

Joining this money-saving scheme **should** cost you £24; as an introductory offer, you can join this month at **half price**— £12. From then on, you can take away three tapes from our shop whenever you wish; or if you order by post, all we ask is 30p post/packing per tape. The rental is perfectly free in either case.

What's more, you can sell your surplus software to other members (we have over 5,000!) and recoup the cost of membership in no time at all. We offer huge discounts on peripherals and tapes... and so much more. Phone us now on 0730 892732, quoting your Access number, or return the coupon without delay!

GUARANTEED to save you more than any other software library scheme!

SOFTWARE LIBRARY FARNHAM ROAD, LISS, HANTS GU33 6JU

Please enrol me at the introductory offer, and send my membership pack by return.

YS GO FOR GOLD

If you're an all-time great games player, you could be in line for a medal. Go for it now — it's gold!

It's all change on the *YS* chart this month. We've only had room to squeeze in the Top 10 because we want to tell you about how it'll look next month.

First off, there'll be two charts. One will be the *YS* Top 10 All Time Greats, the games you'll keep on playing for as long as the joystick holds out. The other's the *YS* Top 10 Hot Shots — the chart that'll bring you bang up-to-date with what you're buying now. And of course, we'll still need your votes for both of them because now they're going to be even more *your* charts.

Along with your votes for the All Time Top 10, send us your top score and a passport sized photo of yourself. If you make it into the top three you'll not only get your piccy printed but you'll be in the running for a *YS* Games Gold Medal. We'll be dishing those out to the all time top scorers at the end of the year. Of course, what we don't want are any hyped or hacked high scores. You'll be found out when we invite you to the *YS* Games Stadium for the final play-off.

If all's not yet clear to you, look at the coupon and you'll see how to fill it in. And remember what a wacky bunch we are at *YS* so send us some funny photos — you can't all look like convicts, can you?

YS Chart Challenge

My top 5 all-time greats are:

1 .....
2 .....
3 .....
4 .....
5 .....

My top scores are*:

1 .....
2 .....
3 .....
4 .....
5 .....

*You don't have to fill it all in but make sure you specify the level of difficulty for your scores.

The next games I'm gonna rush out and buy are:

1 .....
2 .....
3 .....
4 .....
5 .....

I'm going for gold! My name is:

.....

Address.....

.....

..... Postcode .....

Independent Witness

Name.....

Address.....

.....

..... Postcode .....

If you're going for gold, stick your mugshot here

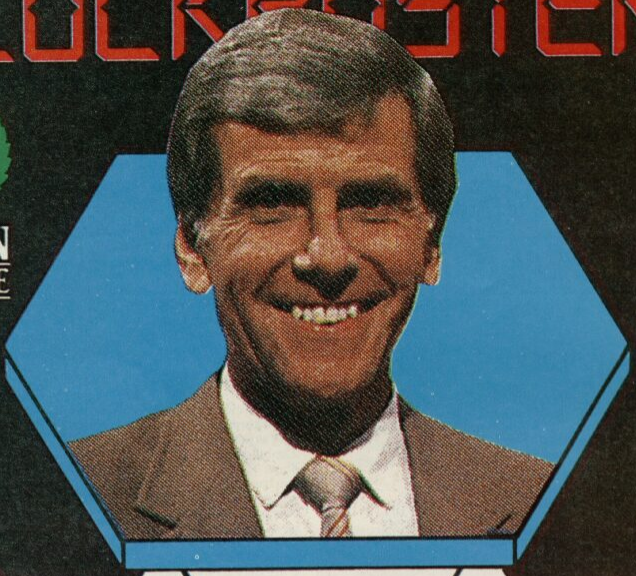

Now ask an independent witness to sign the coupon.

Complete this coupon and send it to Go For Gold, *Your Spectrum*, 14 Rathbone Place, London W1P 1DE. Make sure you send us a black and white photo of yourself if you've filled in your high scores.

SAVE AS YOU LEARN

I've just been reading A J Unwin's article, Microdrivin' in issue 13 and it struck me — how about reserving lower case for the names of programs and upper case for the names of code files, screen$'s or data? Also, Toni Baker's Big Deal program in the same issue could be saved as 'CARD 36102'. That way you should remember to CLEAR 36101 before loading. Pretty good, eh?

Christopher Hopson
Wareham.

Not bad, not bad. Keep those programming tips coming. Ed.

PENSIONED-OFF PROGRAM

As the programmer of the Quicksilva game, *Xadom*, I wish to take issue with your description of it as 'slightly geriatric'.

Wot d'ya mean, 'slightly'? It was written over *three* years ago. Let's have some respect for your elders. I prefer to call it a 'brazen oldie'.

Mike Moscoff
London NW3

OK, from now on read 'slightly geriatric' as 'pension-drawing program, that ought to have been packed off to a home aeons ago.' Happy now Mike? Ed.

LIFE AFTER JSW?

After all those boasting letters you at *YS* must have received over the past couple of months, I've got really great news! I've absolutely *no idea* where April Showers is in *JSW*. In fact, I must be the only Speccy user in the entire universe *not* to have *JSW*. Now doesn't that make you feel better? (*Yeeeah! Ed.*).

The reason for all this? Simple, there aren't that many retail outlets here on the moon!

Thomas 'Erauqs' Smith
Recently transported to Earth's little satellite.

I think the next move you'll be making, Thomas, is off in a padded van assisted by two gentlemen in white coats! Ed.

PRICE HIGH, NO LIMIT

YS has gone up again and not just in my estimation, so I've written a short poem in your dishonour!

Your Spectrum is a great magazine,
It's the best one I've ever seen.
Written by my heroes ("that's us" I hear you cry),
But when I saw the March issue, I could but only sigh.
It seems that good ol' Nigel has gone to your brain,
you've gone and put the price up — are you insane?
Perhaps you should state on that glossy cover of yours,
'Price High, No Limit — just watch how it soars'.
I hope I've made the point that I'm a penniless peruser,
So, if you don't do something quick, I'll switch to 'Sinclair Loser'!

Neil McClements
Co. Down, N. Ireland

OK, Neil, you've had your moan
Now on yer bike and push off home!
YS is brill for 95p,
Who else would print that verse for free.
(PS. Does this make me a Po — Ed?)

UNLUCKY BREAK

In *YS* issue 13, I was lucky enough to have my letter on connecting the Speccy to a Brother M-1009 Printer chosen as the Star Letter. Thirteen still proved unlucky for some though — you slipped up while transferring the diagram to the printed page. So, here is the list of pin connection numbers as they should have appeared.

Interface 1	**2 3 4 5 7 9**
Brother M-1009	**2 3 20 5 7 6**

Of course, I don't expect this to be the Star Letter again!

David Poole
Stevenage

Good, 'cos it ain't. But thanks for putting us right and let's hope that everyone can now make the right connections. Troubleshootin' Pete.

HOBBIT HACKING?

In a recent Hacking-Away column, Richard Glass asked for some POKEs for *The Hobbit* so he can see the final screen. Well, there's not really one at all, only a bit of blurb saying that 'You're a Master-Adventurer, and a group of elves, etc. carry you away on their shoulders.'

So Richard, if you want to be carried shoulder-high by elves, take a look at Spectrum Adventures in *YS* issue 9. It gives you all the help you need.

Darren Bates
Burwell, Cambs.

Rumours are coming through that Tony 'Slim' Samuels is near to completing The Hobbit *— if it's true then a lot of elves are gonna be in sore need of medical attention. Troubleshootin' Pete.*

ON YER BIKE

Here's a possible solution to why Sir Clive's souped-up plastic bucket is called the C5. A friend of mine was browsing through a Z80 Assember reference when it struck him that C5 stands for 'Push BC'. Sounds a bit like Push Bike to me. What do you think?

K Peel
Brighton

Well, there's a thing! It does to us too. Pretty appropriate as well, since any ideas of powered propulsion soon give way to pedals and pushing — usually off cliffs. Ed.

POKE CURTAIL

In April, someone wrote in with a quick solution to the 'line 0' problem. I've got an even quicker solution, a single POKE.

Just enter (after loading the header or whatever) POKE 23756,1, and Bob's your uncle! (*My uncle ain't called Bob. Ed.*). To make the first line of your program line zero, just enter POKE 23756,0.

As a bonus, here are some other useful POKEs:

POKE 23658,8 Turns CAPS-LOCK on. Just POKE back to zero to turn off again.
POKE 23755,100 Disables List command. POKE to zero to re-enable.

On the subject of software protection, how about the idea of software houses putting a bar code on the side of the package, and then producing cheap light pens to read off the code at the beginning of the program? The bar codes can't be redrawn by hand very accurately, and if they were printed red on black they wouldn't photocopy very easily either.

Jasper
Bristol

How cheap's a cheap light pen? Software's dear enough already without adding to the expense. Ed.

ON THE BLOWER

Here's a cautionary tale for all *YS* readers. I bought Cambridge Microelectronics' PROMER 815 programmers for the Spectrum a few weeks ago to program 2716 and 2732 EPROMs, but when it came, it didn't work despite what it said in the ad. After an hour or so checking the circuit, I found a dry joint which I resoldered. To program anything other than 2716 EPROMs I had to desolder 4 wire links and resolder them in different positions. Obviously, after 3 or 4 solderings the circuit board pads would come off, so I sent it back to CAMEL and asked them to supply me with a kit of parts. That way I could construct the programmer myself, incorporating switches

YS TRAINSPOTTER AWARD

I'd like to claim my *YS* Trainspotter Award. I was looking at the brill spread you did on *Alien 8* and I couldn't believe my eyes. Lined up, with the astronauts in the activation chamber was none other than — Sabreman. I rushed to my Speccy and loaded up *Alien 8*. Then I raced off to the right room only to find that he wasn't there. Now either you've got a dicky copy or you're pulling a fast one. Please let me know because I've hunted all over the spaceship and I can't find any trace of him.

Brian Butler
Rugby

Us? Pull a fast one! Whatever next. We've even heard rumours that if you play Alien 8 *whilst there's a full moon the Werewolf puts in an appearance. If you spot him, let us know. Anyway Brian, your eagle eyes have won you a coveted Trainspotter Award. Keep on spottin'. Ed.*

THE FABULOUS CASSETTE 50 FROM cascade

ONLY £9.95 (INC P&P and VAT)

VALUE that's out of this world

SPECTRUM 16k/48k or +

'Incredibly frustrating!' – that's the verdict on Cassette 50's FROGGER. Satisfied users tell us it's one of the most challenging you'll find – it's almost as good as the arcade version! CARGO has you trying desperately to complete your helicopter mission under attack. Plus 48 other tactical, logical and adventure games featuring multi-coloured and user-defined graphics, scrolling and full use of the Spectrum sound capabilities.

50 GAMES ON ONE CASSETTE

Datapen

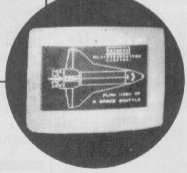

A QUALITY LIGHTPEN
for use with the SPECTRUM computer

The DATAPEN lightpen enables you to create high resolution pictures and technical layouts directly on your T.V. screen. The accompanying software allows you to draw any shape or *filled area* you wish, to *pixel accuracy*, in full colour and the results may be utilised within your own programs, e.g. for animation, or to illustrate your title pages. At just £29 inclusive, the Datapen lightpen package represents superb value – just look at the actual screen photographs and you will agree that this must be the best value for money on the market.

PLUS: 3 SOFTWARE PROGRAMS

- Routines and ideas for your own programs. (Menus, games, music, etc.)
- User-defined graphics creation program.
- Superb full colour drawing program as illustrated in these actual screen photographs.

- Incorporates features not provided with other pens.
- Push button operation on pen – no need to use keyboard.
- Works under any lighting conditions.
- Plots to pixel accuracy.
- 20 pre-defined commands allow plotting of geometric shapes, including triangle, lines, circles, etc., text, or user-defined characters.
- Uses all paper and ink colours.
- A screen grid may be turned on and off, at will, to assist drawing.
- Flexible erase capability.
- All drawings can be saved to tape for further use.
- Plugs in direct – no batteries, additional components, or adjustments needed.
- Handbook, plus printout of routines for use in your own programs.

Send cheque or P.O. for £29.00 to: Dept. SU1 or ask at your local computer shop. Send S.A.E. for details.

DATAPEN MICROTECHNOLOGY LIMITED, Kingsclere Road, OVERTON, Hants. RG25 3JB 0256 770488

Lightpens and software are also available for BBC B, Dragon, CBM-64 and VIC-20.

to change between EPROM types. They did this reluctantly, saying that more often that not, people made a hash of building kits!

Well, I didn't — and started programming. The thing worked fine with 2716 EPROMs, and 30 hours of hard work later I found out it was all down to faulty software. The machine code driving the programmer took no account of the differing programming requirements of the 2716 and 2732 EPROMs. I've now rewritten their machine code driving routines so I can program my EPROMs without error. What do you think? CAMEL just aren't interested.

C R Lister
Walton, Staffs.

Well, perhaps they will be now. Keep watching these pages. Ed.

MAKIN' IT SAFE

Here are a few software-protection pokes that might be of interest to my fellow Speccy owners:

POKE 23613,82- Disables the break during program execution. (If RUN, CLEAR, GOSUB or RETURN are used it must be re-POKEd as these commands upset the value)

POKE 23613,84- Enables the break key

POKE 23756,0- Line zero

POKE 23755,100: POKE 23756,0- This will renumber the 1st line of a program to line number 25600 (PEEK 23755*256) + PEEK 23756) making it unlistable (could be used to hide clues in an adventure etc.) and unrunable unless called by its exact line number eg. GOTO 25599 will not work if the line number is 25600. If this is used the program containing the hidden line becomes unmergable if saved as a "LINE"

POKE 23570,10- Disables the edit key

POKE 23570,16- Stops the program being listed everytime the enter key is hit

POKE 23760,X- POKEs the character X into the first character after a REM in a first line. In this way m/c can be poked into a REM statement. POKE 23659,0 (the old favourite) — Crashes the Speccy during loading or running of a program if the break key is hit

SAVE "BASIC PROG" CODE 23552,1500- Saves a basic program as though it is m/c and if POKE 23613,0: POKE 23613,0: SAVE "BASIC PROG" CODE 23552,1500: GOTO n (where n is the line the program is to run from) the program will be loaded as if it's m/c (LOAD "BASIC PROG" CODE must be used) and it'll auto-run once loaded. If the break key is hit during loading the Speccy will perform a system reset.

So that the program doesn't reset the Speccy if the break key is hit the first line of the program should contain POKE 23613,84 of POKE 23613,82 (see first two POKEs).

Damien Murphy
Co. Wicklow, Ireland

Wow! Ed.

IDIOTS' GUIDE

OK, I admit it. I don't know a thing about machine code, Hex or 'nasty black hole thingies', so please, creep, crawl, could you, grovel, grovel, write for us dim-whits, *(Now you're talking! Ed.)*, a hex loader that will enable all past, present and future Hex programs to be enjoyed by even more people, even Tottenham supporters. If this could be done I'd even go as far as to say that Ed's comments *are* funny *(Careful. Ed.)*, T.P. is as brilliant as he says he is *(Watch it. TP)*, and that Captain Critical deserves a good smack in the peripherals for being such a smart ass (I would have preferred to spell that differently) *(Such talents — spelling as well, eh? Ed.)*.

Keep up with the good work (note: still more creeping), and make a few more of us Basic idiots happy.

From a complete nutter with a name too rude to print
Bury St Edmunds.
Suffolk.

My mum always told me not to talk to strange men . . . oh, well. Unfortunately, some Hex dumps need specialised loaders with checksum facilities, etc. I suppose that it could be done with a menu driven program, but we haven't got one to hand, so it's up to the YS readership to come up with the goods. TP.

ON THE CARDS

For all *YS* readers who've typed in the Big Deal program from the April issue, I've come up with another great game that makes use of its machine-code card printing routine. It's called Chancer. The game itself is quite straightforward and full instructions are included within the program.

The card routine should be saved just after the program and it'll be loaded automatically by it.

David Gent
Newcastle-on-Tyne

It sure looks like a great deal to us. Ed.

PiC'N'MiX!

Pick up a handful of your old screen pics and mix them together to create some stunning new visuals.* Chris Somerville *sketches out the possibilities.

All the graphics packages on the market have one thing in common; the large amounts of time and effort it takes to create a decent picture. Like me, you'll probably have a fair-sized library of picture screenS, each one representing several hours of careful work. But to save time, there must have been occasions when you wished you could incorporate an existing screen dump into your current masterpiece without starting from scratch.

Well, now you can. This program allows you to combine any two pictures that you've previously SAVEd by SCREEN$. The resulting mix can produce some very unexpected and unusual effects. And even if the finished product's not quite the masterful mosaic you'd hoped for but a bit of a mess, you can always feed it into a standard graphics program for re-touching.

And how about adding titles to your pictures? Say you've drawn a picture of Castle Rathbone — a flourish of gothic script could make all the difference.

So, if you're in the mood to add moustaches to your Mona Lisas, then you'll have some fun with this program.

Mix those Pix

It's a tall order to fit all of the Signs of the Zodiac onto one screen. And it would have been impossible to draw each sign straight on to such a small area. To get round the problem the pictures were designed individually at full screen size, then shrunk and finally combined using this program.

The first picture is LOADed after the program is run and stored above RAMTOP. It'll then ask you to LOAD the second picture.

On the second screen you have the option of retaining the original attributes (INK and PAPER colours) or mixing the two pics in a standard INK and PAPER setting. You'll probably find that more often than not the second option gives the less confused result but it's really up to you to experiment!

Once the second picture's LOADed you can watch as the two are mixed on screen. You're then free to SAVE your new creation or tinker about with it to get the most spectacular results.

This easy-to-use program is compatible with both the 16K and 48K Speccy. Once you've typed it in you can SAVE it using SAVE "picturemix" LINE 40.

```
 10 GO TO 40
 20 LET aflag=1: PRINT AT 20,0;
" CHOOSE PAPER AND INK COLOURS":
 INPUT "PAPER (0 to 7)?";p$;"IN

Once you've finished mixing your pics remember to re-establish RAMTOP otherwise you'll receive an OUT OF MEMORY or RAMTOP NO GOOD error. After the program has stopped you can restart by: CLEAR 32599: RUN (for 16K users) CLEAR 65367: RUN (for 48K users)

New - the official Spectrum Upgrade!

Turn your Spectrum into a Spectrum + for just £20

- Professional full-size keyboard – includes 17 extra keys.
- Responsive typewriter-style action.
- Accepts all current Spectrum software and peripherals.
- Complete with 80-page User Guide and Companion Cassette.

Here's some exciting news for 48K Spectrum owners ... the official Spectrum Upgrade Kit.

The £20 Kit has everything you need to turn your Spectrum into the stylish new Spectrum +. You don't even need an understanding of electronics, just the ability to solder a few wires together! The leaflet in the kit gives clear, step by step instructions.

If you're not sure about doing it yourself, don't worry. Simply return your 48K Spectrum to Sinclair and for £30 we'll upgrade it for you .

Whichever you decide on, you'll also receive the new 80-page User Guide and Companion Cassette.

The bigger, better Spectrum keyboard

The Spectrum + measures 12½" x 6". It has a large typewriter-style keyboard, with hard, moulded keys.

You'll find the new keyboard has a smooth, positive action – ideal for touch-typing, word processing, simulation programs, and extended programming sessions. Two retractable legs give a perfect typing position.

There are 58 keys in all, including 17 new keys. Programmers will be pleased to see dedicated punctuation keys, a space bar, and separate shift keys for graphics and extended modes. And a reset button allows you to clear a program from your computer's memory without disconnecting the power supply.

The official Spectrum Upgrade

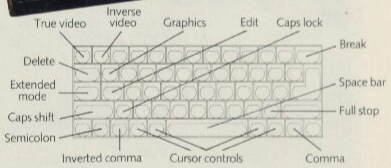

Naturally your upgraded computer will accept all the peripherals in your Sinclair system-Interface 1, Microdrives and so on-as well as all Spectrum software.

Just as important, new Spectrum software and peripherals will be designed with the Spectrum + in mind. So the Sinclair upgrade adds stylish looks, new capabilities ... and new potential for the future.

Included – the new Spectrum + User Guide and Companion Cassette

The new User Guide has over 80 pages of information, including a handy BASIC dictionary. The Companion Cassette provides an interactive tour of the new keyboard, and includes three entertaining arcade games.

TO ORDER BY MAIL:

When ordering the Upgrade Service, send off your 48K Spectrum to the address below, carefully wrapped, together with the completed coupon and appropriate payment. (Please do *not* return the mains adaptor, manual or other ancillaries.) Your upgraded computer will be despatched to you within 10 days of receiving your order.

When ordering the Upgrade Kit, simply complete the coupon, enclosing the appropriate payment and post it to us at the address below. Please allow up to 28 days for delivery.

BY PHONE: Access or Barclaycard holders can call Camberley (0276) 685311 for personal attention, 9am to 5pm Monday to Friday. Only the Upgrade Kits can be ordered by phone.

Please note: the upgrade offer applies to working 48K Spectrum models in the UK only.

To: Sinclair Research Limited, Upgrade Dept., Stanhope Road, Camberley, Surrey, GU15 3PS.

All prices include VAT, post and packing, User Guide and Companion Cassette.

☐ Please send me the Spectrum + Upgrade Kit. I enclose payment of £20.

OR

☐ Please upgrade my 48K Spectrum for me. I enclose my computer together with payment of £30.

I enclose a cheque/postal order payable to Sinclair Research Limited for £_____

OR

Please charge my Access/Barclaycard no.

MASTERMIND

The lights go down as you sink into the* YS Mastermind *chair — but the questions you answer are as tough as you want to make them.* Chris Winterton *has come up with a program that'll test you to the limits and make all your exam revision FUN!

Oh, groan! It's exam time again. But even worse than the exams is the revision beforehand — trying to cram the cranium with more information than it was designed to hold. Everyone's got their own way of revising for exams. Perhaps you follow the most popular method — put it all off till the night before and hope that natural ability or divine intervention will see you through. Or if that's a bit slap-dash, do you start at the beginning and plough through to the end and still find that you're faced with blank paper and a blank mind on the big day?

Either way, you're probably not having much fun at the moment, what with working or worrying about not working. But now all that's gonna change. This program lets you revise at your own pace and in your own way. And best of all, it won't be all slog any more. Even better, you don't just have to stick to chemical formula or French verbs. What about practising your pop knowledge or kicking your fave footie teams around. Even better you can now create your own Mastermind quiz questions to torment the whole family.

EDUCATABASE

All the information you could ever need can be stored on your Speccy — if only you were allowed to carry it into the examination room! So the problem is transferring all that info to your very own portable database, your brain. That's where this program comes in. Type in all your questions and their answers or better still get someone *else* to type them in for you. Short questions and answers are best though you can go up to two lines if necessary. And remember your computer is very precise so you must answer the questions in exactly the same form as they were typed in initially — if you did it in lower case first time, do it that way all the time. You'll soon find out how best to use the program by having a go at the demo. Now I've started, so away you go and finish!

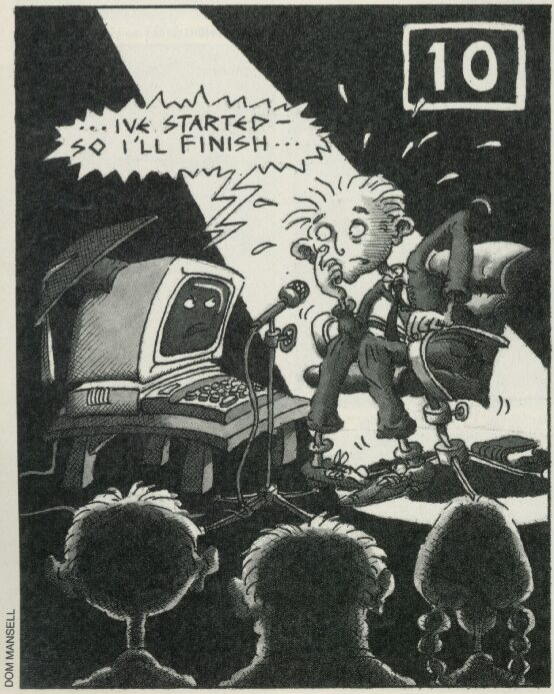

You may not have to be a mastermind to answer the questions but it's the best way of discovering just how flexible this program is.

★ NOW AVAILABLE FOR THE AMSTRAD CPC 464!!

WIN THE POOLS?

SPECTADRAW 3 – THE LATEST VERSION OF THE ORIGINAL AND BEST POOLS PREDICTION PROGRAM FOR THE 48K ZX SPECTRUM!!

AND NOW . . . AMSTRA-DRAW – THE FIRST POOLS PREDICTION PROGRAM FOR THE AMAZING NEW AMSTRAD CPC 464!!

- Supplied with Database containing data on over 10,000 matches since 1980!
- You update the Database each week – but no tedious typing, as team and division names already in program!
- Errors easily corrected – the program even checks your entries!
- Comprehensive instruction manual and menu driven program – easy to use, even for a newcomer to computing!
- Will forecast the least likely draws for those who prefer to bet on fixed odds!
- Built in perm generator – complete your coupon direct from the screen!
- Fully microdrive compatible! (Spectadraw only).
- Compatible with Currah Microspeech – the first pools program to read you its predictions! (Spectadraw only).

Spectadraw 3 for the 48K Spectrum.....£9.95 inclusive
Amstra-Draw for the Amstrad CPC 464 .....£9.95 inclusive
(Cheques/P.O.s payable to B. S. McALLEY)

We dispatch every Monday with the database made up to include all matches up to the date of dispatch.

SPECTADRAW (Dept YS), 1 Cowleaze, Chinnor, Oxford OX9 4TD.
(Tel: 0844-52426)

UTILITIES FOR THE QL

SIX programs on one Microdrive for the Sinclair QL.
"Nothing very dramatic . . . could be quite useful" *(PCW)*.

1 "Boot"
Displays DIRectory in columns, and allows LOADing of programs with single key-press. Without this, the directory will overflow the screen if you have more than about 18 files on cartridge; also "load mdv1-program" has *17* keypresses!

2 Q Mark"
Will allow you to FORMAT a cartridge repeatedly (as recommended by SINCLAIR). You only have to enter a name and number once.

3 "Q Back"
Makes back-up copies of cartridges. One key-press will copy *all* files onto an *empty* cartridge, or you may single-step and choose whether or not to copy each file. If receiving cartridge is *not* empty, you will be asked whether or not to over-write any namesake of a file about to be copied. You can copy from many cartridges onto one until it is *full*.

4 "Q Prune"
Will delete any file with a single key-press, so *be careful* with this one!

5 "Q Print"
It spools files the printer.

6 Tool
Tool kit for programmers

Instructions
On Paper and in a QUILL file (for when you lose the paper!). *All six programs*, will work with the extra microdrives if you get them, and have been successful with cartridges holding over 60 files each.

SPECTRUM ADVENTURES

***There's something so monstrous happening in* Castle Rathbone *you may not be able to read on. ugh, it's horrible ... it's* Peter Shaw ...**

I hope by now you'll have grasped the ideas that we've covered so far, on layout, structure and understanding within an adventure program. Well, this month, I'm going to give you the low down on monsters.

In the same way that room storage is done by array structures, both monsters and objects can be held in the arrays M(), M$(), 0() and 0$() respectively, that is an array for position, and then an array for the name of each. All you need now is a For/Next loop at the end of your program with all your monster and object information stored in data statements. Right, got that? Let's take a look at monsters first — ugh! Say you wanted three of them called Hurgie, Lurgie and Kevin. (*Oh, very amusing! Ed.*) You'll have to define your arrays M() and M$() in the following way:

```
DIM M(3): DIM M$ (3,32)
```

Take the array M(). This number would hold the position of monster number x in M(x). If M(x) equals zero then that means your monster is no more, deceased, dead. Simple, huh? In M$(), you only need to store your monster's name, so our three elements of M$(), for this example would look something like this:

```
M$(1)="HURGIE"
M$(2)="LURGIE"
M$(3)="KEVIN"
```

And that's about it. In your data array, all you do is put the monster's position in M(), and the monster's name in M$().

Objects are slightly more complicated. Say we had four objects in this imaginary adventure. A key, a ring, a headband and a floppy hat. 0() and 0$() would be dimensioned as follows:

```
DIM 0(4,2):DIM 0$(4,32)
```

You've probably guessed already that 0$() simply holds the name of the object in the same way that m$() just holds the name of a monster. But why, I hear you mutter, does 0() need two parts to each element? Well that's because objects can usually have two states, a bit like a lever can be either up or down. So, in the second part of each element we can describe what state it's in. But, you're muttering again, what if we make the position of the object zero — will that mean it's dead like the monster. No, of course not, if the position of the object is zero it means you're carrying it!

Right, now all you've got to do is work this into your own adventure. I'm sure you're on the ball enough to realise that you'll have to make checks during the running of the program to see if there's an object or monster in the room, and then make a decision about what to do — fight the monster, or pick up the object.

Next month, for the lost, confused or just plain lazy there'll be the final part of Routine Adventures and we'll be presenting you with the adventure to end all adventures. See ya there!

GIVE US A CLUE

We all know just how frustrating it can be when you're stuck in an adventure. Your head starts to spin thinking of all the different possibilities for solving a particular problem. Sometimes, it's a case of give up or go ga-ga. What's worse is the fact that you know someone somewhere has cracked it. And chances are they're a *YS* reader too. Well, now's your chance to get in touch with the person who can put you out of your misery.

If you have a problem in an adventure, send it in and when it's printed, just wait and see the solutions come rolling in.

Of course, the other side of the coin is the adventures you've already solved. You can bet there's gonna be someone stuck in a game you completed yonks ago. In which case let us know which games you can help with and we'll print your name and address so people can contact you. There'll even be three pieces of adventure software for our Star Helper each month, so jot down any really clever clues you've come across.

This new *YS* service is really about putting people in touch with one another. And it could be a great way of making new friends as well. All you have to do is fill in the coupon below and send it off to Give Us A Clue, *Your Spectrum*, 14 Rathbone Place, London W1

GREMLINS

Adventure International/£9.95

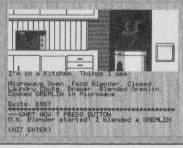

If bustin' made you feel good, how d'you fancy mincing up little green gremlins in the kitchen blender? Well, you can in Adventure International's adventure game of the film, *Gremlins* — it has graphics that move, so you can see one of the little monster's legs turning while his brains are blended. All in the worst possible taste!

The graphics are certainly the most stunning feature of the game. You can slice the head off another gremlin with a sword and see his head land up in the fireplace. Cook another one in the microwave. And they reckon the gremlins are the blood-thirsty ones!

The number of locations isn't that huge but you don't get that much time to explore them. Every move you make means the gremlins have more time to get together and gang up on you. So, you'll have to find ways of keeping them occupied (they love watching movies, for example) before they over-run the town. As you become engrossed in the adventure the tension certainly mounts — you know that every move you make could be your last.

Gremlins shares a number of annoying features with other Adventure International games — it won't accept short forms of words and you have to GO everywhere — GO WEST, GO DOOR, GO UP! Nevertheless, it's a slick bit of programming with an exciting story line.

This isn't an adventure for the addicts but if you're new to the games or you've seen the film this offers a good dollop of gruesome fun!

ONE-ON-ONE

THIS PROGRAM HAS BEEN PERSONALLY DESIGNED BY TOP U.S. BASKETBALL SUPERSTARS - *DR JULIUS ERVING* & *LARRY BIRD* AND IS BASED ON THEIR *REAL* GAME MOVEMENTS.

STAR GAME

Basketball fans should love this simulation of the game—It has some of the most lifelike animation ever seen in a sports game—

To see your player spin 180 degrees, dribble past the defender and shoot close in, gives a vicarious thrill quite unmatched in any other sports simulation I've seen.

All this adds up to one heck of a great game.

PAINTING BY NUMBERS

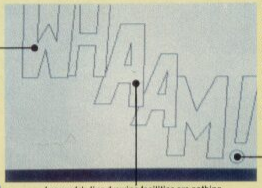

Forget the pens and paintbrushes — how about painting with pixels?* Penny Page *has taken a peek at four new graphics packages and* Peter Shaw *completes the picture.

First off, the sixty-four thousand pixel question — why do you want to draw pretty pictures on the screen? Of course, there's always the art for art's sake answer. After all, why do artists draw pictures anyway? The average artist can fork out quite large portions of his pocket-money on pens and paint-brushes, but at least you won't have to keep replacing your software. But if you're not that arty-farty how does the idea of making money grab you? Thought so. Well, I know of people who have sold their computer masterpieces to software houses who've used them as

Leonardo

Creative Sparks £9.95

It may not look like much to you, but considering the snail's pace the cursor travels round the screen and the age it took to produce, I'm quite pleased with it. Shame I can't say the same about the package.

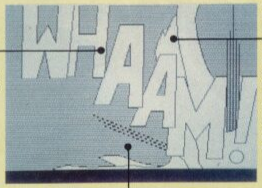

Wow, my first chance to draw a perfect circle. After working through the hefty 99-page booklet, I got the impression that this is considered an advanced feature!

1

Leonardo's line drawing facilities are nothing special. I'd plump instead for any one of the other three packages. It got really tedious twiddling my thumbs, waiting for the cursor to shift down to the next point. It seems that a fair chunk of *Leonardo*'s written in Basic including the cursor going on its speed!

Leonardo's got a very complex enlarge facility — not nearly as good as, say, Paintplus's. Once you've sussed out what the manual's trying to say the enlarge feature seems a doddle — in practice though it's a bit of a nightmare.

Drawing curved lines with Leonardo's surprisingly simple. I imagined — after the trouble I'd had with the straight ones — that this would be a desperate task. As you can see though, they ain't that bad, after all.

2

Creating this background turned out to be a lot simpler than I first thought. Once I'd read through the bit in the manual on textures about ten times, I got a vague idea of what they were driving at. Still, it took a fair bit of time. Thank goodness there's a good 'erase' facility.

Adding colour to the picture wasn't as bad as with *Lightmagic* — but it still wasn't much cop though. Mind you, the overall effect doesn't look too bad with the colour added, I suppose.

The textures facility's pretty flexible — more so than any of the other's hatch-fill options. It still needs a fair bit of grey-matter application to master it. I got a bit carried away with it here!

3

Leonardo's much the same as *Lightmagic* inits low-resolution grid operation. In fact, it has two modes to help you get the best out of the attributes. The first super-imposes a bright/normal grid over your picture to show you where the character cells are. The other offers a cursor the size of a character square.

Lightmagic

New Generation Software £14.95

I drew these lines with the 'Band' facility that allows you to move the line into exactly the right position before making it permanent.

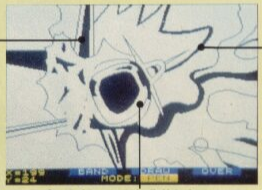

Lightmagic's colour handling leaves a lot to be desired. I had to decide exactly which colour I wanted each part of the picture before I set about drawing anything. Here I'm just using black lines.

1

Lightmagic's FILL command performs only a solid fill — a shame but it can cope with quite complex shapes in just one go. Still, you can get round its inability to perform a hatched fill by using either the airbrush mode or copy command.

No-one could possibly call *Lightmagic*'s colour handling easy. Still, the program does include a feature that superimposes a low resolution grid on-screen. You can then draw lines so they don't clash too much when adding colour.

Lightmagic has a 'variable brush size' feature that lets you use a brush from zero to twenty pixels wide. It's a pity that this was let down by the poor quality of the cursor in brush mode. From then on it was a bit hit or miss whether I got my lines drawn where I wanted.

2

One bit of the program I called into play a numb.. of times, was the 'Save/Recall Picture' feature. This lets you either save or recall the current picture up in high memory. Pretty useful, as no 'erase' operation was included, so I used it each time I made any major changes.

So now I've got all I want in black. Time to add the other colours. Adding the paper colours is the most tiresome part of the job. If you take a close look you'll see this wasn't one of my greatest successes.

The final effect's OK and considering all the obstacles I'm quite chuffed with it. Underneath, however, there's a hell of a mess where I've tried to cope with the bad attribute handling.

3

Lightmagic hasn't got a hatch-fill facility. To get round this, I tried the airbrush mode but made a complete hash of it. I did it eventually by drawing a small section of hatching, and then copying it with the 'cut-and-paste' commands. The rough edges were tidied up with the enlarge facility.

Leonardo's definitely aimed at the novice artist. It includes a 'programmable draw' feature that lets you draw all sorts of shapes. In fact, it's a bit like *Squirler* which we published in Program Power a couple of months ago! The worst bit's growing old waiting for it to perform even the simplest operations. OK, it's not a crime to write in Basic, but the cursor . . . well, I mean.

Picture Completion Time 4½ hours Rating 1½ /5

Lightmagic is aimed at the less talented artist. It's got a lot of good, easy-to-use features but they're not really cut out for 'real' drawing. Sure, you can create abstract pictures with ease but that's not what we're after here. It will handle the basic framework quite well but it comes a cropper on the old attributes. Not one for the experienced graphic designer.

Picture Completion Time 3½ hours Rating: 3½/5

title screens for games. You don't have to be a poor artist! But the best reason of all is that drawing with your Speccy can be real fun. And if you don't rate yourself as much of an artist, you'll still be able to knock up some professional looking graphics with your Speccy's help. Beats staring at a blank sheet of paper any day!

ART WORK

Every art form has its limitations and computer art's no exception. Your Speccy hasn't got an infinite number of pixels to draw with and your colour palette's pretty small. You can always mix a hue on screen with the aid of a grid pattern and clever use of colours but this only highlights the problem of the low-resolution attribute grid. All sounds a bit grim, doesn't it? But don't despair, 'cos a quick butchers at Pete's piccies will show you what's possible.

All of the packages Peter picked to produce his piccies (*OK, you can untwist your tongues now! Ed.*) are new to the market, though *Paintplus* has arisen from the ashes of P'n'P's previous package, *Paintbox*. All the software we looked at offers improvements on previous graphics programs but none of them has got it completely right yet. They're either too complicated or they miss out on one important feature or another. Take for an example, the idea of adding colour. A painter would usually draw a rough sketch on the canvas first and then slap on the colour afterwards. But with three of these packages you've got to choose your colours and put them on without any previous drawing. Only *The Artist* has got it right.

DRAWING THE LINE

One of the major problems about creating pictures on the Speccy is the distance

14.95

PaintPlus

Print 'n' Plotter £9.95

The first tricky bit was sketching in the basic lines. No variable brush size feature here, so these lines had to be drawn in outline, and then filled in.

Paintplus's FILL command is fast — it's just a shame it's not more reliable. As it admits in the manual, unless you're trying to fill a square or circle, then it's unlikely to get everything in first go.

1

PaintPlus is very helpful when it comes to taking out the inevitable cock-ups — well, they're inevitable when I'm around. Apart from the basic 'erase last operation' facility, *PaintPlus* also allows you to save a copy of the screen to high memory before setting out on any major changes.

I did the girl's hair with the arc feature. This manual's the only one to show an example of each possible arc — a small point maybe, but you'd be surprised how handy that info is.

Hidden deep within *PaintPlus* (behind this picture if you like) is a help page that provides a summerised version of the manual's commands. It's a great feature and saves a lot of time flipping through the manual.

2

Take a look at the detail in her eyes — good, innit? Well, it was done with *PaintPlus*'s enlarge facility and pretty simple it was too. first select the area of the screen you wish to enlarge by moving a box onto it. Then, press the '2' key and that area will be blown up to fill the full screen.

If you know the original painting I've copied here, you'll notice that I've back-combed her hair a touch. Still, I'm only an amateur after all!

As long as you get the ink colour right first time, the paper colour can be changed very easily using the paper wash facility. It's a pity this isn't included in the other three packages.

3

OK, it's a pain when *PaintPlus*'s ordinary FILL command fails from time to time, but this is more than made up for by its ability to perform a hatched fill. It has eight variants in all, and they're all very effective. Other programmers take note!

The Artist

Softek £12.95

It's a doddle (*shouldn't that be doodle? Ed.*) adding colour as you go along. You can change whole blocks, or individual character squares, by Ink and Paper separately or both together.

This is amazing — this screen took less than half an hour to produce. The FILL commands are wonderfully versatile and the basic lines are very easy to place and edit.

1

The program helps you all the time you're drawing by giving you a key guide at the bottom of the page. Simply press the symbol shift key and you can flip through the different modes of operation.

The cursor is described as intelligent. This means that it'll speed up if you hold your finger down, but if you simply press the cursor movement key, then it will only move one pixel at a time.

The enlarge facility came in very handy when I drew the pilot. As you can see, you can get quite a lot of detail in a very short time — and it's faster than an F-15 at full throttle.

2

I've got a hunch that the programmer of *The Artist* based much of his work on the operation of the Apple Macintosh program, Macdraw. Apart from its speed, it has so many goodies that you're bound to find one that'll help you do exactly what you want.

The Artist's ability to cut and paste came in very handy here when I got round to adding the final colours. I could move parts of the picture a couple of pixels in any direction, so they affect the attribute problems as little as possible.

The Artist's most powerful feature is its pattern fill command. Take a good look at this piccy and you'll realise it's little more than shading effects. *The Artist* also lets you create your own patterns or even choose a random pattern from ROM!

3

I've got to admit that I would have had difficulty producing a reproduction this good on paper. *The Artist* allowed me to chop and change a lot more easily than a rubber. Also it's advanced colour editor means I could try different colours in different areas, and then swop them about.

PaintPlus isn't the most advanced of the four packages but Print'n'Plotter have come up with a good balance between what to include and what to leave out. The package requires a modicum of talent before the best can be 'drawn' out of it.

It still comes up against competition from Melbourne Draw but the hatch fill feature means it gets my vote.

Picture Completion Time 2 hours Rating 4/5.

The Artist is a pretty amazing package. Its features are powerful and easy to use. Plans are already underway to produce a mouse and/or a trackerball to work with the program. There's seven talk of add-on programs that'll run in conjunction with *The Artist* like a 'Letraset' overlay database that'll allow the user to pick out icons and graphics for use in their own pictures.

Picture Completion Time 3/4 hour Rating 5/5

CP software FOR Spectrum, Amstrad, Commodore 64 & QL

THE STRONGEST VERSIONS OF THE CLASSIC GAMES — from good retailers or by mail order

SUPERCHESS 3·5

NEW FOR 1985

GUARANTEED TO CONSISTENTLY BEAT ANY SPECTRUM OR COMMODORE 64 CHESS PROGRAM WHATSOEVER

★ **Save Game & Program to Microdrive**
★ On-screen clocks for tournament realism
★ Unique new way of setting hundreds of levels
★ All play within tournament time limits

FEATURES

★ **Unique new way of setting levels by time gives you total control with three different options:** tell the computer to match your response times, give it a time limit to play to, or give it an average time to make its moves. **And you can force it to play its best move found so far. . .**
★ Change sides and levels during play if required
★ Stop the game and change positions at any time
★ Set up particular games you want to try at any stage
★ Will recommend your best move when asked
★ Can be set to solve problems up to mate in four
★ Extensive library of opening moves
★ Option to determine your own display and piece colours
★ You can play blindfold chess
★ Absolutely suitable for beginners; just set the minimum move time
★ Fascinating self-play mode for you to study the game
★ TOTAL INFORMATION about the computer's thought processes, including: best line of play found so far, number of positions evaluated, depth of search, internal scoring system, display of previous moves if required, help menu if you should ever get stuck

STRONG – 100 times faster, 1500 times more intelligent
FAST – from 5 secs to the highest levels, all within tournament times
PENETRATING – at tournament levels it searches at least 7 moves deep, trying tens of thousands of lines of play
FRIENDLY – keeps you informed. Ideal for the expert or as a tutor for beginners
SAVES TO MICRODRIVE TO SAVE YOU TIME

DEDICATED TO EXCELLENCE IN THE GAME OF CHESS

£9.95 48K SPECTRUM

BRIDGE PLAYER 2

NEW FOR 1985

THE STRONGEST BRIDGE PLAYER YET

★ Play a realistic game of bridge against the computer
★ Computer can play as defender or declarer

At last, here is a program with everything the solo Bridge Player ever needed: The computer generates random hands, allows proper bidding in the ACOL system including the Stayman and Blackwood conventions, and then IT TAKES YOU ON, playing both your opponents' hands. Every feature that can be packed into the Spectrum has been included in this program to give you a really satisfying and enjoyable game of computer Bridge. Play as Declarer! ! All Versions

FEATURES

★ Versatile bidding routines give you a worthy opponent
★ Study your game: post-mortem facility allows rebidding and replaying of any hand
★ You can review the bidding or play to previous tricks while playing a hand
★ Or input a hand or contract of your choice to test yourself
★ **COMPREHENSIVE ON-SCREEN INFORMATION DISPLAYS:** contract, tricks won so far, cards played in current and last trick, score
★ Option to **BIAS THE DEAL** to give you and your "partner" more high card points if you prefer to play as declarer

BRIDGE TUTORS with full manual & set hands to teach you the game
Beginners £5.95 Advanced £5.95
SPECIAL OFFER
Bridge Player 2 & both tutors £19.95

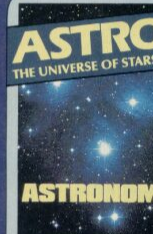

£9.95 48K SPECTRUM
WITH EXTENSIVE MANUAL

A REALLY STRONG OPPONENT
FOR A REALLY GOOD GAME OF BRIDGE

ASTRONOMER

NEW FOR 1985

THE UNIVERSE OF STARS IN YOUR OWN PLANETARIUM

Astronomer has everything in one powerful program . . . . See the night sky of more than 1000 stars from any time or place on earth. Watch it plot the planets or draw in the constellations for you. See close-ups from the Star Atlas of 362 charts. Watch animated detail of our Solar System in motion and see how it changes with the months. Calculate everything needed for serious astronomy to a high standard of accuracy and produce your own tables to save having to buy them. Anything can be transferred to a ZX Printer.

FEATURES

★ Comprehensive Manual with reference sections
★ Suitable for serious astronomical study
★ Night Sky views from anywhere on earth
★ Works for past, present and future times
★ Displays over 1000 stars
★ Draws the constellations on your command
★ Plots the solar system on the night sky
★ Huge Star Atlas for detailed study
★ Shows the motion of the solar system
★ Calculates position for the Sun, Moon, Planets, Comets and Asteroids
★ Then plots them on the Night Sky or Star Chart
★ Displays the phases of the moon
★ The distance from earth of any object
★ Sidereal time and rising and setting times
★ Ephemeris section: generate and print your own tables
★ Fully-compatible with ZX Printer

THRILLING command over the night sky from any time or place on earth
SERIOUS tool for the amateur astronomer – with excellent manual

"For those interested in the night sky it should prove fascinating"
"User friendly"
"Very good value" CRASH Oct 1984

£9.95 48K SPECTRUM

PINBALL WIZARD

FOR COMMODORE 64 AND ANY SPECTRUM

Superb, colourful fast-action graphics and sound give this game the feel of a real arcade pin-table. Realistic launch, flippers, bumpers, high-score, bonus scores and freeball features. Be a Wizard!

". . . I thought that a few minutes would suffice, and then found that a couple of hours had passed and I was still at it. Excellent. . . Pinball Wizard has it made."
CRASH MAGAZINE

"A brilliant idea that's totally absorbing and so addictive . . . . . "
YOUR SPECTRUM

"The display is well-designed and colourful and ball movement is very realistic."

SUPERCODE III

NEW FOR 1985

FOR 48K SPECTRUM & SPECTRUM+

150 ROUTINES
100% MICRODRIVE COMPATIBLE

With 150 ROUTINES and 100% MICRODRIVE COMPATIBILITY this has to be the ultimate Spectrum toolkit. It gives you the power to do everything you always dreamed of with your Spectrum in your own BASIC or M/C programs. Born of the earlier Supercodes (which themselves received 5 star reviews) we can claim confidence that we have packed absolutely everything into this State of The Art development. With Interface 1 it transfers easily to microdrive and is recognised by Sinclair as fully compatible. Needs no special knowledge to operate and comes with a comprehensive manual.

FEATURES

★ **Unique Access Program lets you INDEX/ LIST/TEST/TAILOR/RUN/RELOCATE/SAVE (to tape or microdrive with new or default name) /VERIFY automatically**
★ **Options include EXAMPLE/REPEAT/JUMP/AGAIN/CONT/TH=/DEMO/ DIAGNOSIS/MOVE**
★ **100% menu-driven with on-screen training** ★ **Brilliant user manual**
★ **Routines guaranteed SHORTEST AND FASTEST for all applications**

COMPATIBLE WITH: sinclair ZX MICRODRIVE

ROUTINES INCLUDE

PAINTING BY NUMBERS

between the screen where the pic appears and the keyboard that creates it. This is pretty unusual — just think, if you're painting, the brushes are at least in direct contact with the canvas and a sculptor chisels and chips at his chunk of rock. Of course, a light pen seems the obvious way round but none of these packages has that facility. And have you ever tried to draw with one of them on the Spectrum — they wouldn't have persuaded Picasso to pack in his painting!

All the programs include a User-Defined Graphics editor and positioner — very useful if you want to store away complex pictures in twenty-one graphics symbols but I find this option a bit of a waste of space. Still, that's only me and if I was asked to pin down the best program on its UDG handling alone, I'd plump for *The Artist.*

Well, now for the moment you've all been waiting for — which one of the four packages would I go for on overall picture creating ability. As you probably expected I'm going to hedge my bets. My choice lies somewhere between *The Artist, PaintPlus* and *Lightmagic* in that order. *Leonardo* just didn't come into the running. But before you make up your mind, have a look at what Peter made of the packages and see which one would most suit your artistic temperament.

PAINT BOX

	THE ARTIST	LEONARDO	PAINTPLUS	LIGHTMAGIC

Special Feature	'Overlay' mode, Wafadrive compatible, Airbrush UDG animate.	Programmable draw, Elipse 3D drawing & windowing	'Screen planner' Organiser program	Airbrush mode

BEST OF DRAWERS

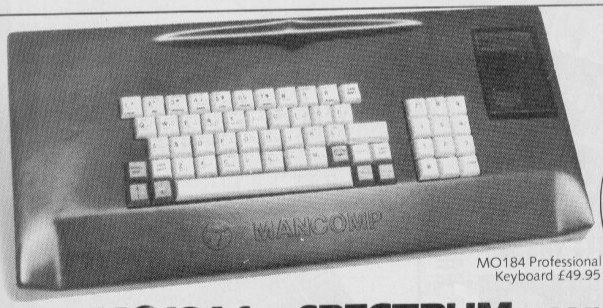

Anyone who can come up with an animated graphic on a Speccy which doesn't look lost on the huge screen of the Hippodrome, has got to be worth listening to about graphics packages. That's why we asked Chi-Yeung Choy, one of the winners of the *Great Animated Logo Compo* to come to the *YS* Art Gallery and offer a second opinion.

LEONARDO There's a multitude of commands here — shame they're so totally confusing. It's a must to have the manual at hand at all times. I found the cursor annoying to use as it didn't have any variable speeds. For the hype surrounding the launch of this package, I don't rate it at all.

LIGHTMAGIC The best bit of this is the large pool of commands open to you. True, the FILL command's a bit of a let down but the BRUSH mode makes up for that. Overall, it's easy to produce instant pictures but the attribute handling can be difficult to use — still, better than *PaintPlus.*

PAINTPLUS This is certainly an improvement on *Paintbox,* but it's still not quite the perfect solution to artistic endeavour on the Spectrum. The attribute handling is decidedly ropey. The best bit is the enlarge feature. It's a shame that drawing is limited to lines, rectangles and circles.

THE ARTIST Who needs a Macintosh when you've got a Speccy and this program. There are on screen commands, a very fast and extremely flexible FILL command and even a cut-and-paste facility. All it needs is a mouse and you've just saved yourself two grand!

MO184 Professional Keyboard £49.95

Designed in conjunction with educational psychologists, for Schools and Colleges.

The MO184 for SPECTRUM users

KEYS:
- ★ Low-profile Keys, only 4 mm travel.
- ★ Large keycaps.
- ★ Readable at 3 feet.
- ★ Bright colours for easy identification.
- ★ Strategically placed for easy
  - extended mode
  - delete
  - → ← ↑ ↓
- ★ Extra keys for left-handed users.
- ★ Full-size space bar.
- ★ Numeric pad with decimal point.
- ★ Double width enter keys.
- ★ Quiet action on gold contact switches.
- ★ Dedicated extended mode, delete functions available at no extra cost.

HOUSING:
- ★ Glossy wipe - easy material.
- ★ Fully insulated no mains flying around.
- ★ Generous height and depth to House Interface 1 & power supply, WITHOUT REMOVING FROM CASING.
- ★ Large slots at rear for Spectrum and Interface 1.
- ★ Palm rest, to prevent tired wrists.
- ★ Pen holder.

ASSEMBLY:
- ★ No soldering or knowledge of electronics required.
- ★ Full instructions supplied.

Full details on request - write or phone now!

7 REASONS TO GO MICROFRAME . . .

Disc interface connects up to two mini or micro floppies.

PROM boots Disc Operating System into on-board 16K DRAM.

Decoding circuit for up to 256 I/O channels.

Easy expansion with a 5 slot card frame.

Full buffering on signal lines.

External System Reset button.

Simply plugs directly into the Spectrum.

The GORDON MICROFRAME plugs directly into the back of any Spectrum, allowing the user full control of over 256 I/O channels through its 5 slot motherboard. It also has a floppy disc controller interface which boots the operating system into 16K of memory which shadows the BASIC ROM. The operating system supports basic commands such as load, save, merge, erase, cat., open and close.

To purchase a MICROFRAME or obtain further information about all GORDON MICRO products, including the full range of interface cards, please write or telephone:

Gordon Micro Limited, 3 Callendar Rd, Heathfield Industrial Centre, Ayr KA8 9DJ. Telephone: (0292) 280467.

The Jet Set Willy loader progam. Use this to get your POKEs in.

JET SET VARIABLES

BYTE (00-FFh)	WHAT THEY DO!
00h-7Fh	These bytes contain the background descriptions of each room. Two bits are used for each character block on screen, so you're restricted to four possible types of platform. Have a look at the **DESIGN A PLATFORM** box for a breakdown of values and what they do.
80h-9Fh	The name of the room in ASCII
A0h-C3h	Four sets of nine bytes describing the shape and colour of the platforms. The first byte of each block holds the attribute (colour) value, followed by eight bytes of UDG-like pixel information.
C4h-CCh	Colour and shape info for the stairway set out in the same way as the platform info.
CDh-D5h	Colour and shape info for the travelators again in the same format.
D6h-D9h	This four bytes block holds details of the position and direction of the travelators (see **TRAVELATORS AND STAIRCASES**).
DAh-DDh	A further four bytes for the position and length of the stairways (see **TRAVELATORS AND STAIRCASES**).
DEh	One byte for the border colour.
DFh-E0h	Two spare bytes.
E1h-E8h	Eight bytes of pixel data to describe the shape of any possible objects.
E9h-ECh	These four bytes let the program know which room number to send Willy to when he leaves the room he's in. The order is; left, right, above and below
EDh-EFh	Another two spare bytes.
F0h-FFh	A series of eight two-byte pairs that describe the moving nasties in the room. Take a look at **JET SET WILLY'S ADDRESS** Book opposite for some ideas on how to get those Killer things on your screen

INTERIOR DECORATING

OK, we'll come clean — we did know where the extra room in* Jet Set Willy *was. And it wasn't long before you all found it as well. Now* Dave Nicholls *shows you how you can start re-arranging the furniture in Miner Willy's mansion.

Right then, get out your paint pots and wallpaper paste buckets, 'cos it's time to Spring clean the *JSW* mansion. All the info you'll need to start re-decorating the rooms is listed below and out of the goodness of our hearts we're going to give you the loader program which first appeared in Issue 6. (*And where's your copy then? Ed.*). It shouldn't take you long to decorate and add on extensions. Each room is held in just 256 bytes at location C000h and goes up in sequence at D000, E000 and so on.

Got all that? Good — now put on your overalls and get decorating!

For all of you not convinced that April Showers existed (*how could you mistrust us? Ed*), here's the proof.

DESIGN A PLATFORM

BIT PATTERN	EFFECT
00	This is normally blank and makes up the background for the room. Your shape description should hold zeroes — unless of course you have other ideas!
01	Sections of the screen with this bit pattern allow Willy to pass through from underneath or the side, but they'll hold Willy up if he lands on-top.
10	This bit pattern won't let Willy through no matter which direction he attacks from — a bit of a dead end all round.
11	This is the bit pattern for the killer blocks — one touch and poor ol' Willy's a gonner.

Here's the bit information for the background of each room — the wallpaper and paint job.

TRAVELATORS AND STAIRCASES

1st byte:	This tells you the direction of the travelators and stairways — 0's for left and 1's for right.
2nd and 3rd byte:	Together these bytes make up a screen address for the bottom of a staircase, or the left-hand end of a travelator. The picture's built up off screen and then copied, so this assumes that the screen starts at 5E00 hex. The real address then has to have 11E00 added to it.
4th byte:	This gives the length of the stairs or travelator.

This is the information you'll need to consult your own travelators and stairways. Going up!

JET SET WILLY'S ADDRESS

All numbers are in hex:

8907	The game starts here after you've pressed enter from the logo screen.
8922	This prepares the moving graphics data.
898B	The subroutine here puts those wandering Willies at the bottom of your screen.
8D33	Here the basic room platform data is put on 'screen'.
93D1	Puts the objects on the screen.
9534	Handles the special case rooms. you know the ones — the master bedroom and the bathroom.
9456	This subroutine puts a 2 by 2 graphic on screen.
91BE and 90C0	These two subroutines are the main ones for handling the moving graphics.
8420	A single byte containing the current room number.

Left: Here's the break-down you'll need (*and probably get if you try it. Ed*) of the Jet Set room information area. Just change the numbers to suit your new design scheme. The easier place to start is the [room — that's where Dave put April Showers.

AT LAST... THE AFFORDABLE ROBOT.

The Zero 2 Robot has arrived. It's the first truly micro robotic system available and remarkably it costs less than £100.

Controlled through a cable from your computer, it is equipped with wheels, pen, line follower and two tone horn. It will connect easily with the Spectrum, BBC B, Commodore 64 and all other personal computers with a standard 'D' type RS 232 connector.

The Zero 2 Robot will add a new dimension to your computer. It is capable of precision movement to Resolutions of 1mm and can be fitted with bump and hole sensors.

As a teaching aid it has endless applications and for P.C. users at home it's just great fun.

With additional software and some exciting new add-ons planned for later this year, the Zero 2 Robot will open up a whole new area of applications and games.

SPACE ACE

Welcome to the YS Space Academy. Here you'll receive full in-flight training from Space Commander,* Ross Holman. *Master the techniques of time travelling in* Starion, *the stunning new 3D space game from Melbourne House. Time waits for no man, so go for it now!

Long, long ago on another computer, space was opened up for exploration. Now *Starion* leads the way into time travel on the Spectrum. It's a fast 3D game that takes you into the 4th dimension — time.

You play the part of Starion, the pilot of the SS Stardate, the first spaceship capable of time travel. Your mission is to rectify the discontinuities in the space-time continuum that've been caused by a bunch of anarchist aliens running amok. They've been taking objects of historical significance from their true time periods and placing them in another time zone. You must set about undoing the damage caused by these renegade time bandits.

Time in *Starion* is split into 243 separate zones arranged in groups of nine. Nine zones from a time grid, nine grids a

TIME — THE FINAL FRONTIER?

This is the view from your spaceship but once you've become a proficient star pilot you'll hardly need to look out of the cockpit window. All the information for your survival in the dog-fights is displayed on the console at the bottom of the screen. Try flying 'blind' to improve your scanner reading skills — there's immense satisfaction in shooting down an enemy before you've seen him.

Here's a view of the SS Stardate, the ship that'll shape the course of history if you complete the mission. This is about the most complex graphic in the game, so it's a shame that you don't get to have a go at shooting it down!

Watch out for your score — you'll need to clock up a pretty high score before you qualify for a complete re-fit of your ship. If only we knew just how high!

Your spaceship's acceleration is an incredible 0-top speed in just over a second. But you're at your most vulnerable when travelling flat out, so go sparing on the old throttle. The only time you'll have to really give it some welly's when you're picking up the cargo from an alien ship.

This is the cargo hold where you'll store the letters from the alien spaceships as you collect them. They'll always come up in the same order so there's no chance of the word forming as you go zapping.

Keep a careful eye on your hull temperature gauge. The faster you go and the more laser fire you use, the hotter things are gonna get. And if you're already burning up when an alien missile makes a direct hit, that could mean another hull blasted into oblivion. As a general guide you'll find that you're at half the max temp when travelling at top speed.

Your on-board computer will constantly keep you up-to-date on what you should be doing. If it's telling you to pick up a letter, pick it up 'cos until you do, you won't get another one no matter how many aliens you blast.

If you use the two scanners correctly, you'll be able to pin-point your position exactly. The one on the left shows the horizontal plane flying up the screen. The other covers the vertical plane, so if there's an enemy on the same level he'll appear on the right of the scanner. Don't panic, with a little bit of practice, you'll soon have it sussed.

If you're using a joystick, pull back for positive pitch (up) and push forward for negative (down).

There are two schools of thought in the YS Space Academy about the cross-hair sights. Some reckon they're essential to line up on the enemy while others say they block the view. Luckily, you can choose for yourself as they can be turned on and off at the press of a key.

Just in case you lose track of time, the year you're in is displayed on your console.

Yaw is just the fancy term for left and right. Of course, there's not really an up and down or left and right in space but you've got to keep some bearings.

The spaceship is fuelled by hydrox and although it drops more quickly the faster you travel, you won't have to stop off at any intergalactic filling stations — 'cos there aren't any.

The oxygen level's likely to cause you most trouble. It goes down at an alarming rate and when it reaches rock bottom that's goodbye to another hull. Land on a planet and you can breathe again!

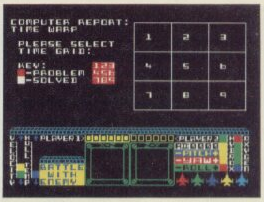

Your ship rolls for just a second or so as you yaw to the left or right. Go on try it — it's the closest you'll come to space sickness!

You start off with five protective hulls around your ship but unless you're very careful they'll peel off pretty quickly. And it's no joke being naked in space!

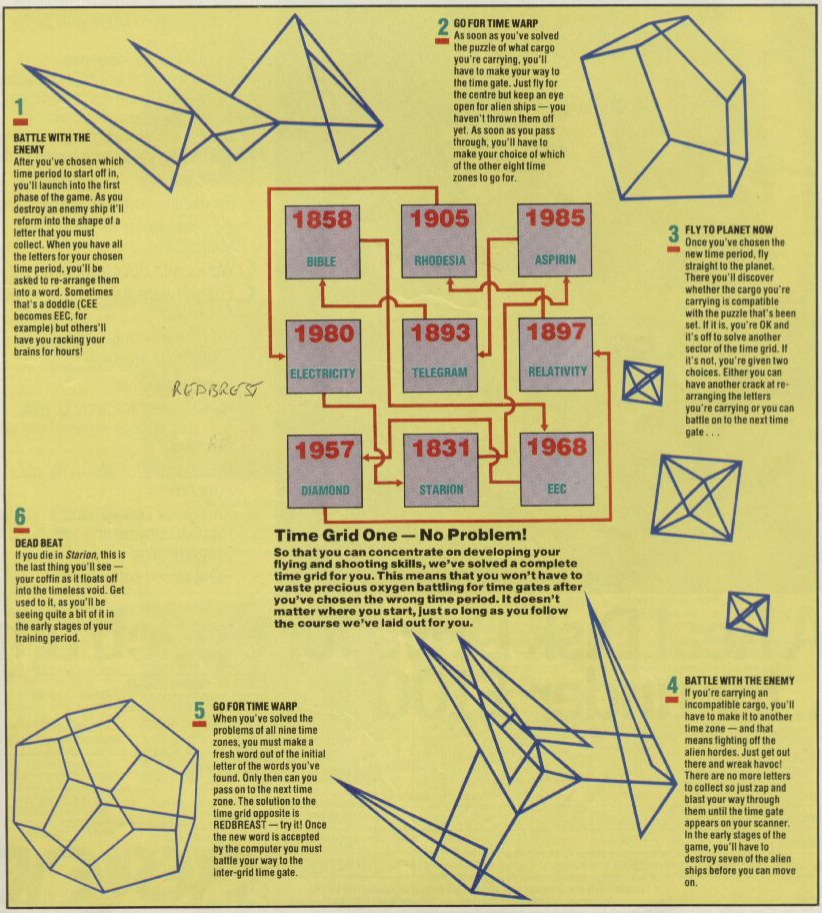

time block and there are three of those! To complete the game you've got to trek round all of the zones patching up the holes in history. Ranged against you are the aliens in a fleet of different sized and shaped spaceships. They're lugging around with them the stolen objects that should form our heritage, but being a brainy bunch they've split each object into the different letters that spell it. Each ship then carries one letter. To sort out the shambles, you've got to blast the aliens, retrieve the letters, reform the word and then take it back to its rightful date in history. And with 243 different objects to be collected, this is not the work of an afternoon.

Starion's a very fast, very playable shoot 'em up. The wire frame graphics are easily the smoothest and most realistic I've ever seen on the Spectrum. But it has to be said that it won't be everyone's galactic gargle. Solving the anagrams to form the objects slows the flow of the game down and if you're not into puzzles and word-games you'll soon get cheesed off with those bits. And, yes, it does look a bit too close to *Elite* for it to be a coincidence. Still, the arcade sections seem to me to be a lot faster on *Starion* even if it hasn't got quite the same in-depth game content. And after all, *Elite's* not out on the Spectrum yet so you could always get a bit of training in, while you wait.

For all that it's a very playable arcade game — you'll soon find that reading the scanners, accelerating and decelerating and judging hull temperature is second nature to you. If you're a budding time traveller or space cadet, go for it!

When you begin your mission this is the first screen to greet you. Choose Time Grid 1 as we've solved it for you below. Your status increases the more time zones you solve — starting as a Novice, one time zone will elevate you to a Chronotourist, three in a row and you're a Trizoner and when you've completed the whole grid, step forward a new Gridmaster!

This state of the art range of Quick Disks is the real alternative to tape filing systems without the high costs of the floppy disk system –

Crescent £99.95 Quick Disk

The low cost alternative to the Spectrum Micro Drive with better media.

All units have Japanese mechanisms and are manufactured by Servicon Dynamics, a company with over 15 years of success in specialist electronic manufacturing. All items carry a 12 month warranty.

- 128K storage
- Reads and writes 65K in 4-8 secs
- 20 times faster than Sinclair Micro Drive
- Works with Spectrum Plus
- Full software support (plus Inner Circle Club)
- No power supply needed
- Quick disk interface
- Quick disk drive
- RS423 interface with 'D' type connector for all kinds of dial-up services
- RGB socket for colour monitor attachment
- 2nd Quick Disk expansion socket for disk copying and advanced programming
- ROM based software

A Real Disk Drive for Spectrum ... for under £100

CRESCENT

Let Battle Commence!

Blast him!

Each of the enemy spaceships has its own distinct characteristics. The smaller dart-like ones are often the trickiest to take out as they're faster and more manoeuvrable. Generally, the more cumbersome the spaceship, the easier it is to blast.

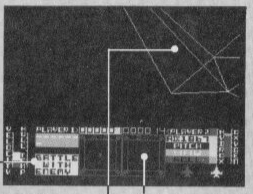

The enemy ships don't zoom in at you but zig-zag their way across the sky, so it's usually easier to keep your distance and blast them when they're just in range.

Use your lasers little and often. Firing rapidly is a great temptation but it's a sure fire way of over-heating and losing hulls. Only when the spaceship is dead centre on the screen will your laser have any effect on it.

A Close Shave

The enemy ships carry an unlimited arsenal and they're not afraid to use it. Each of the different types of ship fires a different shape missile, but they all have the same effect. If one hits you smack on, your temperature rises and you're more vulnerable to hull loss. That's why it's best to travel at slower speeds — that way your hull can absorb the rapid heat rise of a direct hit.

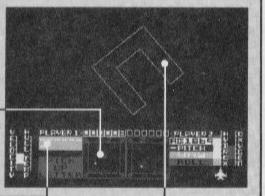

If you let the enemy get in close you may find yourself in big trouble. If you collide it's goodbye cruel world!

If a missile's coming straight for you, shoot it down. But the general rule is, take evasive action and don't go out of your way to look for them.

Go for Cargo

Keep an eye open for the enemy because you're at your most vulnerable when travelling at top speed and in a straight line towards a letter. Close in on the cargo, get it slap bang in the middle of your screen and fly for it. There's no need to slow down or stop as it'll be picked up automatically.

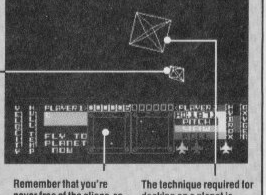

As soon as you've shot down one of the enemy it'll drop its cargo in the shape of a letter. Go straight for it rather than hanging around waiting for the next alien wave to arrive.

As soon as you've shot a ship, flip right over and you'll see the fragments form into the shape of a letter — a nice touch. Now hit the throttle and go for it — this is the only time you really ought to be travelling at full whack, 'cos if you're too slow the letter starts to back off.

Safe Landing

You'll come across three different planetary formations — one has a single moon, another has two moons in orbit around it and the third consists of two identical octohedrons rotating round each other. All rather strange as the planet is supposed to be Earth. Still, it can be quite exhilerating getting as close as possible to a planet to watch it rotating above you.

Remember that you're never free of the aliens so keep an eye on your scanner. The enemy always appears as a plus sign, missiles as dots and everything else as a minus sign.

The technique required for docking on a planet is much the same as for picking up the letters. Fly straight at it and you'll make a safe landing automatically.

HACKER'S GUIDE

Join Chris Wood on a journey through time and space — into the centre of Starion.

From a programming point of view, two things make **Starion** stand out from the crowd — its 3D animated graphics and its speed. Just take a look at those spaceships move as they come towards you. They're smooth and completely shimmer free and certainly the best I've yet séen on the Speccy.

So, how's it done? Well, briefly, they're constructed using SINE tables to calculate the perspective and to give the illusion of depth. Perhaps the space-ships look a little squashed from some angles and the point of infinity is pitched a little close owing to the compact size of the programmer's universe, but these are minor criticisms. There's no over plotting here.

Speed is essential to a realistic shoot 'em up like this and the programmer's gone for it in a big way. Take a look at the way he clears the screen. The method he uses is four times faster than LDIR, the usual means of moving blocks of data, and that's certainly no sluggard!

He does it by using the Stack. It's a bit complicated but I'll have a go at explaining. First off, he saves the Stack Pointer and then moves it to the end of the screen. He then LOADs the HL register pair with zero, goes into a massive loop PUSHing HL onto the Stack. The Stack moves up the screen and down through memory and in the process, clears the screen. (You have to remember that the screen is upside down as far as memory's concerned).

Now that's an awful lot of explanation for a process that takes just 0.0067! In that time the top two-thirds of the screen is cleared which is only a quarter of the time it takes your telly to refresh the picture. Now, that's fast!

As for the 3D shapes, they're all constructed in high memory and transferred onto the screen using another version of the Stack method. In fact, he uses nearly all the alternate registers except for the two HL pairs. It all happens so swiftly that both the actions of clearing and re-drawing the screen are nigh on completed in less than the time it takes to refresh the television. And that's why you don't get any of that 'now you see it, now you don't' sort of flickering.

Now let's have a look at the devious ways that this programmer's mind works. You only have to take a butchers at the way he's encrypted not just the passwords but even the normal game messages. He's obviously paranoid about people finding them out by PEEKing the program rather than playing the game (**as if we would!** Ed).

To print a message on the screen, he partially decrypts it in its original place in memory and then it's copied to a work space to be further decrypted. Connected with this, you've probably noticed that you get a momentary mess appearing on the screen when any messages are printed. This comes about because the same area of memory is used to decrypt the text as to store the screen before it's down-loaded. At least it has the effect of making you look down at your console to read a message you might otherwise have missed.

You'll probably have gathered by now that this is one programmer who knows what he's doing and isn't afraid of a bit of showing off. Take those enormous numbers that indicate every countdown, for example. The first time they appear it looks as though the machine's crashed — but you soon suss out that the numbers fill the whole screen, including the border. Very flash! It's done with a neat litte Interrupt Mode 2 routine that sends bands of colours to the border in much the same way as the SAVE and LOAD commands. Only these ones are so precisely timed that they stay stationary and vary in size to make a perfect match with the rest of the shape on the screen.

After **Alien 8** last month, **Starion**'s protection was a doddle. Mind you, the complexity of the programming made it very difficult to get any more than a POKE for infinite hulls, but at least you'll have a very thick ship! Still, just to be on the safe side I've included the POKEs for infinite oxygen and hydrox.

To incorporate the POKEs I have found, type in the short program below, SAVE it before you RUN it and rewind your tape of **Starion**. Load that as normal until after the second short block — there is a small bit of Basic followed by some code. When it's in, stop the tape, take it out, reset your Speccy and then type in LOAD and RUN the program below. When it prints up 'LOADING', replace the **Starion** tape and the remainder will load and run but this time you'll have the thickest ship in the galaxy.

Oh, and by the way. When you've got to the end and reached event Zero, you're told that you are now the Creator and you're given a Richmond telephone number to ring and told to ask for God. Funny, I always thought he lived in Cambridge!

```
 10 REM STARION LIVES ETC. v2

YS MEGABASIC PRIORITY ORDER FORM

SPECIAL OFFER ENDS!

Yes, this is positively your last chance to buy *YS Megabasic* at the reduced rate of only £7.95 — that's a full £2 off the normal price of £9.95! And as this is the last ever opportunity, we're not asking you to send us any YS coupons. A cheque or Postal Order for £7.95 is your passport to MegaProgramming.
So, if you've been dithering, delay no longer. Forget the coupons, just fill in the form.

How to Order YS MegaBasic

Just complete the order form below (or a photocopy) and send it off to *Your Spectrum, YS MegaBasic Offer, Sportscene Specialist Press, 14 Rathbone Place, London W1P 1DE.* For each copy you'll need to enclose a cheque/Postal Order for £7.95, made payable to Sportscene Specialist Press. But hurry — this is your last chance at the discount price of £7.95.

QTY	ITEM	PRICE	TOTAL

KEY FEATURES OF YS MEGABASIC

- *An extended command set. **YS MegaBasic** recognises over 35 new commands, which allow you to access the new features available as well as providing the opportunity to make more of the commands in standard ZX Basic.*
- *64 columns of text. Useful for wordprocessing and database applications.*
- *Three character sizes. Using **YS MegaBasic**, you've now the choice of accessing double-height, standard and half-width characters.*
- *Three character fonts. **YS MegaBasic** offers three font styles which allow your Spectrum to mimic other machines on the market.*
- *Windows. You can manage up to six QL-style windows on-screen at any one time.*
- *Sprites. Using the free **Sprite Designer** package that accompanies each copy of **YS MegaBasic**, you'll be able to design and manipulate up to ten sprites on-screen at once!*
- *Enhanced sound. Mike Leaman's taken the Spectrum's BEEP command and given it the full Mega-treatment.*
- *Procedures. Structure your programs and define new commands — it's all here!*
- *Stippled characters. QL-style stipples allow you to mix colours on-screen to give interesting colour effects.*

FOR CONNOISSEURS

OF MODERN LANGUAGE LEARNING

COMMODORE 64 ● BBC (32K) ●ELECTRON ● SPECTRUM (48K)

Dealers, contact Lightning, Proteus, Centresoft, Microdeal or Tiger.

All titles are immediately available from good computer stores or by 24-hour mail order. Price £8.95 (overseas orders add £1)

For beginners, O-level and beyond, these best-selling programs are unique and highly successful aids to language learning. Each cassette provides a comprehensive series of vocabulary lessons and a variety of self-paced learning and test modes. All accents and special characters are clearly displayed and different colours denote masculine, feminine and neuter words to reinforce gender learning.

The create command enables new lessons in vocabulary or grammar to be entered, edited as required, then saved on tape. By using this simple yet vital feature, homework lists and exam revision can be retained indefinitely and recalled on demand.

Two cassettes are available for each language, covering thousands of words; Level A provides 16 lessons in general vocabulary; Level B provides a further 16 lessons including adjectives, adverbs and fully conjugated verb lists.

POWERFUL UTILITIES

MAKE THE MOST OF YOUR MICRODRIVE WITH

INTERFACE III

THE IMPOSSIBLE HAS BEEN DONE

Yes it's true this **fantastic** new peripheral will transfer **every program available** on to microdrive. **Yes every one.** Yet, believe it or not, it is so **easy to use** that we are training our pet cat (Clive) to use it. **Anyone** capable of loading and saving a BASIC program **can** transfer **really awkward** programs to microdrive.

Just look at these features...

- Consists of hardware and software (software on microdrive cartridge).
- Transfers all programs available on to microdrive.
- Very, very, easy to use. (if Clive can do it we're sure you can)
- Makes a "snapshot" of any stage of a program. (saved as a screen$)
- Transfer can be actuated at any stage allowing "customised" versions.
- Will also save to tape. (normal speed load once saved)

IF YOU HAVE A MICRODRIVE YOU MUST HAVE INTERFACE III

ONLY £39.95 inc. P&P

SIMPLY AMAZING

Trade and distributor enquiries invited, U.K and overseas.

The software can be supplied on cassette for tape users.

This product is in a class of it's own. Designed by DRAYSOFT.

DOUBLER

THE tape backup "device".

After **spectacular success** on the CBM 64 and by public demand we introduced **Doubler** for the Spectrum. Now we have released **Doubler Mk.II,** which is professionally cased and has greater tolerance to the varying types of cassette decks in use.

It includes **hardware and software.** This **superb "device"** allows you to make backup copies of software with **all types of loader** regardless of length and speed. (Includes pulsing headers and different baud rates) In fact our tests have **proved** "Doubler" is capable of copying with **100% success.**

Requires access to **two** cassette decks. The software allows you to save a **brand new machine copy** onto one cassette deck while loading from the other. **Fast and easy to use.** They said it couldn't be done.

ONLY £14.95

PATENT APPLIED FOR

Customers who have the Mk.I Doubler may return it along with £4.95 for the new version.

All prices include P&P and VAT. Send cheque, Postal Order or Credit Card No. Credit Card orders accepted by phone. Callers welcome. Wide range of goods stocked. Trade enquiries welcome. European orders send price as advertised. Outside Europe £2.00 for airmail. Mail order to Evesham Shop please.

HOTHEADS

If you're not that flush, but you need a printer, stay cool and go thermal.* Peter Green *comes in from the cold to consider the hottest ones around.

The Sinclair ZX Printer was unique — for its size and price, it was quite a remarkable technical achievement. Still, it did leave something to be desired. All those sweaty paw prints, left all over the silver listing paper. And the print quality would strain the definition of the word adequate, as well as your eyes. Program listings on the stuff cause harassed editors to tear their hair out (or at least that's Kevin's excuse!).

One solution has been to find a way of linking 'real' printers, like the large dot matrix ones, to your Spectrum. For that you need a commercial interface, or you could have a crack at knocking up one yourself. (*Of course, you'll need a copy of YS Issue 6 for that. Ed*).

This works, but your Speccy is now dwarfed by a huge printer — a bit of a shame when Uncle Clive has gone to so much trouble to keep it all small. And it causes even more problems if you've got to squeeze your complete computer set-up into the confines of a cramped living room — worst of all it means shelling out between two and three times as much for the printer as you paid for your Speccy. That's good enough reason for me to look seriously at thermal printers.

ANYTHING YOU CAN DO ...

So, what can thermal printers do that dot matrix or daisywheel can't? Well, nothing really — except save you a lot of space and some cash. Most of them are quite tiny, and the good news is that they're all comparable in price to a Spectrum.

Thermal printers don't need linked ribbon because they use special paper impregnated with a heat-sensitive ink. The print head is still 'dot-matrix' but the dots are small wires that can be independently heated. The heat makes the ink visible in the correct dot patterns to display characters. Take into account that the saving you'll make on ribbons is offset slightly by the higher cost of the special paper.

It's only got to brush its heating elements over the surface, as the print head doesn't have to strike the paper to form an image. Also, thermal printers ought to be much quieter than dot matrix ones to make its mark. Not so though, I'm afraid — to bring the price down the manufacturers often use fairly cheap electric motors to feed the paper and scan the print head, so you get a different sort of noise, but it's not quieter. It's no coincidence that the least noisy of the printers I tested was also the most expensive.

If you plump for one of the most basic of the thermal printers, you won't need an interface. They are designed as plug-in replacements and work directly from the Spectrum bus. The others have standard RS-232C or Centronics ports, so you need a printer interface as well — take this into account when you're considering your budget. For the extra though, you'll get many of the features of the big machines, including emphasised, condensed and enlarged fonts, variable line spacing, international character sets and bit image graphics.

IN THE PICTURE

Bit image graphics means you have direct control over the heating elements in the print head. So, you can print any pattern of dots onto the paper. Interfaces such as the ZX Lprint contain the software that uses this facility to perform a screen dump, so duplicating the COPY command. Although you'll have to bone up on the graphics modes before you get to grips with them fully (especially since most Epson-compatibles are Japanese, with manuals written in Janglish!), they do allow you to draw dot graphics of any kind, unrestricted by the Spectrum screen size or resolution. And as they all use roll paper, you could write a program that printed a frieze type of picture.

NO LIMIT?

Bear in mind if you're considering thermals that, with one exception, none of them can handle A4 width paper, or even cut sheets. Using roll paper means that the top and bottom of your printouts have ragged edges where you've torn them off. Still, that's OK if you only want the printer for listings — or if you're happy sending out letters that look like supermarket checkout receipts.

You'll also need another spare mains socket. All but one of these printers require an external power supply, of the small transformer PSU type. Two of them can run off batteries, but they eat them and if you don't use re-chargeables, your running costs will be unbelievable.

WHAT PRINTER?

Before choosing one of these printers, you'll have to decide exactly what you're going to do with it. If you're looking for a straight replacement for the ZX Printer, then the Floyd 40 is your best bet. Unlike the Alphacom it does a lot of clever tricks besides duplicating a Sinclair printout.

However, if you're likely to be writing letters and so forth, you'll need to look up-market a bit. There, the Epson P-40 equals the Brother HR-5 on features, but for the extra fifty quid, the HR-5 lets you use cut A4 sheets and offers the back-up of ink ribbon if you run out of thermal paper. Remember though, that you'll need an extra interface for both of them.

Can also accept ink ribbons

LIZ HEANEY

ALPHACOM 32

Dean Electronics, Glendale Park, Fernbank Road, Ascot, Berks.

When it comes down to performance, the Alphacom 32 is simply a souped-up ZX Printer. It will LPRINT, LLISt and COPY in exactly the same 32-column format and nothing else. It won't recognize any of the standard Epson control characters which alter the print width, font style or anything else. And you won't get the graphics commands in any other form than the COPY mode. It even prints a question mark if you send it a line feed code! For my money, this makes it the least useful of the four printers.

I tested the blue thermal paper (though you can get black) and found it easier to read than a ZX printout, but the print quality was about the same. The printer also kicked up a bit of a racket — there was a constant grinding of the powerful, geared motor throughout the printing cycle.

The machine has a similar footprint to the Spectrum. There's a through connector for other peripherals but the thick connecting cable puts pressure on the power input jack so you can't tell whether it's on or not — it uses non-latching membrane one-off switches and there's no LED indication. The plus is that it's a plug-in-and-go printer, so no software setting-up is required.

FLOYD 40

Shive Instruments Ltd, 153 Merrion Road, Ballsbridge, Dublin 4.

Nice software, shame about the case! This is the tattiest looking of the four, but it's got some pretty nice facilities.

I had to repair the thing before I could use it, as the printhead/motor mechanism is secured internally by three drops of glue — not such a great idea for goods entrusted to our postal service! To be fair though it was a pre-production model.

This is another plug-in ZX Printer replacement with a through connector, but this one draws its power from the Sinclair supply.

It offers several formatting modes which use embedded control codes flagged by !. Automatic word-wrapping is performed on printed text to make your paragraphs neat. The word-wrap also takes into account that characters may be printed double-width. You can also have double height and inverse characters or any combination of the three that takes your fancy.

If you're printing out listings, you'll get them with right-justified line numbers, and everything else is indented and word-wrapped. All of which makes for very readable listings. Graphics mode prints everything just like the ZX Printer. You'll have to get used to the slight inconvenience of the embedded codes, but the results are worth it.

EPSON P-40

Epson UK Ltd, Dorland House, 388 High Road, Wembley, Middlesex, HA9 6UH.

This is a smart, simply-styled pocket-size printer offering many of the facilities of its bigger brothers in the Epson dot-matrix range. Enlarged, emphasised, condensed and normal characters are software-selectable using the standard control codes. You're also offered Epson bit-image graphics and several international fonts.

This is certainly the neatest of the four printers. It's fractionally smaller than a Spectrum, and I reckon you could fit about eight P-40s into one of the standard 80-column dot-matrix printer. The P-40 can print 40 or 80 column text on its 110 mm (4") wide paper roll. Easily accessible DIL switches let you select things like default column size, auto line feed, and RS-232C data format and baud rate if you're using that interface. In fact these simply poke through the back of the case so you don't need a screwdriver.

For it's size, the P-40 makes a bit of a din. It runs off an internal NiCad battery.

If you go for this printer, I'd recommend getting the Centronics version (plus a suitable interface like the ZX Lprint III) rather than the RS-232C version. Epson use non-standard RS-232C connectors to save space and we had great difficulty in connecting up the equipment.

BROTHER HR-5

Shelpy Street, Cruide Bridge, Audenshaw, Manchester M34 5JD.

This is the largest of the four printers but it's also the most versatile. For starters you get the choice of using either thermal or ordinary paper, and there's no problem with fitting in the ribbon cartridge. The HR-5 senses automatically which type of printing's required.

Second, it's the only one of the printers to accept A4 cut sheets, so it's ideal for letters and the like. It offers all the printing options of the Epson, plus its own internal graphics character set. The actual printing is performed fairly quietly, and with the thermal paper, I obtained a very contrasty, high-quality printout. Beware however — the thermal paper only works one way round, and the two sides are almost identical.

Print quality is just as good if you're using the ribbon on ordinary paper, though because there's no striking action, smooth copier-type paper is best.

You can also use roll paper with the clip-on roll holder that comes as an accessory. Battery operating is possible, but at 1 amp they peg out pretty quickly — I fitted a new set and got a low battery warning after printing one page! So use the mains adapter.

I'd certainly recommend this one as the top-of-the-range choice.

TT-S: SPECTRUM TOOLKIT £7.95
For the 16 or 48K Spectrum. 5 programmer's programs on one cassette.

★ **GAMMA:** A relocatable, microdrive compatible BASIC extension giving improved editing plus 10 new keywords including intelligent RENUMBER and MOVE as well as DELETE, FIND, TRACE, FREE, AUTO and VARIABLES.
★ **SCREEN:** A High resolution drawing utility.
★ **UDG:** A powerful aid to creating user-defined graphics characters.
★ **TAPE:** Reads valuable information from tape file headers.
★ **RAM:** A thorough memory test program.
(A Dutch version of TT-S is available from AMB Software)

HI-T: SPECTRUM SCREEN ENHANCER £5.95
Gives the option of using 32 rows of 64 characters each on the screen of a 16 or 48K Spectrum, with text 'windows', superscripts & subscripts and INPUT AT any part of the screen. A fully relocatable microdrive compatible machine code program, integrated with the Spectrum's normal PRINT, INPUT and LIST commands. Invaluable for serious Spectrum users.

PICTURESQUE

Dept YS, Picturesque, 6 Corkscrew Hill, West Wickham, Kent BR4 9BB

HISOFT
High Quality Microcomputer Software

ULTRAKIT is the most powerful interactive toolkit yet for ZX BASIC. All the features you will ever need:

AUTO BREAK COPY DELETE EDIT FIND GRAB HIDE INFORM JOIN KEY LOSE MOVE NUMBER ONERROR PUT QSEPARATE RAMTOP SUBSTITUTE TRACE UPDATE VARIABLES WARN CRUNCH1 CRUNCH2 REMKILL PACKER MAP UCASE LCASE CTIME ATIME ALARM PRINTER KMODE RESET and much more. It comes with a FREE tape header reader.

C combines high-level structuring with direct control over the machine, all at compiled speed. Our compiler is now available from good retailers, and has proved extremely popular. It supports all statement types (plus inline code) and over 40 operators; whilst char, int, unsigned and combinations using pointers, arrays, structures, unions, functions, and typedef are all allowed data types. External and static variables can have initializers, whilst auto variables support recursion. There are six preprocessor directives and over 60 library functions with a selective inclusion scheme.

FONT 464 is an easy-to-use program enabling you to design, edit, and save your own characters and graphics for simple use in BASIC programs. There are 6 pre-designed fonts and sophisticated printer-driving software which allows high-resolution screen dumps and letter writing on Epson compatibles or the DMP1.

DEVPAC is a complete machine code development package. It is the second one that many people buy, because after the first one they know what to look for! The 'front panel' debugger is the only way to really see programs in action, and assembly from multiple source files is fast enough to satisfy its most demanding users – ourselves.

Pascal is a valuable educational and development tool as well as running typically 40 times faster than a BASIC equivalent. Our compiler is an almost full implementation which compiles direct to machine code (no slow P-codes). Multiple file inclusion allows very large programs to be compiled.

MON QL is our latest product and our first on the QL; it was written by Andy Pennell, who has a great deal of experience on the QL. It is similar in style to the well-known MON 'front panel' in DEVPAC and includes additions like job control and multi-tasking support. It also catches system exceptions and includes fixes for QDOS.

Product Price Table

	Pascal £	DEVPAC £	C £	ULTRAKIT £	FONT 464 £
ZX Spectrum	25-00	14-00	25-00	9-45	
Amstrad CPC464	29-95	21-95			7-95
MSX	29-95	19-95			
CP/M-80	39-95	39-95			
Sharp	39-95	25-00			
Sinclair QL		19-95 (MON QL)			

All prices are for cassette versions (except CP/M and QL) and include VAT and p&p in the UK. Please contact us for export orders, disc formats or detailed technical information packs. All products are available by mail order: please send a cheque or Postal Order. Sorry, we do not accept credit cards.

FRANKIE GOT TO HOLLYWOOD

With help from electronic instruments.

JOIN THEM... with the help of Electronic Soundmaker & Computer Music Magazine.

ON SALE NOW

FREE MUSIC SOFTWARE

JUNE ES&CM turns your Spectrum into a powerful musical sequencer: a high-spec, pro hardware/software package giving you complete control of up to 8 'MIDI' instruments. You don't have to be a musician to use it. You don't have to be an engineer to build it. And ALL the software you need is on our regular free tape.

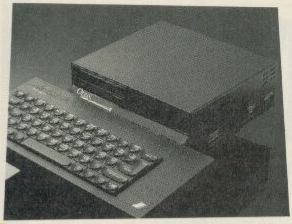

COMPUTERS IN MUSIC

ES&CM have got it taped - literally. Every month, THE leading electronic music mag brings you the people and products behind today's hits, in print, and on tape.
EVERY MONTH - 60 minutes of music, interviews, reviews - and software.
EVERY MONTH - Electronic Soundmaker & Computer Music

IN PRINT, ON TAPE - A CRUCIAL COMBINATION

COMPETITION

DESERT ISLAND DISKS

Our competition castaway this month is ... you! But dwelling on our desert island could lead you to an important discovery — an Opus Discovery. Here's your chance to win one of five fantastic disk drives, worth a grand total of £1,000!

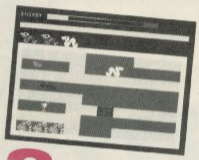

1

Suddenly, a storm breaks. You're tossed this way and that, until salvation comes and you're shipwrecked on the sun-soaked strand of a desert island. But for you there's no Bible, no Shakespeare, not even eight records and a gramophone.

All you've saved is one slightly soggy Speccy and five salt-soaked pieces of software. Trouble is, all the inlay cards have become totally unreadable and only the screen shots survive. Your task is to match those shots with the name of the game as it appears on the cassette labels. Forget all that guff you've read about constructing a shelter, hunting for food and building fires for passing ships. They're not going to help you get your hands on this month's luxury item — a two hundred quid disk drive!

RIDDLE OF THE SANDS

Take a look at the five screen shots opposite and match them up with the appropriate game description. If you think that description A goes with screen shot 3, then your answer will be A3. Couldn't be simpler, could it? And if you're still stuck, perhaps you should have a quick perusal of past issues of *YS* that you just happen to stumble upon on your palm-fringed beach. (*YS certainly reaches the parts other mags cannot reach! Ed.*) Once you've got them all sorted out, suggest a game you would take to a desert island if you were only allowed one. And then tell us why.

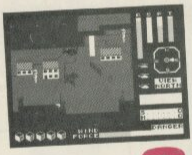

2

MAGNUM OPUS

You'll have read about the Opus Discovery in last month's Frontlines (and if not, why not? Ed), but to recap here's the impressive list of its features. It uses 3½" disks and has a joystick interface, a peripheral through connector, a parallel printer port, a monitor output and an on-board power supply. Best of all, it was designed specifically for the Spectrum so it slots directly into the back. Now that's not bad for £199.95 but it's truly amazing for free! Just think of all that memory and the new-found reliability.

So, stop playing sandcastles and start scribbling now. Bung your completed coupons in an envelope and send them to Opus Discovery Compo, Your Spectrum, 14 Rathbone Place, London W1P 1DE. And remember to put your winning combination of letters and numbers on the back of the envelope.

3

OPUS RULES OK

Entries for the Opus Discovery Competition must be post-dated no later than 30th June 1985. Each entry form must have the combination of five letters and numbers and your own choice of desert island software. The letter/number combination should also be marked on the back of the envelope.

The Editor's decision is final and no correspondence will be entered into regarding this decision.

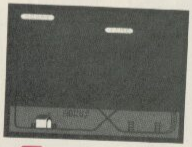

A 'Chute down to rule this ever-green land.

B Out of ocean, into jungle, me big monster!

C Use sabre to battle off nasties.

D Romantic encounter with creepie-crawlies.

E Up, up and away — chop-chop!

4

5

I was all washed up until I discovered the following answers:

A..... B..... C..... D..... E.....

If I could choose to take only one piece of software to a desert island it would be:

.....

Because .....

.....

.....

Name .....

Address .....

.....

.....Postcode .....

Now don't bother putting this message in a bottle and floating it to us, just put it in the post pronto to Opus Discovery Compo, Your Spectrum, 14 Rathbone Place, London W1P 1DE.

MAGAZINE HEALTH WARNING
If you think it's diskusting and diskraceful to desekrate your copy of *YS*, why not send a photocopy instead?

NEW

TAPE COPIER 7

Yes it can be done! Make security BACK-UP COPIES OF THE MAJORITY of your SPECTRUM programs including HIGH SPEED loaders, and JERKY leaders with TC7. A good "clean" copy which will hopefully suit your system. Other methods have proved limited.
★ includes BAUD RATE (speed) measurer.
★ can save high speed/jerky parts in "normal" form for DRIVE transfer.
★ so many extra features we can't possibly list them here. Just try it and see. As the market leader we can't afford to let you down. COST ONLY £6.50 (or £7.50 with MT6 — see below).

NEW

MD1b/WD1b for TAPE TO DRIVE TRANSFER

You now have a CHEAP but FLEXIBLE means of transfering your programs with our information sheets and software (not limited to a small list). Get much satisfaction and learn at the same time.
To transfer most programs to MICRO/WAFA/DISC drive you MUST have this program. It gives you the tools to convert programs so that they will run on your drive. Includes ability to cope with v.long programs, can split/chop bytes in one go, "VAL" creator, REMkill, make Visible, etc, etc. FULL manual with example transfers. (also need TC7 for latest programs).
MD1b (WD1b for disc or Wafadrive owners) costs a mere £6.99.
EXTRA program to CONVENIENTLY transfer converted bytes directly to m/drive with many other features (e.g alter program names, stop programs, etc) buy MT6 at £3. (Wafadrive version is called WAFATAPE at £4).

NEW LERM INFORMATION SHEETS
Gives you DETAILS required to transfer a selected number of the more difficult POPULAR programs. Sheet 1 now available at £2 plus SAE (mark letter LI1).
UPDATE SERVICE: for latest version on your LERM product send old tape + large SAE to get a £2 REDUCTION. **OVERSEAS:** add £1 Europe, £2 others for each product. **SAE for enquiries.**
ALL PROGRAMS CARRY OUR MONEY BACK GUARANTEE (not updates)

LERM, DEPT YS, 10 BRUNSWICK GDNS, CORBY, NORTHANTS.

THE VIKINGS ARE COMING!!!

SWESCOT are proud to announce that we will soon be releasing several top quality programmes on the international market, made by some of Sweden's most proficient programmers.
And best of all.....PRICES FROM **£1.99**
Du som bor i Skandinavien och söker bra program till din hemdator.

KONTAKTA OS!!!

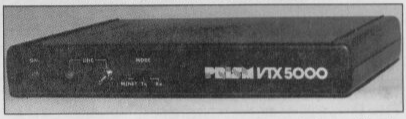

Vi har det mesta som finns i denna tidning till ***samma*** laga priser som gäller i England. Dessutom far vi in alla nyheter ***samtidigt*** som de släpps i England.

OBS!!! Vid katalogbeställning v.g. medsänd 5: – Skr i frimärken för portot.

YOUR SPECTRUM MODEM OFFER

Dial yourself up a great deal — save £££s on a Prism VTX 5000 modem!

Have you ever wanted to have a peek at Prestel, chat to friends on a Bulletin Board or access one of the big databases? You have. Then *YS* has some good news for you! Now you can save £££s on our special modem offer, exclusive to *YS* readers.

We're offering the Prism VTX 5000 modem at the exceptional price of £49.95, plus £3.95's worth of user software absolutely free. And that's not all — you'll also receive a free quarter's subscription to Micronet 800 and Viewfax. Purchase the complete package and a whole new world will immediately open up to you.

The VTX 5000 is a smart black box that'll sit neatly under your Speccy. And because it doesn't need its own power supply, there's only one lead between you and the outside world. The modem is BT approved and provides 1200/75 baud.

Even better, your new modem can save you money. Think of all that free software just waiting to be downloaded into your computer. And all for the cost of a local phone call.

As well as entertainment, you'll find all the information you could ever need right at your fingertips. Plus you can now go to the shops and the bank without setting foot outside the door. Whatever you want, it really is only a phone call away. But remember stocks are limited and at this price you'll never again buy a modem cheaper.

I want to tap the power of my telephone, so rush me my Prism VTX 5000 modem.

I enclose a cheque for £49.95 for each modem, made payable to **MODEM HOUSE** and I realise that this all time low price includes the user to user software worth £3.95.

Complete the coupon (or a photocopy of same) and send it with your cheque or Postal Order to **Modem House, Iolanthe Drive, Exeter, Devon EX4 9EA**. Please allow 28 days for delivery.

SNAP CRACKLE POP!

If you thought all had gone quiet on YS MegaBasic, keep listening 'cos we're about to break the sound barrier. Prepare to have your ears pierced by L A Privett's program on the MegaBasic PLAY command.

By now you're probably a pretty efficient *MegaBasic* programmer. You've mastered Procedures, you're magic with the Sprite Handling commands and no window is closed to you. What d'you mean, no! Keep watching and all will be revealed in future issues. But this month it's the turn of the PLAY command. Do all the megaprograms you've created still lack a mega backing track? Up till now it's been hard work to PLAY.

The reason's clear — it can start to sound a bit silly trying to convey in words the sort of sounds your Spectrum's now capable of. What would you think if you read this in the manual? 'If you put the value 12 in the last parameter, you'll get a PHUTT sound — on the other hand a number 9 will make the sound PHIZZ...' Get the picture?

To get round the problem, here's a small program that'll demonstrate the possibilities of *YS MegaBasic*'s PLAY command in the privacy of your own home — and save the sub-editor from any untoward embarrassment!

Type the listing into your *MegaBasic* system, RUN the program and up will come a display showing the current parameters of the PLAY command. Use the up/down cursor keys to choose which value you wish to change and then increase or decrease it with the left and right cursor keys. When you're ready to play back the sound you've created, press the space bar and wait for the assault on your ear 'oles. The parameters you chose will also be displayed on screen.

If you want to use the sound again in one of your own programs, then jot down the figures and keep them safe for later use. The trick is to find a way of remembering exactly what sort of sound your Speccy produced — which could mean going back to the phutts and the phizzes. Oh well!

SPRITE MAGIC

For all of you who haven't got megasprites sussed yet, here's a demo from Mike Leaman.

```
  1 POKE 56894,255
```

Line 1 This line marks the end of the 'Sprite Info area'. You should use this at the start of every program that uses sprites.

```
10 CLEAR 44855: LET P=44856
```

Line 10 This line clears the space above ramtop for the image info

```
 20 FOR S=0 TO 3
 30 READ A,B,C,D
 40 POKE P,A: POKE P+1,B: LET
P=P+2
 50 FOR Z=1 TO 14: POKE P,C:
POKE P+1,D: LET P=P+2: NEXT Z
 60 POKE P,A: POKE P+1,B: LET
P=P+2
 65 FOR Z=0 TO 3: POKE P+Z,6:
NEXT Z: LET P=P+4
 70 NEXT S
```

Lines 20-70 Set up the image info

```
 75 POKE 56750,255
```

Line 75 Turns all sprites off

```
 80 FOR Y=0 TO 7
```

Line 80 Use eight sprites

```
 90 LET S=56750+18*Y
```

Line 90 Gets address of individual sprite info

```
 95 IF Y=0 THEN  GO TO 110
```

Line 95 Checks that first sprite isn't turned on

```
100 POKE S,1
```

Line 100 'OR' sprite onto screen and sets the printing mode

```
110 POKE S+1,115: POKE S+2,80
```

Line 110 Sets x and y start positions

```
120 POKE S+3,S-RND*10: POKE S
+4,5-RND*10
```

Line 120 Sets random x and y movement

```
130 POKE S+5,1: POKE S+7,4
```

Line 130 This line moves the sprite every interrupt, then tells the sprite routine that there are four images

```
140 POKE S+9,4: POKE S+15,6
```

Line 140 Changes image every four interrupts, then sets rub-out to yellow ink and black paper

```
145 POKE S+8,RND*3
```

Line 145 Starts each sprite at a random image

```
150 POKE S+11,56: POKE S+12,1
75
```

Line 150 Defines beginning of image data for each sprite

```
160 NEXT Y
```

Line 160 Loops back eight times

```
165 POKE 56750,1
```

Line 165 Turns all sprites on

```
170 LET S=56750+18*INT (RND*8
)
```

Line 170 Alters its direction randomly

```
180 POKE S+3,5-RND*10: POKE S
+4,5-RND*10
190 GO TO 170
```

Line 180 Loops back and repeat again

```
200 DATA 255,255,129,129,63,2
52,33,132,15,240,9,144,1,128,1
,128
```

Line 200 This is the data for image info

```

BACK IN TOWN FOR A GREAT NEW SHOW!

MICROFAIR

If you have a Sinclair Computer this is the show you can't afford to miss!

The great day is June 22nd.

One day you won't forget if you own or use a Sinclair Computer.

The Microfair is back in town.

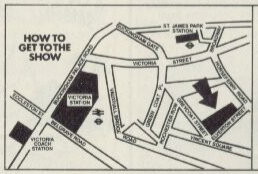

See everything that's new and original for The Spectrum, Spectrum+ and the fantastic QL.

If it's just launched you'll find it at the MICROFAIR. If you want advice you can talk face to face with the manufacturers. If you can't find it in the shops you'll probably find it at the MICROFAIR.

It's the user-friendly show that has out-lasted all the rest because everyone enjoys themselves . . . and you can always find a bargain!

Why not send today for cut-price advanced tickets.

EXHIBITORS: CALL MIKE JOHNSTON ON 01-801 9172 FOR STAND AVAILABILITY.

Underground: Nearest stations are Victoria, and St James's Park.

British Rail: Victoria Station.

Bus Routes: 11, 24, 29, 70, 76 and Red Arrow 507.

Road: Signposted (RAC AA) Horticultural Halls.

POST TODAY

Send to Mike Johnston (Organiser), Dept YS , ZX Microfairs, 71 Park Lane, London N17 0HG.

Please send me ..... Advance Tickets (Adult) @ £1.25
Please send me ..... Advance Tickets (Child under 14) @ 80p.
(Prices at the door are £1.50 and £1.00

JOYSTICK JURY

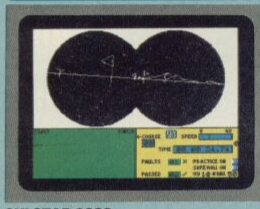

YS

Guilty's the cry as our joystick jurors send another game to the guillotine. Dare you hold a different opinion during their reign of terror?

WARNING!
Just in case you find our scoring system too confusing, here's what it's all about. The score out of five at the end of each person's review is based on their experience of the game. But that's pretty subjective . . . so they also use the HIT and MISS system to indicate its potential as a commercial success.

Judge, jury and executioner, all rolled into one — *Dave Nicholls*, *Roger Willis* and *Ross Holman* — pass sentence on this month's selection of supreme Spectrum software.

SKI STAR 2000

Richard Shephard Software/£7.95

Dave: Here's one to play in the fridge for added realism! This game aims to do for skiing what *Fighter Pilot* did for flying aircraft.

Graphically, it's got promise, giving you a goggle-eye view of the course with line drawn flags, pylons, and other hazards. But the best bit is its flexibility.

There are fifteen different courses and for each one you can choose the shape of your goggles, the amount of falling snow and so on.

In fact, all four of the courses can be completely altered using the built-in editor. It works on the Icon principle (like the Apple Macintosh), so you just move the cursor over the representation of the item you want and press fire. By pressing fire again, it will 'drop' the item into place. There's even a waste bin for the unwanted articles.

As simulations go, this is a cracker, the editor is excellent and I had a lot of fun designing leg-breaking courses.

If you're into simulations, take a look, otherwise save your shillings and shell out on trip to the slopes **3/5** **HIT**

Roger: Desperately peering through dirty goggles got me seriously piste off, or was it off the piste? **1/5** **MISS**

Ross: An original idea that doesn't come off. As a ski-ing simulator it's just too slow. This one's downhill all the way. **2/5** **MISS**

SPY HUNTER

US Gold/£7.95

Roger: As the wrapper sez, this is hardly a game, and with the throwaway line like that, US Gold aren't telling any lies. It's actually another driving number crossed with a liberal dose of shootiebangs. The action occurs on a scrolling map illustrating the road or waterways available for pursuit and destruction of a nasty collection including Road Lords, Switch Blades, Barrel Dumpers, Enforcers, Copters and yer actual Doctor Torpedo. (*Any relation to Dr. Findlay? Ed.*)

Apart from steering the 'vehicle' either on land or the blue-representing-wet stuff without crashing, the player is required to insert it back into a 'weapons van' at periodic intervals, for replenishment of ammunition, bacon sarnies or whatever. The unpleasantries which share the passing scenery have to be dealt with in various terminal manners, or avoided altogether. Really, controlling this optimistically called 'turbo-charged race car/hydro speed boat' could be a satsifying business if one was only born yesterday. For those of us who've been around it stands out as an exercise not a little long in the tooth. As the man said, been there, done that before ... **2/5** **MISS**

Ross: The name's Bond, James Bond — and all I've got to say about this car classic is no, Doctor No! **1/5** **MISS**

Dave: This one's fast and it's tricky and if you're not careful it'll drive you up the wall. If only it actually got somewhere. **2/5** **HIT**

GRAND NATIONAL

Elite/£6.95

Roger: Offering an each-way bet on punter interest (aarghh!), *Elite* has combined most facets of Aintree's only claim to be anything other than a centre of unusually high unemployment. After all, isn't it better to train people to infest the bookie's rather than hang about on street corners?

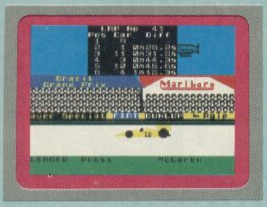

The packaging has the essential form guide, which introduced rank outsiders to the opening screens of listed equestrian delights, whose odds change as racing history progresses. Besides the opportunity to spread basic stake money through the field, a player is also given the chance to take Spectrum reins in hand, riding a chosen nag.

The thunderous assault in Liverpudlian turf is represented by a sectionalised action profile of your trusty steed. This allows judgement of fearsome hedge approaches, and an aerial 'plan' view of fences, jumps and all the other old donkeys thrashing about, to facilitate barging one's way through to the front ... This is one game that ain't gonna be pulling a 48K milkfloat the day after. **5/5** **HIT**

Dave: This is a pretty safe bet. It could be a touch faster in the race sequence but the horsey graphics are well observed and the betting side of it adds just the right amount of excitement. Go on, 'ave a flutter! **4/5** **HIT**

Ross: Too slow for a true arcade and the graphics reminded me of those 'flick' books. If you don't go down the bookies, don't bother. **2/5** **MISS**

JOYSTICK JURY

FORMULA ONE

CRL/£7.95

Ross: Arcade addicts expecting all the thrills 'n' spills of the race track, read no further. This is a management game.

You're in control of a Formula One racing car team for a complete season, with the aim of winning the championship.

Before the season starts you choose your sponsor who will generously dish out large dollops of cash to spend on the little neccessities of life, like drivers and cars. The drivers are all listed according to their price tags, with the top notch names like Prost, Piquet and Lauda fetching fortunes of £150,000. Then you have to get your team in race trim which means splashing out more money on car engines and pit crew.

On the big day you just have to make the critical tyre choice according to the weather reports. There's no qualifying and you'll automatically be allotted a grid position. The race display shows a section of the track, a time board and the stands at the start and finish line. And then they're off. The bottom two lines of the screen take the role of Murray Walker and James Hunt offering the low-down on the race. At the end of the race your sponsor will lash out more lolly.

This isn't quite the pits, but you'd have to be a Formula One fanatic to find it fascinating for long. **2/5** **MISS**

Roger: A classic case of missing a creative gear makes sure that this game fails to get off my starting grid. **1/5** **MISS**

Dave: I found it tricky getting started but once I'd got the hang of it, I hung around for a lap or two. **2/5** **HIT**

BRIAN JACKS SUPERSTAR CHALLENGE

Martech/£7.95

Roger: Real live physical exercise always seemed silly to me but simulating it on Spectrum is even sillier. Prejudices apart, I can only imagine that such a combination of TV personality name-dropping and this collection of visually naff sporting fixtures is supposed to scoop up any leftovers from 'Decathlon' and its ilk.

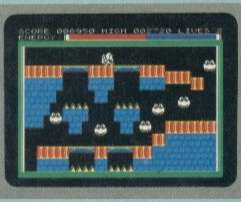

Running, cycling, archery, footie, swimming and the dubious delights of squat thrusting (*pardon? Ed.*) are included, demanding a great deal of mindless and finger-cramping button or key repeat to get our boy elbowing Brian from the podium.

Keyboard users had better be still in the protective shadow of Sir Clive's warranty because they're likely to need it. Sinclair has heard of circuit and membrane faults but sporting injuries are worth a try ... Quite honestly, if you want to keep fit in an armchair there are better ways than this athletic tosh. **0/5** **MISS**

Ross: If you're not soon bored by bashing the keys or jerking the joystick, you'll tire of having to load each event. **2/5** **HIT**

Dave: My joystick ran for cover when I showed it this — it needn't have worried, I only played it a couple of times before I got bored.

It says on the inlay card that Brian himself reckoned 'It had better be good'. I wonder if anyone's got the bottle to show it to him yet. **1/5** **MISS**

BUG EYES

Icon/£5.95

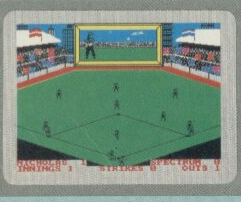

Ross: Well, I'll be bug-eyed. Agent Starman's our hero in this game — but haven't we been here before? Alien Space craft bent on the destruction of civilisation and eventual domination of the galaxy. You have to penetrate the ship and press on through its power generator. Sounds familiar? Like 99 per cent of all previous space-age shoot 'em ups!

The little space-suited chappy can move left or right and drop any distance without suffering noticeable brain damage. The ship's populated by a scruffy assortment of crushers, bug-eyed monsters and spiders, all of which prove harmful to prolonged existence if touched. You'll also have to negotiate bridges that appear and disappear and the old stand-by, moving platforms. At the top of the screen is an energy bar that gradually reduces until you top it up by completing a screen. You can wave goodbye to another life if this reaches zero.

Each screen's a colourful concoction consisting of various blocks that form walkways and bouncing nasties that pose some tricky timing problems. No way is this original, but the screens take some thinking out if you're to get through. **3/5** **MISS**

Roger: It takes more than ten screens of intergalactic body-swerving to get me bug-eyed. **2/5** **MISS**

Dave: A pretty proficient, perambulating platform game with very smooth graphics. Why aren't there more screens though? **3/5** **HIT**

WORLD SERIES BASEBALL

Imagine/£6.95

Dave: Imagine is alive and well and living on its former glory.

World Series Baseball is another sport simulation, just as the sport is just a Yankie simulation of rounders! You have to pit your team and your wits against another player or the computer. To help you the screen shows a commentators eye view of the field with a large 'video screen' at the back displaying close ups of the Pitcher and the Batter during the game, and of the Cheerleaders between innings! (*whoopee! Ed.*) The teams alternate between batting and fielding and as far as I could tell, all of the standard rules of baseball are observed.

When batting you have control over one player at a time while the rest of your team looks after itself and runs about a bit to create the illusion of something happening. When fielding you control the player that the computer decides is in the best position to retrieve the ball (just like *Match Day*). You've also got some control over the flow of the game by changing the angle the ball is pitched at and the timing of the batter.

Still the reasonable graphics, and the slight strategic element, didn't take the game close to a home run for me. **2/5** **MISS**

Roger: Smart sporting scenery almost makes up for lack of content, but it looks better than it plays. **3/5** **HIT**

Ross: The big video screen at the back's a real stunner. But as I never got a man passed second base, I'm gonna need some more practice before the Detroit Daredevils come a knocking. **3/5** **HIT**

NEXT GREAT ISSUE MAY 23

On sale every month at all good newsagents, price £1

MICRO CHALLENGE . . . the first computer-age puzzle magazine

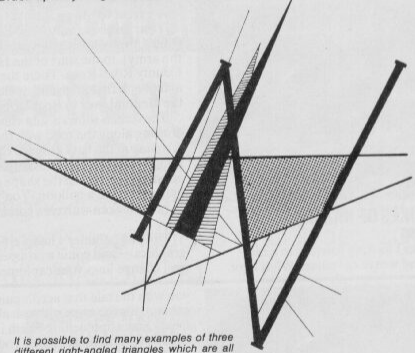

No, not another computing magazine. Micro Challenge is unique. Colourful and exciting, it's packed with intriguing puzzles — and prize competitions — devised specifically for microcomputer owners.

WIN A COLOUR TV!

This is an example of one of the many types of puzzle to be found in Micro Challenge — but it's also your chance to win a superb JVC portable colour television with remote control. Solve the problem, using skill, judgement and your own micro, then send the solution, on one of the prize puzzle entry forms from the May/June issues of Micro Challenge, to the address given in the magazine, marking the coupon AP1. (A proper form must be used; no photocopies or facsimiles are permitted). The competition closes first post on June 17, 1985, and the first correct entry opened wins the prize.

TRIANGLE TANGLE

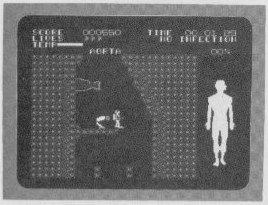

Brush up on your geometry to unravel the answer.

It is possible to find many examples of three different right-angled triangles which are all equal in area. Can you, however, find three such triangles for which every side is a whole number of units (an integer)? Try to devise a program to find the trio with the smallest possible area.

Moving at the speed of light you could still snap up our fabulous launch issue. Order a regular copy from your newsagent now. Details of subscriptions or postal deliveries contact:
MICRO CHALLENGE
Somers House, Linkfield Corner, Redhill, Surrey RH1 1BB

JOYSTICK JURY

FANTASTIC VOYAGE

Quicksilva/£6.95

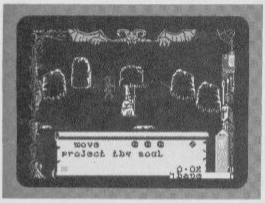

Ross: Like the film of the same name, this game finds you inside the body of a scientist in a last-ditch bid to stop him kicking the bucket. Unfortunately the minaturisation process hasn't worked too well and your submarine-come-surgical scalpel has broken up and been scattered through the body. Your task is to re-assemble the sub and to keep your host alive.

You swim around the tubes and intestines wearing a wet suit and flippers, and carrying a laser — it gives a whole new meaning to a life-saving swim. The laser is vital as it's your only means of knocking-out the body's defence system. Also watch out for your own energy levels — if they drop too low, you become invisible and you'll have to find some red blood cells to replenish them. The host body is also under attack from infections that cause a rise in temperature and eventual death if not treated rapidly, so be prepared to launch a rush rescue mission to blast the anti-bodies.

You'll also have to deal with growths, cholesterol blockages and viruses — it's enough to persuade you to chuck it all up now! Biology was never this boring, so don't go forking out an arm and a leg on this one. Rigamortis set in far too swiftly. **2/5** **MISS**

Roger: Slithering round inside somebody's vitals looking for diseased tissue and scrap metal ain't my idea of fun ... **2/5** **MISS**

Dave: Is this the first game to be written in body language? Shame that it's missing a couple of things that were in the film — Raquel Welch, for example! **2/5** **HIT**

DRAGONTORC

Hewson/£7.95

Ross: Here it is, the follow-up to *Avalon*, featuring the same graphical furniture but with a finer back-drop. Your quest is to seek out the five crowns of Britain and free Merlyn from the evil grip of Morag the Shapeshifter (*and don't try saying that when you've had a few! Ed.*).

The game comes with a map of the Realms of *Dragontorc* and a potted history of the story so far. You control the familiar figure of Morac by choosing the move spell from the scroll displayed at the bottom of the screen.

You've also got two other spells at the start — the servant spell does all the graft by providing you with a hard-working sprite that runs errands and fights, and there's also the Bane spell. That's much more mysterious and I'll leave it to you to discover how to use it!

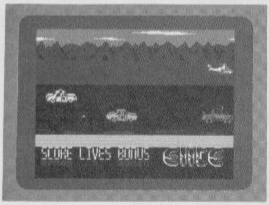

There are about 256 locations to explore and over 80 characters — or so it says here.

I didn't get that far and I reckon it'll take quite a while for someone to crack it.

If you liked *Avalon*, you'll love this. I found both of them to be dreary dark-age dramas — not a patch on Dallas. **3/5** **HIT**

Dave: It's an improvement over the original but I still rate this as a triumph of programming over playability. **2/5** **HIT**

Roger: Ding-dong! It's Avalon calling again ... More of the same and just as satisfying. **4/5** **HIT**

THE DUKES OF HAZARD

Elite/£6.95

Dave: Was I looking forward to a nice dodge and weave car chase! What I got was a great let-down.

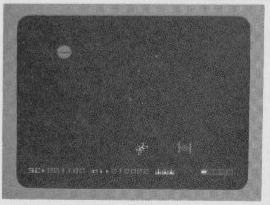

Your task is to motor the General Lee (that's your wheels, not some big wheel in the army), to the start of the Hazzard County Road Race. There the Duke Boys aim to win first prize and avoid handing the General over to Boss Hogg.

The screen shows a side view of the cars cruising along the road with the mountains scrolling in the background. Chasing you is the Sheriff as well as a couple of airborne enemies in the shape of a helicopter and a balloon. You've also got to play chicken with cars coming the other way.

The programmer's had a crack at 3D graphics — and come a cropper — when you change lines your car appears to move backwards and forward but the collision detection just can't handle it. And what wally chose the controls? You have to hit a key repeatedly (or wiggle the joystick) just to accelerate, which is a complete waste of time and energy. This game's an OK sort of idea with some decent graphics — it's just a shame about how it was done. **1/5** **HIT**

Ross: New graphics and a new name don't add up to a new game. And you'd think they'd have done a better job on the collision detection in a car-chase game. **1/5** **MISS**

Roger: Lacks the precision of control necessary for exciting crash-bang-wallop driving stuff and it's just not funny enough. **2/5** **MISS**

DEATH STAR INTERCEPTOR

System 3 Software/£7.95

Ross: Yep, you guessed — it's a *Star Wars* rip-off with solid colour graphics. It's even got the *Star Wars* theme tune. I won't tire you with the tale that accompanies the game — it's the usual old tosh about the Death Star approaching Earth in order to destroy it. You must launch your Starfighter with the aim of confronting the enemy.

The game's split into three stages, the first launching sequence requires little skill and less strategy and soon becomes very boring. The snippet of software speech saying 'prepare to launch' sounds like the speaker had a nasty dose of flu when it was recorded. The second stage, out in space, shows your fighter desperately trying to avoid destruction from the barrage of enemy fighters constantly bearing down on you. Rather than battle it out with them it's best to avoid the bulk of them and shoot only those you can't avoid. Quite a doddle as there's a 'dead zone' where you can sit it out in safety.

The final stage in the trench is not pulse-quickening either, and the final explosion's just a flash in the border. So much for saving civilization. I'd heard good reports of this game but it's arrived with a whimper, not a bang. **2/5** **MISS**

Roger: Three stages of Star-Yawns didn't keep me awake long enough, despite tolerable speed and shootiebang quotient. **1/5** **MISS**

Dave: Zap Ping Whoosh Yawn! another fast, almost 3D shoot 'em up with reasonable graphics, the usual storyline and a boredom factor of 10! **1/5** **MISS**

FINDERS KEEPERS

Mastertronic/£1.99

Dave: Judging by the standards of the early cheapo games you would've been forgiven for thinking someone had misheard 'budget' for 'bodge-it'.

This game certainly changes all that. There's nothing particularly new about it — we've seen platform games before (*just a few! Ed*) but there are a number of unusual differences.

For a start, not all the playing area is divided into rooms — there are some rather nice scrolling mazes tucked away in there.

Then there's an extra element to the game that really makes it. Some of the objects that you'll find combine to make a third, and you can then start bartering for other bits with the Castle traders.

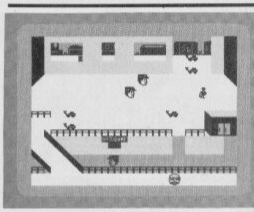

The whole point of all this hunting and haggling is that you have been sent by the king to find a birthday present for his daughter.

The 'finders keepers' of the title just means that once you've nabbed the treasure, you can stash it away for yourself. It's a shame we're not informed of the king's reaction to this bit of private enterprise.

Fortunately, the plot ain't that important so you're not likely to lose your head. So, if you find it, keep it! **5/5** **HIT**

Roger: I'd rather have kept the king's daughter than her birthday prezzies but hopping about to cop the loot was worth it anyway. **4/5** **HIT**

Ross: A colourful, well presented game. Searching for treasure gives that bit extra to life above the competition — and at this price, it deserves to be a ... **4/5** **HIT**

A DAY IN THE LIFE

Micromega/£6.95

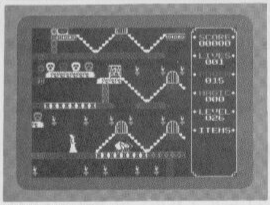

Dave: At last, good old Uncle Clive has finally received the recognition he deserves. Today's the day he has to toddle off to Buck House to collect his gong as a Dame Commander of the British Empire (*bet he's chuffed. Ed.*) On the way, he's got to cope with all the aggro of commuting, like avoiding the British Rail staff (though I always thought finding them was the tricky bit). Along the way he's also got to eat, drink and be merry.

Using the keyboard or joystick you have to control Clive — or rather his head. Now we all know he's a brainy bloke, or he wouldn't have invented the Speccy, but only showing his bonce is a bit bad! It's up to you to manoeuvre his noddle around the numerous screens collecting the booty in the correct order.

The rest of the graphics are OK I suppose, but the game gets a trifle tedious because of Clive's finicky ways. He just won't do what you want unless he's in exactly the right places. A slight miscalculation and you've lost a life as well as his body. A good 'cheapie' game being sold at full price! **2/5** **MISS**

Roger: This could have been a satirical savaging of Sir Clive or it could have been a good game. It's neither. **1/5** **MISS**

Ross: A multi-screen dodge and run game that traded on a guest appearance by Uncle Clive. It kept me awake for an hour or two, but I've had better days. **3/5** **MISS**

MIGHTY MAGUS

Quicksilva/£6.95

Roger: With a name like a make of German articulated lorry, a chap could almost hope for a new set of platform imagery but it's not to be found here. Sorcery is something we appear to be stuck with. At least this reel of software mystics is competently assembled.

The plot consists of negotiating our wizard-clone hero through thirty scrolling levels of the 'Rising Sun Temple', searching chests and scrabbling through interesting piles of garbage like a folkloric tinker. Spell-casting and fight options are available for defence and advancement as the quest for Fraugy The Fierce continues up, down and across a magical minefield of behaviourally unsporting geography. Traps and nasty surprises abound, whilst witty graphical images portray temporary concussion or funerals faster than the Co-op's cheapest, upon loss of life. Originality is not one of the Magus's strongest character traits but it kept me out of the pub — for a while at least. **3/5** **HIT**

Ross: There's more sense of adventure than usual in this arcade/adventure, but there's little else to recommend it. And why spoil it with the unpredictable magic squares and the random generation of the playing area? Mighty it's not! **2/5** **MISS**

Dave: Wot, no joystick option? It's not exactly magic, but the randomly designed playing area makes it much more of a challenge, so even ace arcaders should take some time to crack it. **2/5** **HIT**

STOP PRESS!

***Minder*, the new game from dk'Tronics arrived too late to go in Joystick Jury — that or someone's slipped a few sovs to our jurors.**

"'Ere, Tel, I've just stumbled on a great little earner."

"Wot is it now, Arfur? Is it bent?"

"Bent? Me? Course it's not bent. I've just done a deal with this computer company."

"You haven't bought any a them Commodore 64s 'ave you?"

"What d'you take me for, Terry? No-one's that stupid! No, they want to write a computer game about us. All we 'ave to do is go round a few of the old haunts, you know, like the Winchester Club and my lock-up and do a few deals with some of the lads. Strike up bargains just as if we was doing 'em. I'll just be buying in some liquidated or fire damaged stock, all good stuff mind, and you go round collecting and delivering it."

"I knew there was some sort a catch."

"You'll get your cut. Money's all you ever think about, Terry. You're becoming very materialistic, if I might say so!"

"That's choice coming from you, Arfur."

"As I was saying, you pick 'em up, and I sell 'em again — at a heart-breakingly small profit, of course. Just to see how much I can clock up in two weeks. All the blokes'll appear — in little boxes round the screen and we can talk to them just as if they was there — Dave from the Winchester, Sargeant Chisholm ..."

"You never said nothing about the Ol' Bill. If there's gonna be rozzers around you can count me out."

"We can handle them, Terry, We're onto a real winner 'ere and it costs less than a pair of Lady Godivas! Trust me ..."

THE FREE YS CLASSIFIED AD SERVICE

The fun way to swop your software, hawk your hardware and make a name for yourself. And it's all for free. Be sure of your ad by filling in the form below.

» SOFTWARE

■ Swop *Dungeon Master, Pimania, Galaxians, Corridors of Genon, War o/t Worlds* for *System 15000*. Tel. (0247) 873318 and ask for Graham.

■ Lots of new software to swop. Your list for mine. Please write to Robin England, Church On The Way, Churchill Road, Thetford, Norfolk.

■ Swop my list of 250 titles for yours. Write to Mikael Dahlander, Ljuragatan 167, 60351 Norrkoping, Sweden.

■ Games to swop including *3D Starstrike, Atic Atac, JSW*. Tel. (0723) 375994 (evenings) and ask for John.

■ *Avalon, Pole Position, Jasper, Ghostbusters, Frank N Stein, Ad Astra, Monty Mole, Moon Alert, Eskimo Eddie*, etc to swop. Tel. 01-699 7093.

■ Will swop *JSW, Underwurlde, World Cup, Football Manager* for *Match Day, Mr. Wimpy, Speed Duel, Sabre Wulf*. Tel. Hemel Hempstead 45756 (after 5 pm) and ask for Darren.

■ Swop *Scrabble, Games Designer, Beaky, Eskimo Eddie, Ah Diddums* and more. Tel. 01-422 7583 (evenings) and ask for Peter.

■ Software to swop. Send lists to Brian O'Connor, 5 Almeida Terrace, Kilmainham, Dublin 8, Eire.

■ Swop *Muggy* for *Trashman*. Write to Thomas Connolly, 110 St. Aidan's Villas, Enniscorthy, Co. Wexford, Ireland.

■ Swop Artic *World Cup* for *Zombie Zombie* or *Cyclone*. Tel. (0633) 272309 (after 6 pm) and ask for Andrew.

■ Swop software including *Technician Ted, Great Space Race*, etc. Tel. (061) 303 9919 (5-7.30 pm) and ask for Gavin.

■ Will swop *Beach Head, Ghostbusters, Rap Scallion, Scrabble* and many more for such titles as *Turmoil, Kokotoni, Wilf, Jasper, Brian Bloodaxe*. Tel. 01-708 3269 and ask for Dean.

■ Want *Boulder Dash, Airwolf* and other good games. Have *Krakatoa, Scuba Dive, TLL, Boory*. Will swop two of mine to one of yours! Tel. (02357) 3160 (after 9.30 pm) and ask for Anil.

■ Swop *Dungeon Builder* for *White Lightning* or *Quill*. Tel. (0623) 558957 and ask for Robert.

■ Swop *Full Throttle, Dartz, Devils of the Deep, Transylvannian Tower* for *Jasper, Wheelie, Hunchback II*. Tel. 01-690 8589 and ask for David.

■ Swop *Akairaz Harry, Voyage into the Unknown* and *Jawz* for *Travel with Trashman* and *Booty*. Tel. (091) 274020 (after 9 pm) and ask for Richard.

■ Swop *Transversion, Zip Zap, Splat, Flight Simulation* for *Superchess, Draughts, Underwurlde, White Lightning* etc. Write to Mr. Ali, 37 Ulleswater Street, Bolton, Lancs.

■ Swop *VU-Calc, Picturesque Assembler, Cyber Rats, Whodunit, Address Manager, Space Station Zebra* for ZX Printer or MicroSpeech. Unable to deliver. Tel. (0908) 679661 after 6 pm and ask for Gavin.

■ Swop *Kung Fu, Lunar Jetman, Trax, Violent Universe, Pogo* for *Full Throttle, Hunchback II, Tir Na Nog*, or will give for a Currah MicroSpeech. Tel. Uxbridge 54651 and ask for Martin.

■ Have *Zip-Zap, Specires, Orbiter* and *Galaxy Attack*. Will swop for *Underwurlde, Knight Lore* or *Automania*. Write to J Clark, Melville Cottage, Lasswade, Midlothian, Scotland.

■ Swop *Blue Max, Rally Driver, Match Point, Dungeon Builder, Fighter Pilot*, etc. Send your list for mine to J D Howe, 24 Hillfoot Road, Collier Row, Romford, RM5 3LP.

■ Swop *Chequered Flag, Trans AM, Alchemist, Birds and Bees* and others for software/hardware. Write to Mark Owen, 46 Fore Street, Barton, Torquay, Devon.

■ Will swop *Hobbit* and *JSW* for *Quill*. Tel. (0634) 67408 and ask for John.

■ I have 500 games and wish to swop some of them, possibly for a Dk'Tronics light pen. Tel. (0867) 73269 and ask for desperate Graham!

■ Swop software including *Knight Lore* and *Gun Assembler* for *White Lightning* or *Machine Lightning*. Tel. (0872) 78520 (after 6 pm) and ask for Henry.

■ Will swop any two of *Hobbit, Lords of Midnight, Sabre Wulf, Sorcery* 1 with 12 games, for light pen. Any three for Currah MicroSpeech. Tel. (0532) 633271 (after 6 pm) and ask for Mick.

■ Swop *Match Day, Match Point, Kung Fu, Blue Thunder, War of the Worlds* and *Muggy* for *Ad Astra, Olympimania, Micro Olympics, Olympicon, Trans Express* or any three for *Eureka* or *White Lightning*. Any two for a Microdrive cable or all for Interface II. Write to Christopher Biggs, 5 Hayton Close, Coombe Valley, Teignmouth, Devon, TQ14 9UW.

■ I have Dk'Tronics Light pen, with software and manual. *Softtalk II, Bullseye* and *Zig Zag*. Tel. Chelmsford 59673 and ask for Leigh.

■ Would swop *Muggy, Strontium Dog, Cookie, Tranz AM, Centiped, Danger Mouse* for Dk'Tronics Light pen. Tel. (0377) 81687 (after 6 pm) and ask for Mike.

■ Swop *Sherlock* for *Abersoft Forth* or *The Quill*. Tel. Northampton 56472 and ask for Christopher.

■ I have *Light-Cycle, Space Raiders, Voyage into the Unknown, Galaxians, Super Spy, Espionage Island*. Swop one for *Sabre Wulf*. Tel. Wisbech 860618 and ask for Michael.

■ Swop *Kokotoni Wilf* and *Master of Serebal* for Interface II or other software. Tel. (0633) 272309 and ask for A. O'Connor.

■ Send any software you want to swop and sae — in return for software of same value. Write to Paul Cheung, 42 Bramfield Court, Queen's Drive, London N4 2XH.

■ Swop *Deus Ex Machina* for *Knight Lore* or *Underwurlde*. Tel. (04215) 67913 and ask for Geoff.

■ Swop with me and rely on a reply. Send your list for mine. All the latest titles. Write to Chris Colesell, 5 Crossway, Littleworth, Stafford.

■ Swop Hisoft *Pascal, Devpac*. Abersoft *Forth, JSW, Manic Miner, Sherlock, Kokotoni Wilf, Manic Miner, Sherlock, Hulk, Fred* etc. Write to Per-Anders, Carlsson Duukullg 11, 653 45 Karlstad, Sweden.

■ Swop any three of: *Match Point, Splat, Rapscallion, Strangloop, TLL, Ad Astra, Combat Lynx, Ant Attack, Underwurlde, Scuba Dive* and *Sabre Wulf* for Business Cartridge from Microdrive Expansion System. Tel. (0433) 50244 and ask for David.

■ Swop *White Lightning* or complete *Machine Code Tutor* or *Black Crystal* for Abersoft *Forth* or Picturesque *Assembler and Monitor*, or ROM Disassembly book. Write to Keith Dickinson, 43 Grundy Street, Westhoughton.

■ I have 600 programs to swop. Write to Raffaele Maruca, Via E. Toti 27, Saronno (Varese), 21047 Italy.

» HARDWARE

■ Wanted urgently — your Alphacom 32. I will swop £60 worth of original software plus loads of magazines, computer books and some cash. Tel. 091-285 4865, after 4pm, and ask for Robin.

■ Prism VTX 5000 modem for sale. £57 ono. Tel. Gloucester 863596 and ask for Michael.

■ Panasonic Answerphone £80, Scalextric — over £300 track and accessories — £85. Will swop either for 48K Spectrum and accessories. Tel. (0272) 211334 between 9 am and 5 pm and ask for Andrew.

■ 48K Spectrum, £80. Interface 1, Microdrive — at least 20 cartridges, £80. Dk'Tronics lightpen, £10. Currah MicroSpeech, £15. All brand new. All unwanted gifts. Tel 021-502 4589 and ask for Mr Singh.

■ Please!!! Does anyone want an Interface 1 Microdrive and 2 excellent Lerm programs and 2 cartridges. £70; Tel. 031-336 3588 and ask for David.

■ Kempston Pro 3000 joystick + interface must sell. £15 ono. Also *Crash* T-shirt for sale, unworn. (*Not surprised? Ed*) Medium size. £4.50. Gordon Ross, 51 St Helens Avenue, Benson, Oxford OX9 6RU.

OPPORTUNITY KNOCKS

Once in everybody's lifetime there comes a never-to-be-repeated opportunity. Miss it and it's gone forever. Take it and it could change your life. Big claims, you say but we think they're justified. Can you afford to pass this chance by...

So, you're a brilliant Speccy programmer but why haven't you been discovered yet? No-one's beaten a path to your door? Pressed pound notes into your paw? Forced you to drive round in a Ferrari? Well, why not?

What's that? — you've been too busy to write that mega-program that'll take the world by storm. You don't like Ferraris. Excuses, excuses.

KNOCK, KNOCK

Well, now there can be no more excuses. We're giving you one last chance to make your fame and fortune as a programmer and what a chance it is. Opportunity is knocking — will you close the door on it?

If you've written a program (or you're just looking for a chance like this to sit down and write one) now's the time to go for it. We don't mind if it's an arcade, an adventure, a utility or any other category you care to name. Just so long as it does what it sets out to do. If it's a game we want to have some fun! And a utility's going to have to work hard.

As far as restrictions go, there's really only one more. Your program shouldn't be any longer than 15K. Of course, that means the machine code maniacs will be able to pack more in, but remember we're looking for more than just evidence that you can think in binary. A good program must first of all have a good idea behind it, and that'll come across even it it's written in Basic.

WHO'S THERE?

Over the next six months we'll be picking out and publishing the best six programs from all of those you send in. And then we're handing them over to your fellow **YS** readers. We'll be asking them to cast their votes on behalf of the one that they consider to be the overall supreme Spectrum program.

To be voted the best of the best by **Your Spectrum** readers is quite some achievement — we all know how critical you lot can be! And as well as the recognition there'll also be a hefty lump sum waiting to be picked up by each of the six published programmers. But for the top programmer we're offering the chance to have his work marketed by a major software house. More news in the next month as the details are finalised. Watch this space!

So what are you waiting for? If your masterpiece is ready now, don't hang about, send it off to us straight away. If not, you'd better get cracking at the keyboard as we'll be printing the first program in the August issue. A chance like this may never come your way again. Even if you don't make it to the top six, you may still get into print as we'll be letting Gavin take a look at all the programs for Program Power. The address to send your software to is Opportunity Knocks, **Your Spectrum**, 14 Rathbone Place, London W1P 1DE.

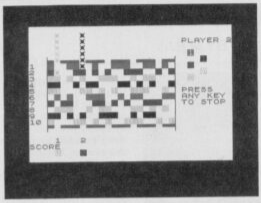

Of course, if you still intend to let this opportunity pass you by, you're not going to be left out. It's your votes that'll decide who becomes the **Your Spectrum Supreme Programmer** so be prepared to start typing those programs in. Go for it!

PROGRAM POWER

Something for everyone in this month's Program Power. Arcade addicts'll go headlong for the Gold Rush and Shooting Gallery, *and all you clever clogs'll want to* Drop Out *and* Tascount *is one utility that'll have you out for the count! Get those program's powered up.*

DROP OUT

BY B HERIVEL AND M RAPPS

Here's a game that's going to get the old grey matter on the move. Once you've got it sussed though, it'll provide hours of friendly and not so friendly competition.

Here's a clever little program for all you clever Speccy owners out there! The game's designed for 2-5 players and the more of you there are the better the game. The aim is to get six of your counters through the maze-box by moving the sectors of the box to left and right. This clears a path for your counters to drop down. Remember, you're not alone — your opponents will be out to stop you so prepare for some hot competition. All you have to do to destroy one of your opponent's pieces is to land on it. Simple, eh? Just you try it.

Your turn to move a section comes when the computer has rolled five dice. The number of moves you can make to each of the ten sections hangs on the throw of the dice. If you haven't quite followed all that don't worry the instructions are also in the game so you can play and learn at the same time. You're going to need a lot of concentration and some quick thinking to play the game. So, drop in and Drop Out!

GOLD RUSH

BY M RAI

This is one platform that'll have you cursing the platforms. They're not only one way but they're constantly on the move. Time it wrongly and a cross marks the spot where you plunged to your death. The rewards are worth it though — lots of gold and unlimited fun.

Pack up your pick, mosey on down to your mule and join the Gold Rush. Specman is on the level again in a great new platform game. All he has to do is collect the money bags scattered around the screen and then take them to the bottom to pay for the gold. Sounds a doddle? Don't be too sure. Once he gets to the bottom of the screen you have to remember the sum of all that loot he's collected. And he's got to traverse the platforms without plunging towards painful oblivion.

The control keys you'll need to know are 7-Up, 6-Down, 5-Left and 8-Right. Oh, and one last thing, you've only got 130 steps to reach your target. This one's pure gold!

```

TASCOUNT

BY MALCOLM PAKNADEL

Tasword II's a great word processing package but it would be even better with a word count routine. Well, now it's got one — Tascount and it only takes up 60 bytes.

Tascount searches for any character preceded by a space, a graphic character, or a new line and treats this as a new word. It also takes into account right justification and hyphenated words.

To enter the code, first type in the Basic loader program. When RUN, you'll be prompted for a sequence of five numbers followed by a checksum. If your checksum is wrong you'll be given a second chance. The machine code will be saved as a file called "count".

Load Tasword as normal and then exit into Basic. Next you've got to edit lines 10 and 25 as directed. Now type 'LOAD "count" CODE', and load up the machine code. Tascount's now incorporated into Tasword and the only difference you'll notice is the word count and text file size in lines and bytes at the foot of the screen. All you've got to do is press 'STOP' to exit from the text file and wait just two seconds. And we got that time on a 19K file — not bad, eh?

Of course, you can always make your own amendments so that Tascount adds just what you want to Tasword. For example, if you're using a shorter text file size, say with TASPRINT, then change the 205 in line 12 of the machine code dump to the highest page boundary that'll completely enclose the text file. So, if the text file ends at address END, change 205 to INT(END/256+1).

You can count on *YS* readers to come up with the best software ideas!

```
 10 FOR a=58420 TO 58484 STEP 5
 20 LET cs=0
 30 PRINT AT 21,0;a;": ";
 40 FOR i=1 TO 4
 50 INPUT x
 60 LET cs=cs+x
 70 POKE a+i,x
 80 PRINT x;",";
 90 NEXT i
100 INPUT "checksum: ";cs2
110 IF cs2<>cs THEN  PRINT AT 21,0; FLASH 1;
"ERROR": BEEP 1,0: PRINT ;21,0,,: GO TO 20
120 RANDOMIZE USR 3280: RANDOMIZE USR 3280
130 NEXT a
140 SAVE "count"CODE 58420,62
```

This is the machine code loader program.

ADDRESS	DATA	CHECKSUM
58420:	33,0,125,1,0	159
58425:	0,89,125,230,63	507
58430:	194,72,228,62,2	558
58435:	163,194,72,228,95	752
58440:	126,254,33,56,9	478
58445:	254,45,40,12,254	605
58450:	128,218,98,228,123	795
58455:	230,2,95,195,106	628
58460:	228,203,35,195,106	767
58465:	228,123,30,1,167	549
58470:	194,106,228,3,35	566
58475:	124,254,205,194,59	836
58480:	228,201,201,201,201	1032

This is the machine code dump. If you don't want to have graphic characters as delimiters, change the 128 in line 7 of the machine code dump to a 255 and add 127 to the checksum value at the end of the line.

```
 10 CLS : LET a=USR 64330: LET wc=USR 58420:
GO TO 20

 25 PRINT AT 0;"WORDS=";wc;TAB 11;"LINES=";INT
 (a/PEEK 62237+.5);TAB 21;"BYTES=";a: GO SUB
4000: PRINT AT 4,0;"print text file
      p"
```

These are the alterations you have to make to Tasword so that it can give you the word count option.

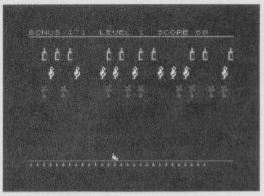

SHOOTING GALLERY

BY ADAM LEONARD

Have a crack at the greatest shooting gallery in the fairground.

If you've never played it before, you're in for a treat. Just shoot the rows of bottles, ducks and cherries with the pellets shown at the bottom of the screen. And make sure you get them all before your time runs out! And watch out for the number '5' flying across the top of the screen amongst the bottles, bag it and you'll have another five pellets to play with. OK, so its not gonna tax the old grey matter but then we can't all be Einsteins — and it's, oh so, addictive.

Your air rifle's controlled with the following keys; Q to move right, W to move left and P to fire a pellet. Go on, shoot 'em up!

OK, so it's not the most original game in the world. But it's often the straightforward shoot 'em ups that keep you coming back for more! This one will.

```

At YS, we try to give you some of the best programs you'll find printed anywhere. But we don't write them — *you* do.

So, fill in the form below and send it with your red hot program to Gavin Monk, Program Power, *Your Spectrum*, 14 Rathbone Place, London W1P 1DE.

100% PROOF

I realise that Program Power is my passport to fame and fortune. That's why I'm rushing you my 100% machine compatible megaprogram. It's so brilliant, in fact, that all my friends call me Matthew Smith though my real name is . . .

Name .....

Address .....

..... Postcode .....

Telephone number .....

My program's called .....

I also realise that if my game is not completely original or I've blagged it from another mag, YS will ruin my reputation and reduce me to rags.

Signed .....

d Screen Machine.

If you're a 48K Spectrum owner, PAINTPLUS and SCREEN MACHINE can transform your graphics expertise in seconds!

Just take a look at some of the things that are possible with a little practice!

YES they were all produced on a ZX Spectrum with no modification and using PAINTPLUS and SCREEN MACHINE.

These two packages are incredible . . . PAINTPLUS is a complete upgrade of our previous program Print'n'Plotter Paintbox but with more than 24 new commands and facilities to give you every possible graphic tool.

Some of the new commands are BOX DRAW, ENLARGE TO EDIT, PAPER WASH MODE, UDG GRABBING FROM SCREEN, AUTOMATIC MULTIPLE SCREEN FILES AND UDG BANKS ORGANISER and PAINT ROUTINES IN 5 PATTERNS AVAILABLE IN BOTH NORMAL AND OVER MODE!

SCREEN MACHINE allows you to take the results from PAINTPLUS and manipulate to save memory, recolour, enlarge and reduce, flip and relocate etc.

There's even a complete compiler for text!

Both programs now come with a copy of our 100 page colour book: PRINT'N'PLOTTER PICTURE BOOK and of course a fantastic Demo on side two of the cassette.

Everything is completely Microdrive compatible and easy to transfer to cartridge.

So if you want to produce superb graphics on your 48K Spectrum and you want to do it simply . . . simply send for a copy of PAINTPLUS and SCREEN MACHINE today or ask at your local computer shop.

Now with 100 page Print'n'Plotter Picture Book Full of Hints, Tips, Programs, Instructions and Colour Illustrations!

LETTA-HEAD
for the 48k Spectrum

An ENTIRELY ORIGINAL utility program to design and print your own business letterheads, orders, receipts, personal stationery, labels and posters.
★ 5 different type faces.
★ Proportional spacing.
★ Variable character width & height.
★ Block scroll, inverse & erase.
★ Variable thickness box function.
★ Graphics mode for your logo design.
★ Special cassette label option.
★ Many more features!

Drives Epson type printers (inc. Star, M-T, Shinwa etc.) via most interfaces (IF1, Hilderbay, Kempston, Kempston E, Tasman, Morex, Wafadrive).

Price: £7.50 on cassette, £9.50 on cartridge, or SAE for further details & additional interface compatibility from:

Bradway Software (YS), 33 Conalan Ave., Sheffield, S. Yorks., S17 4PG

SPECTRUM KOPYKAT
Version 3

Simply the best. Copying any 16/48K Spectrum program is now as easy as LOADing and SAVEing your own program.
Even unstoppable programs can now be backed up on to a fresh tape.

NEW FEATURES
★ Continuous LOADing – Multipart programs copied in one go ★
★ 65400+ byte programs backed up easily ★
★ Repeat Copies ★
★ plus much, much more. ★
For 16/48K Spectrum only £4.95

MICRODRIVE KOPYKAT

Transfer your cassette software onto Microdrive simply and easily.
★ Automatically relocates machine code programs ★
★ Stops and reveals BASIC programs ★
ESSENTIAL UTILITY FOR MICRODRIVE TRANSFER
For 16/48K Spectrum only £4.95

Both programs include FREE Header Reader program.
Despatched by First Class return of post.

MEDSOFT
Dept YS, PO Box 84, Basingstoke, Hampshire, RG25 2LW.

Epson/Spectrum Printer Format

This is a menu-driven program that will save you scrambling through the manuals every time you set up the printer for something special.
On-screen flags show the printer status and in many cases a single key press is all that is needed to swtich modes.
A full analysis is provided to enable you to customise the program even if your knowledge of Basic is incomplete.
S.A.E. for details, or £3.00 brings you this handy utility.

FAST REPAIRS AND BARGAINS

First company in all UK. to introduce while-u-wait service. Now first to offer international repair service.

I have come across a firm that will be more than willing to advise you as to how to remedy your problem. They are called MANCOMP, and as well as repairing your Spectrums, are also quite willing to discuss your problems with you, and offer reasonably cheap, and **(more importantly)** correct cures

PHIL ROGERS 'Peek & Poke' 'POPULAR COMPUTING WEEKLY' January 1985 (Vol IV No 1).

"Prompt ... reasonably priced ... delighted" C. TOWNEND (KEIGHLEY)

"Thanks for your speedy service" L. J. TONKS (PRESTON)

"Your service still remains first class" J. BOURNE (BEXHILL-ON-SEA)

"I only posted it on Tuesday and received it back on Thursday ... two days later! I've never had such service" K. L. CAIRNS (LEEDS)

"Thank you for your excellent service" A. WALLACE (BEDLINGTON)

"Excellent and quick" B. P. ANDERTON (MAIDSTONE)

"Fast service ... not too pricey!" J. TANT (WOKINGHAM)

HACK-FREE ZONE

Are you hacked off with hackers? Would you have trouble hacking your own hands off? You couldn't even POKE yourself in the eye! If you play games but don't play about with them, this is the page for you. What you'll find is everything for the pure games player. So, c'mon play the game!

There are some games that are so incredibly difficult it seems impossible that anyone could have completed them. Well, not without POKEs for this and POKEs for that until there's very little left of the original game! But we have a great deal of faith in the *YS* readership. If you've finished a game just by playing it and you're the only one you know who has, then tell us and we'll tell the world. Let's show the hackers that it can be done without rummaging around in the code.

For starters, has anyone finished *Alien 8* yet, or *Knightlore* or *Starion* or *Wriggler* or *Dragontorc* ... The list is endless, so add to it as you choose. All we ask is that you've done it without POKEs or really there's no point. Sure, use them to practise tactics and pick up tips but make sure you do the final run through without.

Course, if you have cracked a game without hacking it, you're gonna be pretty hot on the ol' hints 'n' tips. No-one's going to get round *Knightlore* without knowing just about everything there is to know on it. That's why we're asking for your expert advice as well. Tell us how it's done, what score you got and everything else of interest — help others to do what you've done and stop them from drifting off to join the mighty hordes of hackers. It's your duty as a games*player*!

So, fill in the coupon below and send it to **Nothing's Impossible, Your Spectrum, 14 Rathbone Place, London W1P 1DE.** Bung in a passport size piccy as well — we want to see what someone that good looks like! And finally, get someone who's seen you do it to sign the form as a verification.

Oh, and one last thing, we only want to hear from those of you who *haven't* finished *Jet Set Willy*. (*Now that is impossible! Ed.*)

I've done it! Though everyone said it was impossible, I finished the following game(s) and there wasn't a POKE in sight.

.....

My name is .....

Address .....

.....

..... Postcode .....

Here are some of my hints 'n' tips:

.....

.....

.....

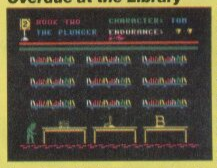

.....

It's all true. With my own eyes I saw him/her do it.
Signed .....

JOIN THE GANG

... In Everyone's A Wally from Mikro-Gen. If Wally Week and the rest of the gang are ever going to have a holiday, they've got to find the combination to the safe and earn some money. We join them after they've repaired the fountain and the pylon on the trail of the letter K.

Overdue at the Library

Wally: Rightio then, let's get cracking.
Wilma Week, Wally's wife: OK, Wally I'm just nipping off to the library to exchange my book for the jump leads.
Wally: Make sure you've got Book 1, Wilma, or you'll be wasting your time. And don't forget to leave the leads somewhere easy for Harry to find before some other dolt comes and picks them up.

Fill 'er up!

Harry the Hippy: Hey, wow, like heaveee man.
Tom the Punk: Course it's heavy, you great hairy half-wit. It's a fork-lift battery. Let me get it down, you flower-powered fool.
With a swift headbang to the battery, Tom lifts it out of the fork-lift and hands it to Harry who carts it off to the Petrol Station.
Harry (*in a really heavy scene*): Hey, I hope I've got everything man. I've got the battery and the jump leads so I'd better change it up before lugging it all the way back to Tom. Hey, this is really bad Karma!
Tom: 'Bout time too, I was just gonna stick a pin in ya to see if you'd died.
Harry: Funneee. I kept tripping over my flares, that's all!

Building Sighs.

Wally (*whistling while he works*): It's off to work we go ... Take the bucket to the fountain and fill it, done that, get the sand and off to the cement mixer to swop it with the cement. Now where is the cement mixer?
Dick (*from the depths — well, he is a plumber*): Er, it's by the tool room, Wally, Ner, what a wally, not knowing that!
Wally: I 'eard that. Rightio, where's my trowel. Oh, yes. Better go and build the wall at the building site. At least it's the easiest bit of building I'll ever do — walk past it and, hey presto, it's there.
Harry: Hey, Wally, I've fixed the fork-lift, man. Like crazeee. If you come and stand on the front you can walk along the wall.
Wally: Okey Dokey, and I can swop the cement for the letter K and, bob's yer uncle.

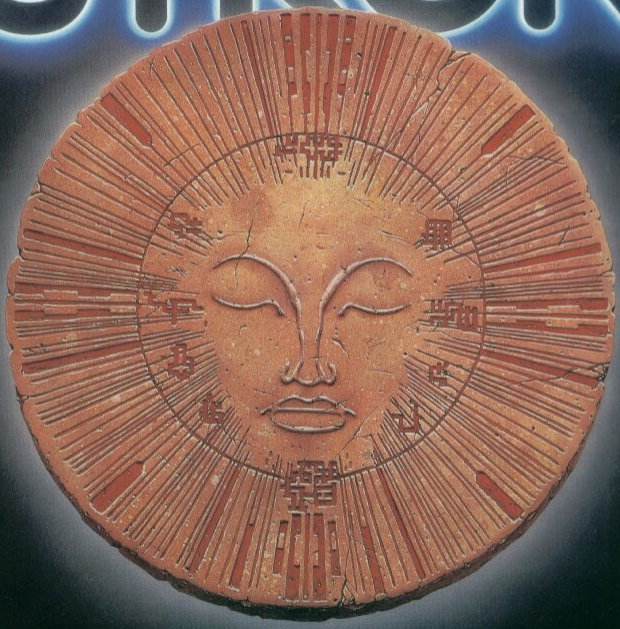

And so we leave them. S'pose it's always possible that they'll get on their hols but there are still four more letters to collect, so it won't be till next winter!

GOLD EDITION
48K SPECTRUM · £9

Opus. DISCOVERY 1

The Dawn of a new beginning for your Spectrum

Introducing Discovery 1 – quite simply the most advanced and comprehensive disc drive unit yet developed for the Spectrum and Spectrum + computers.

Discovery is the breakthrough in design, performance and price which promises to make other Spectrum solutions obsolete. Just look at its advanced features:

- The very latest 3½ inch disc drive unit
- Peripheral through connector
- Parallel printer port
- Joystick interface
- Video monitor port
- On-board power supply

But the biggest discovery of all is the price – just £199.95

Upgrading to a dual-drive system is simple with the 'Discovery +' upgrade package – £139.95, or choose a purpose-built twin-drive unit, 'Discovery 2' – £329.95.

THE DISCOVERY RANGE

- Available through the Opus dealer network nationwide – ring for your nearest stockist – or direct from Opus Supplies. For further details ring us on: 0737 65080 or post the coupon.

Please rush me the following (ALL PRICES INCLUDE VAT & CARRIAGE)
– Discovery 1 unit(s) at £199.95 each
– Discovery 2 unit(s) at £329.95 each
